Multimedia Matrix Switcher

Important Safety Instructions

Class I Apparatus Construction.

This equipment must be used with a mains power system with a protective earth connection. The third (earth) pin is a safety feature, do not bypass or disable it. The equipment should be operated only from the power source indicated on the product.

To disconnect the equipment safely from power, remove the power cord from the rear of the equipment, or from the power source. The MAINS plug is used as the disconnect device, the disconnect device shall remain readily operable.

There are no user-serviceable parts inside of the unit. Removal of the cover will expose dangerous voltages. To avoid personal injury, do not remove the cover. Do not operate the unit without the cover installed.

The appliance must be safely connected to multimedia systems. Follow instructions described in this manual.

CAUTION	AVIS
RISK OF ELECTRIC SHOCK DO NOT OPEN RISQUE DE CHOC ELECTRIQUE NE PAS OUVRIR	
Replacing the AC fuse

Unplug the AC power cord from the device. Locate the AC fuse on the rear panel. Replace only the AC fuse as indicated on the rear panel. Connect the power cord to the switcher and to the AC power source. Make sure the switcher is working properly.

Ventilation

For the correct ventilation and to avoid overheating ensure enough free space around the appliance. Do not cover the appliance, let the ventilation holes free and never block or bypass the ventilators (if any).

WARNING

To prevent injury, the apparatus is recommended to securely attach to the floor/wall or mount in accordance with the installation instructions. The apparatus shall not be exposed to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the apparatus. No naked flame sources, such as lighted candles, should be placed on the apparatus.

Waste Electrical & Electronic Equipment WEEE

This marking shown on the product or its literature, indicates that it should not be disposed with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources. Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take this item for environmentally safe recycling. Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.

Common Safety Symbols

Symbol	Description
∼	Alternating current
⏚	Protective conductor terminal

⚠	Caution

Symbol Legend

The following symbols and markings are used in the document:

WARNING! Safety-related information which is highly recommended to read and keep in every case!

ATTENTION! Useful information to perform a successful procedure; it is recommended to read.

DIFFERENCE! Feature or function that is available with a specific firmware/hardware version or product variant.

INFO: A notice which may contain additional information. Procedure can be successful without reading it.

DEFINITION: The short description of a feature or a function.

TIPS AND TRICKS: Ideas which you may have not known yet but can be useful.

Navigation Buttons

Go back to the previous page. If you clicked on a link previously, you can go back to the source page by clicking the button.

Navigate to the Table of Contents.

Step back one page.

Step forward to the next page.

Document Information

All presented functions refer to the indicated products. The descriptions have been made during testing these functions in accordance with the indicated Hardware/Firmware/Software environment:

Item	Version
Lightware Device Controller (LDC) software	1.31.0.b1
Lightware Device Updater (LDU2) software	1.2.5b2
Controller firmware	v1.4.2b11

Document revision: **2.8**

Release date: 31-07-2019

Editor: Judit Barsony

About Printing

Lightware Visual Engineering supports green technologies and eco-friend mentality. Thus, this document is made for digital usage primarily. If you need to print out few pages for any reason, follow the recommended printing settings:

- Page size: A4
- Output size: Fit to page or Match page size
- Orientation: Landscape

TIPS AND TRICKS: Thanks to the size of the original page, the border around the content (grey on the second picture below) makes possible to organize the pages better. After punching the printed pages, they can be placed easily into a ring folder.

Introduction

Thank you for choosing Lightware Matrix Routers. The MX2-HDMI20 is the first Lightware HDMI2.0 standalone matrix switcher family that supports uncompressed 4K UHD resolution at 60Hz 4:4:4. Thanks to its compact size and silent design, it is particularly suitable for offices and meeting rooms, for 4K live events, and for future-proof operation centers. In the first chapter we would like to introduce the device highlighting the most important features in the below listed sections:

- ▸ DESCRIPTION
- ▸ BOX CONTENTS
- ▸ FEATURES OF THE DEVICES
- ▸ TYPICAL APPLICATIONS
- ▸ MODEL COMPARISON

1.1. Description

The MX2-HDMI20 series is the Lightware HDMI 2.0 standalone matrix switcher family that supports uncompromised 4K UHD resolution at 60Hz 4:4:4 and allows de-embedding audio from and embedding audio to the HDMI stream. It has an outstanding port density that makes it particularly suitable for rental and fix install applications, as well as for future-proof operation centers. It is a perfect choice for installations where HDMI 2.0 compliant input and output ports are required.

This flagship product has HDMI2.0 inputs and HDMI2.0 outputs transmitting up to 4K at 60Hz in 4:4:4 format, while supporting 3D, Dolby TrueHD, and DTS-HD Master Audio. Each input port has audio connectors for embedding analog audio into the HDMI stream. Likewise, the audio connectors next to the output ports can provide de-embedded audio * for amplifiers and audio systems.

MX2 matrix switchers are available with 16x16 and 24x24 crosspoint sizes, with or without analog audio add-ons, and some versions are also available with redundant power sources, paired with rugged power connectors and reinforced control ports. All models feature a front panel, color LCD screen with great visibility, and a jog-dial, multi-function button, enabling the users to manage every device feature and service directly.

Further product variants have been developed to better serve various target application requirements, in 8x8, 8x4 and 4x4 crosspoint sizes. The new compact variants are excellent choices for not only Rental & Staging, but also for various corporate and other collaborative environments.

* Please note that only stereo LPCM can be de-embedded from the HDMI signal.

About the Serial Number
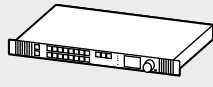

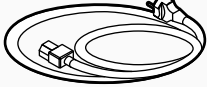

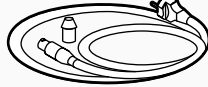

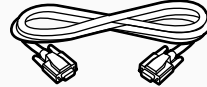

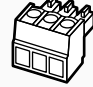

Lightware devices contain a label indicating the unique serial number of the product. The structure is the following:

Year of the manufacturing (3-9, A-Y):
7=2017, 8=2018, 9=2019, A=2020, etc...

7A000941 — 6-digit running sequence number

Month of the manufacturing (1-9, A-C):
1=January, 2=February, ..., C=December

Model Denomination

Digital audio embedding and de-embedding function

Number of the outputs
Number of the inputs

HDMI 2.0 compatible

MX2-16x16-DH-8DPi-A-R

New generation of Lightware matrix switchers

DisplayPort 1.2 compatible

Redundant power supply

8 pcs Displayport input

1.3. Features of the Devices
Maximum A/V Compatibility

The matrix is compatible with the latest HDMI 2.0 standard as well as with HDMI 1.x and DVI 1.0 standards.

4K Video without Compression

HDMI 2.0 signal switching with 4k@60Hz and RGB 4:4:4 color space, 18 Gbit/sec bandwidth.

HDCP Compliant

MX2-HDMI20 matrix switchers fulfill the HDCP standard. HDCP capability on the HDMI inputs can be disabled when non-protected content is extended.

Audio Embedding and De-embedding

In the **-A** or **-Audio** suffixed models, each input port has audio connectors for embedding analog audio to the HDMI stream. Likewise, the audio connectors next to the output ports can provide de-embedded audio for amplifiers and audio systems.

Advanced EDID Management

The user can emulate any EDID on the inputs independently, read out and store any attached monitor's EDID in 100 internal memory locations, upload and download EDID files using Lightware Device Controller software.

Pixel Accurate Reclocking

Each output has a clean, jitter free signal, eliminating signal instability and distortion caused by long cables or connector reflections.

Frame Detector and Signal Analysis

The exact video and audio signal format can be determined such as timing, frequencies, scan mode, HDCP encryption, color range, color space and audio sample rate.

Graphic Display and Rotary Jog Dial Control Knob

Easy setting and menu navigation are assured by the color graphic display and the comfortable jog dial control.

HDMI 2.0 to 2x HDMI 1.4 Splitting

The device supports vertical splitting of an HDMI2.0 4k@60Hz 4:4:4 input signal to left and right halves allowing for the transmission of an 18 Gbps HDMI 2.0 signal over two HDMI1.4 compliant links. The two halves can then be recombined at the signal destination.

Unique Front-to-Back Cooling Airflow Design

The matrix includes a groundbreaking new cooling design with front-to-back airflow. Inside the chassis, the airflow travels along guiding panes assuring that the most warm areas receive ample amount of cooling air volume.

Ethernet Control

Multiple simultaneous TCP/IP connections are available with a simple ASCII-based protocol for controlling, configuring the matrix router or perform a firmware upgrade.

Non-Volatile Memory

The matrix router starts with its latest configuration settings when powered on or after a power failure. Every setting is stored in a non-volatile memory.

Consumer Electronic Control

Supports transmitting standard CEC commands in order to remote control the source or sink device.

1.4. Typical Applications

The following figures show different modes of the application:

Analog audio

* MX2-16x16-HDMI20-Audio-R has 4 pcs independent analog audio output ports. The other 4 pcs can de-embed the audio from the HDMI signal which is switched the HDMI output port beside.

2

Installation

The chapter is about the installation of the device and connecting to other appliances, presenting also the mounting options and further assembly steps.

- ▶ Mounting Options
- ▶ Connecting Steps

2.1. Mounting Options

The matrix can be mounted in several ways by the supplied two rack ears. Allen head screws fix them to the housing:
> **WARNING! M4x8 size is the longest allowed screw for fixing the ears to the housing. A longer screw may touch internal parts.**

> INFO: The method is the same when the matrix would be mounted to a wall.

Standard Rack Installation (Default)

> INFO: All models can be mount into the rack cabinet.

Two rack ears are supplied with the product, which are fixed on left and right side as shown in the picture. The default position allows mounting the device as a standard rack unit installation.
> **ATTENTION!** Always use all the four screws for fixing the rack shelf ears to the rack rail. Choose properly sized screws for mounting. Keep minimum two thread left after the nut screw.

Mounting with Front and Rear Rack Ears

> **DIFFERENCE!** Under-desk mounting is available for the 1U-high models.

> **ATTENTION!** Two rack ears are assembled on the matrix as default, thus, you will need two more rack ears for this kind of installation, which can be purchased separately.

The matrix can be easily mounted under the desk by rack ears. This mounting option means **the top of the matrix is parallel with the base surface**. Please do the following steps:

Step 1. Release and remove the fixing screws of the rack ears on the matrix (both sides).

Step 2. Rotate the rack ears by 90° to the desired direction.

Step 3. Insert the screws into the holes and fix the front ears to the matrix.

Step 4. Fix the two additional rear ears (not supplied with the product) by the screws on both sides of the matrix.

Step 5. Fix the matrix through the holes of the rack ears to the desired surface (screws are not supplied).

2.2. Connecting Steps

4K PC

Media player

Power outlet

HDMI   **HDMI**   **Power**

Audio   **HDMI**   **LAN**

Audio amplifier   4K projector   Ethernet   Touch control
HDMI Connect the desired sources to the **HDMI input ports**.

Audio Optionally connect an audio source to the **Audio input port** which is located next to the connected HDMI input port.

HDMI Connect the sink devices to the **HDMI output ports**.

Audio Optionally connect an audio device (e.g. audio amplifier) to the **Phoenix Audio output port** which is located next to the connected HDMI output port.

LAN In order to control the matrix via Ethernet, connect the device to a LAN switch/router, and connect a controller (e.g. a Touch panel).

Power Connect the power cord to the AC power socket and to the matrix.

3

Product Overview

The following sections are about the physical structure of the device, input/output ports and connectors:

3.1. Port Diagram
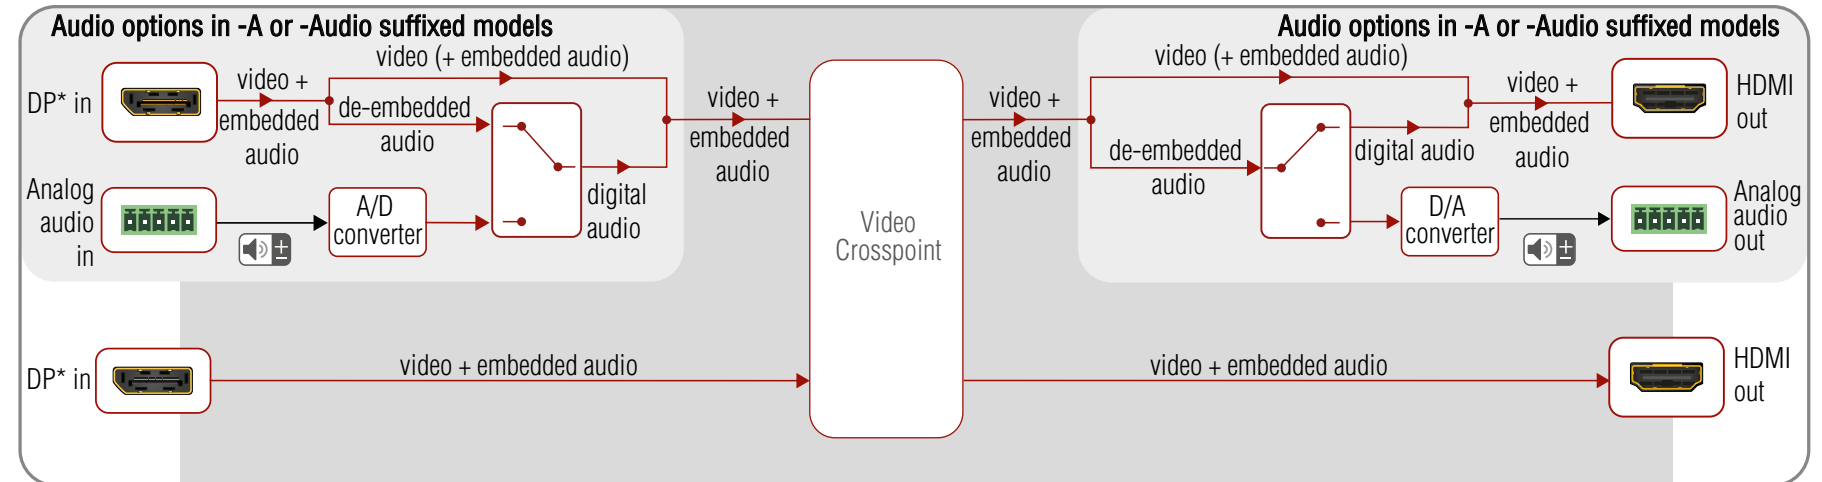

*Video input can be DP or HDMI

DisplayPort Video Options

> **DIFFERENCE!** DisplayPort inputs are available in certain models, **-D** letter the model name refers to that (see the Model Comparison table).

- If the emulated EDID does not support the deep color signal (10, 12-bit), and the incoming video is deep colored, then the video processor converts the signal to 8-bit automatically. The compatible color depths can be checked in the EDID Menu in Lightware Device Controller software.
- The factory default EDID (F49 - 1920x1080p60.00Hz) has deep color support up to the full HD resolution. When the resolution of the incoming video signal is more than the full HD with deep color (e.g. 4K@30Hz with 10-bit or 12-bit), the color depth is reduced to 8-bit.
- If the signal is 4K@30Hz with 10-bit or 12-bit, using F146 EDID (3840x2160@60Hz with deep color support) is highly recommended.
- DisplayPort signals over 18Gbps will be converted down by either truncating bit depth or by converting RGB signal to YCbCr 4:2:2 12-bit signal based on user selection. The second option will not reduce the color depth rather, it results in loss of chroma information.

Analog Audio Options

> **DIFFERENCE!** The **-A** suffix in the model name refers to the analog audio option (for more information about the models, see the Model Comparison table).

- An external audio signal can be embedded in the HDMI stream by the Analog Audio input port. In this case the audio from the analog input port is converted and embedded in the HDMI stream. Furthermore, the Analog audio output ports allow to de-embed the audio of the HDMI output stream. Please note that only stereo LPCM can be de-embedded from the HDMI signal.
- The test pattern generator feature makes possible to transmit the analog audio without any video signal.

3.2. Front View

MX2-24x24-DH-12DPi-A-R
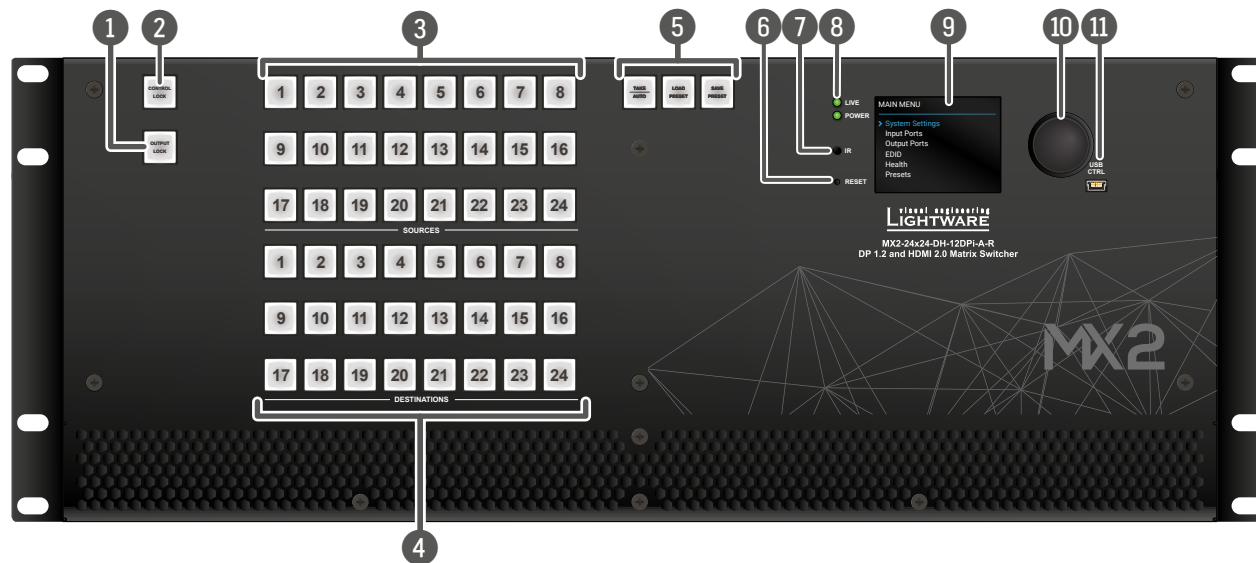

1	**Output Lock ***	Locking one or more outputs.
2	**Control Lock ***	Disable or enable front panel operations. Red light means the switching and function buttons are disabled.
3	**Sources ***	Buttons to select an input, to select a preset number or to view the state of the selected input port.
4	**Destinations ***	Buttons to select an output or to view the state of an output.
5	**Function Buttons ***	Switching between working modes (Take / Autotake) and performing Preset operations.
6	**Reset Button**	Reboots the matrix (the same as disconnecting from the power source and reconnecting again).
7	**IR Detector**	Reserved for future developments.
8	**LIVE LED**	☀ blinking slow The unit is on and operates properly.
	POWER LED	● on POWER LED indicates that the unit is powered on.
		○ off The unit is powered off or it has internal voltage problem.
9	**Color Display**	LCD screen showing the most important settings and parameters in the front panel menu.
10	**Jog Dial Control Knob**	Easy setting and menu navigation by the jog dial control. Keep dial and click while getting feedback on the LCD.
11	**USB Control**	USB connector for local control functions (e.g. Lightware Device Controller software).

* All models have front panel LCD and jog dial knob on the front, but some models are not supplied with front panel buttons. See the details about the difference in the models in the Model Comparison table.

3.3. Rear View

MX2-24x24-DH-12DPi-A-R
❶	**RS-232 Port**	▪ **-R** suffixed models: 9-pole D-SUB connector.
		▪ Other models: 3-pole Phoenix connector.
❷	**LAN Port**	▪ **-R** suffixed models: Neutrik etherCON connector for Ethernet/LAN connection.
		▪ Other models: RJ45 connector to control the matrix via LAN/Ethernet.
❸	**Input Ports**	**HDMI input ports** are able to receive HDMI 2.0 video signal.
		-D in the model name refers that the matrix has a DisplayPort input connector for accepting DP1.2 video signal. See the details about the difference in the models in the Model Comparison table.
		Audio input ports (5-pole Phoenix) for balanced analog audio input signal (in **-A** suffixed models).
❹	**Output Ports**	**HDMI output ports** for connecting sink devices.
		Audio output ports (5-pole Phoenix) for balanced analog audio output signal. The signal is de-embedded from the given HDMI port (in **-A** suffixed models).
❺	**Power Switch**	▪ The matrix can be switched on/off by the power switch.
		▪ The 1U-high matrix switchers are not supplied with a power switch.
❻	**AC Connector**	▪ **-R** suffixed models: two Neutrik powerCON connector accepting 100-240 V, 50 or 60 Hz. For more details about the redundant supply see Powering On section.
		▪ In the other models: Standard IEC connector accepting 100-240 V, 50 or 60 Hz.
❼	**Service Button**	Hidden button for special operations.

3.4. Electrical Connections

3.4.1. HDMI Connector

The matrix switchers are assembled with standard 19-pole HDMI connectors for inputs and outputs. The outputs are able to supply 500 mA current on DDC +5V output (pin 18) which is sufficient to supply power to certain devices (e.g. DA2-HDMI-4K-Plus-A).

3.4.2. DisplayPort Connector

DIFFERENCE! Certain models provide standard 20-pole DisplayPort connector for input. See the details in the Model Comparison table.

DisplayPort input ports are capable of providing about 1.5 W (500 mA @ 3.3V) power on the DP_PWR pin. Always use high quality DP cable for connecting DisplayPort devices!

3.4.3. Symmetrical Analog Stereo Audio

DIFFERENCE! Certain models use this connector as an analog audio input or output. See the details about it in the Model Comparison table.

5-pole Phoenix connector is used for balanced analog audio (line in/out). Unbalanced audio signals can be connected as well. For asymmetrical output, connect only + and ground. For asymmetrical input connect + and ground to the source and connect – to the ground.

Compatible Plug Type

Phoenix® Combicon series (3.5mm pitch), type: MC 1.5/5-ST-3.5.

Pin nr.	Signal
1	Left +
2	Left -
3	Ground
4	Right -
5	Right +
See more information about the most common audio cable wiring modes in Audio Cable Wiring Guide section.

3.4.4. RS-232 Port

3-pole Phoenix Connector

DIFFERENCE! Certain models are supplied with 3-pole Phoenix connector for RS-232 communication.

Compatible Plug Type

Phoenix® Combicon series (3.5mm pitch, 3-pole), type: MC 1.5/3-ST-3.5.

Pin nr.	Signal
1	Ground
2	Tx data
3	Rx data
D-SUB Connector

DIFFERENCE! The **-R** suffixed models have female D-SUB connector for RS-232 data communication.
D-SUB connector pin assignment for standard RS-232	
Pin nr.	**Pinout**
1	NC - non-connected
2	**TX data transmit (output)**
3	**RX data receive (input)**
4	DTR (Internally connected to Pin 6)
5	GND signal ground (shield)
6	DSR (Internally connected to Pin 4)
7	RTS (Internally connected to Pin 8)
8	CTS (Internally connected to Pin 7)
9	NC - non-connected

INFO: MX2-HDMI20 series matrix switchers are DCE unit according to its pin-out. For more information see Serial Management section.

Factory default settings of the serial port: RS-232 enabled; 57600 Baud, Protocol: LW3.

3.4.5. Ethernet (LAN) Port

The matrix can be controlled by Ethernet/LAN connection. The Ethernet port can be connected to a LAN hub, switch or router by a CATx cable. However, both cable types (straight or cross) are supported and handled by the device, below pin assignment is recommended.

Pin	TIA/EIA T568 A	Color and name	TIA/EIA T568 B	Color and name
1		white/green stripe		white/orange stripe
2		green solid		orange solid
3		white/orange stripe		white/green stripe
4		blue solid		blue solid
5		white/blue stripe		white/blue stripe
6		orange solid		green solid
7		white/brown stripe		white/brown stripe
8		brown solid		brown solid

RJ-45 Connector

DIFFERENCE! Certain models are supplied with RJ45 connector for Ethernet communication. See the details in the Model Comparison table.
	LED 1, Amber	LED 2, Green
OFF	10 Mbps	No link
Blinking	N/A	Activity
ON	100 Mbps	Link is active

Neutrik EtherCON Connector

DIFFERENCE! The **-R** suffixed models have D-SUB connector for RS-232 data communication.
3.4.6. USB Connector

MX2-HDMI20 series matrix switchers have standard USB mini-B receptacle.

4

Operation

This chapter is about the powering and operating of the device describing the functions which are available by the front/rear controls:

▶ POWERING ON
▶ FRONT PANEL BUTTONS OPERATIONS
▶ FRONT PANEL LCD MENU OPERATIONS

4.1. Powering On

Connect the power cords to AC input of the Power Supply Units (PSU).

> INFO: The router has an internal emergency memory that stores all current settings and tie configurations. This memory is independent from presets and invisible for the user. This built-in feature helps the system to be ready immediately in case of power failure or accidental power down.

1 RU-high models

The 1 RU-high models are immediately powered on. After the self-test (about 20 seconds), the router reloads its last configuration and it is ready to use.

Other models

Certain models are assembled with power button (see the details in the Model Comparison table).

After switching the power switch to the **ON** position, the router starts up. If the mains' switch is in the **ON** position, then the matrix starts up immediately when the power cord is connected to the AC source. During the initial self-test and loading of the latest settings, **The matrix is about to start** appears on the LCD screen and the router reloads its last configuration.
> INFO: After switching ON, the router reloads the latest settings that were used before it was switched off. The router has an internal emergency memory that stores all current settings and tie configurations.

Redundant Power Supplies

The **-R** suffix in the model name shows that the model has redundant PSUs which can be switched on and off without interrupting the video transmission. Using the only one or both the PSUs at the same time is also possible.

Double PSU allows to connect them for two different AC power lines to ensure the continuous power for the matrix.

4.2. Front Panel Buttons Operations

DIFFERENCE! Some models have buttons on the front side (see the details about it in the Model Comparison table). They have the same functionality, only the numbers of source and destination buttons are different.

Take / Autotake Mode

The router has two different switching modes: **Take** and **Autotake**. If the **Take** button is unlit, **Take** mode is active. When the **Take** button continuously illuminates green, **Autotake** mode is selected. Press and hold the **Take** button for two seconds to change between **Take** and **Autotake** modes.

4.2.1. View Crosspoint State

The current switching status can be checked on the front panel by using the front panel buttons. The crosspoint state is displayed slightly different in **Take** or **Autotake** modes because of the different switching methods.

INFO: View mode does not mean, that the router has to be switched in different modes, viewing and switching can be done after each other, without pressing any special buttons.

View Current State in Take Mode

If the router is in **Take** mode, the user can verify both input and output connections. In **Take** mode no accidental change can be done unless **Take** button is pressed.

Press and release a **source button**. Now the selected source button and all destination buttons which are currently connected to the selected source will light up. This informative display will remain active for three seconds, then all buttons turn to dark.

Sample drawing shows that Input 1 is currently connected to the Output 2, 3, and 5 ports.

If every source, destination, and **Take** buttons are unlit (the unit is in **Take** mode, and no input was selected in the last 3 seconds), press and release a **destination button** to see its current state. Now the source button, which is connected to the selected destination, will light up.

Sample drawing shows that Output 3 is connected to the Input 1.

View Current State in Autotake Mode

In **Autotake** mode only states of destinations can be viewed.

Press and release the required **destination button**. Now the source button, which is connected to the selected destination, will light up.

4.2.2. Switching Operations

Switching in Take Mode

Take mode allows the user to connect or disconnect multiple outputs to an input at once. This mode is useful when the time delay is not allowed between multiple switching. The commands are only realized when the **Take** button is pressed.

Step 1. First, press and release the desired **source button**. The pressed source button and all destination buttons which are currently connected to the source lights up.

Step 2. Press and release the desired **destination buttons** which have to be (dis)connected to/from the selected source. The preselected destination buttons will blink. If no button is pressed for three seconds, the buttons will turn to dark.

Step 3. Press and release **Take** button; the selected input is switched to the selected output(s).

Switching in Autotake Mode

Autotake mode is useful when immediate actions must be done or fast switching is needed between sources on a particular destination. In this mode switching occurs immediately upon pressing one of the input selector buttons.

Step 1. Press and release the desired **destination button**. The pressed destination button and the actually connected source button light up green. If no source is connected (the output is muted) no source button will light up.

Step 2. Press and release the desired **source button**. The switch action will be executed immediately. Switching between sources to the selected destination can be done directly.

4.2.3. Output Lock

> **ATTENTION!** However, the front panel buttons allow to lock only the output ports, the input ports can also be locked by using Lightware Device Controller software (see HDMI Inputs section) or sending LW3 protocol command (see Locking an Input Port section).

Using Lightware routers it is possible to lock a destination. This feature prevents an accidental switching to the locked destination in case of an important signal. Locking a destination means that no input selection or muting action can be executed on that particular destination.

Destinations can be independently locked or unlocked. Locking a destination does not affect other destinations.

Output Lock in Take Mode

Step 1. Press and release the **Output Lock** button; it starts to blink and all the buttons of any locked destinations light up (view state).

Step 2. Press and release a **destination button**; it starts to blink (more destinations can be selected sequentially).

Step 3. Press and release **Take** button. The selected destinations are now locked.

Output Lock in Autotake Mode

Step 1. Press and release the required **destination button**. Now the selected destination button and the currently configured source button light up (view mode).

Step 2. Press and release the **Output Lock** button; it lights up in red, and lock function is activated at once. No source can be changed at the locked destination.

4.2.4. Control Lock

Front panel button operation can be enabled or disabled using **Control Lock** button, while the remote control is still enabled. If the button is unlit, front panel button operation is enabled. If the button is continuously illuminated in red the front panel operations are not possible. Press and keep the **Control Lock** button pressed for three seconds to toggle between the control lock states.

4.2.5. Save or Load a Preset

The matrix can store user-programmable presets. Each preset stores a configuration regarding all input connections for all outputs. All presets are stored in a non-volatile memory; the router keeps the presets even in the case of a power down. Please note, that preset operations can be followed on the LCD during front panel preset operations.

> **ATTENTION!** Eight of the memory slots are available by the Source buttons; see the Presets section for the details.

Saving a Preset in Take Mode

Step 1. Press and release **Save Preset** button.

Step 2. Press and release the desired **source (memory address) button** (source 1 to 8).
Step 3. Press and release the **Take** button. Now the current configuration is stored in the selected memory.

ATTENTION! Preset save action always stores the current configuration for all outputs.

Loading a Preset in Take Mode

Step 1. Press and release the **Load preset** button.

Step 2. Press and release the desired **source (memory address) button** (source 1 to 8).

Step 3. Press and release the **Take** button. Now the selected preset is loaded.

Saving a Preset in Autotake Mode

Step 1. Press and release the **Save Preset** button.

Step 2. Press and release the desired source (memory address) button (source 1 to 8). Now the current configuration is stored in the selected memory.

ATTENTION! Preset save action always stores the current configuration for all outputs.

Loading a Preset in Autotake Mode

Step 1. Press and release **Load Preset** button.

Step 2. Press and release the desired source (memory address) button (source 1 to 8). Now the selected preset is loaded.

4.3. Front Panel LCD Menu Operations

The company logo is displayed on the screen during the boot-up. The main menu is displayed after about 30 seconds later and the device is ready to use.
Menu Structure

The front panel has a color LCD that shows the most important settings and parameters structured in a menu. The jog dial control knob can be used to navigate between the menu items or change the value of a parameter. The knob can be pressed to enter a menu or edit/set a parameter.

4.3.1. System Settings Menu

Network Submenu

The parameters of the network connection can be set in this submenu. The first three lines (IP, Subnet, and Gateway parameters) show the current settings. If the DHCP option is disabled, three more parameters are listed which can be set for a static IP address:

- Static IP,
- Static Subnet,
- Static Gateway.

> **ATTENTION!** If you change the network settings, always press the Save option under Network menu (not only in the submenu of the parameter) to apply the new settings.

NETWORK

● IP   192.168.0.97
  Subnet   255.255.255.0
  Gateway   192.168.0.1
  DHCP   Enabled
  Link Status   100 Mbps full-duplex
  MAC   00:14:2d:2b:43:89
« Back   ✔ Save
RS-232 Submenu

Adjustable parameters of the port:
- **Control** (enable/disable the device control),
- **Baud Rate** (9600, 19200, 38400, 57600, 115200),
- **Protocol** (LW2, LW3 or P#2 protocol).

RS-232

« Back   ✔ Save
Display Brightness

The brightness of the LCD can be set from 1 to 10 on a scale.

> **ATTENTION!** The lowest value of the brightness parameter is 1 when setting via the front panel. The setting is available in Lightware Device Controller software as well, but in that case, the lowest value is 0, which means the display is switched off; see Front Panel Tab section.

> INFO: When the matrix is in Standby mode, the display is switched off.

DISPLAY BRIGHTNESS

☼   9   ☼

0 1 2 3 4 5 6 7 8 9 10

« Back   ✔ Save
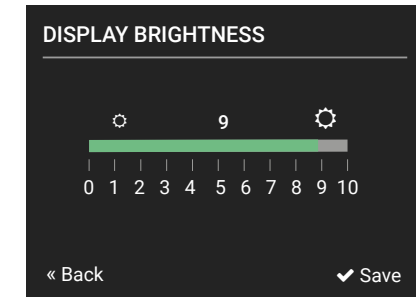

Buzzer

There is a buzzer (beeper) in the matrix which sounds in certain cases (during booting, network or parameter change, etc.). It can be enabled/disabled in this submenu.

Power Redundancy

> **DIFFERENCE!** This submenu appears when the model has a redundant power supply (**-R** suffix in the model name shows this feature).

- PSU1: running / stopped
- PSU2: running / stopped

Device Info

The following information is available in the submenu:

- **Frame Serial Number**,
- **Hardware Versions** of the PCB components,
- **Firmware Versions** of the installed boards.

Enter Standby Mode

The device can be switched to standby mode. In this case, the video transmission is disabled and the LCD is switched off. Remote connections (LAN, RS-232) remain enabled. Press the jog dial button on the front panel to wake up the matrix (or see the related settings in LDC, see Grid View section).

Restore Factory Defaults

The default settings can be reloaded in this submenu, for details see Factory Default Settings.

4.3.2. Input Ports Menu

When entering the menu the available video input ports are listed. The icons display information about the port and the incoming signal (see below table). Select the desired input port and enter to see the submenu.
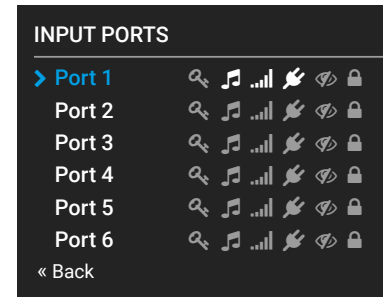

```
INPUT PORTS
❯ Port 1        🔍 🎵 📶 🔌 👁 🔒

  Test pattern         Off
  Conversion           Off
« Back
```
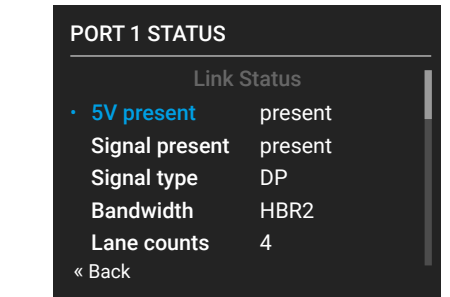

HDCP

The encryption towards the source can be set as follows:

- **Disable HDCP on input**: The connected source will detect that the sink is not HDCP-compliant and turn off authentication if the content allows it.
- **HDCP 1.4 only:** The signal is encrypted with HDCP v1.4
- **Allow HDCP 2.2 or HDCP 1.4:** The connected source will detect that the sink is compliant with HDCP 2.2 (factory default setting).
- **High Value mode**: If the highest level of protection is not justified by the source content, the level may be decreased. (e.g. the signal is encrypted with HDCP 2.2 but can be converted to be encrypted with HDCP v1.4)

See more information about HDCP in HDCP Management section.

Other Settings

- **Max Lane Count** (1, 2, 4): One lane is able transmit 5.4 Gbps data and four lanes are available (maximum 21.6 Gbps data rate). Here can be set the maximum lane number.
- **Max Bandwidth** (RBR, HBR, HBR2): This defines the data speed per lane: RBR uses 1.62Gbps; HBR uses 2.70 Gbps; HBR2 uses 5.40 Gbps.

- **Power enable** (enable / disable): DisplayPort can supply 1.5 W (500 mA, 3.3V) towards the source.
- **Testpattern** (off / on): When the testpattern is enabled, it sends a yellow picture to the output (independently of the active video signal on the selected port).

TIPS AND TRICKS: To enable the testpattern makes possible to transmit the analog audio without any active video signal on the DP input port beside (only in the **-A** or **-Audio** suffixed models).

- **Conversion** (Off / RGB to YUV422 / RGB to YUV420):

  Off means, that the video signal is transmitted without any changing; in case of **YUV422,** the video converter subsamples the 4:4:4 signal to 4:2:2; **YUV420** means, that the he video converter subsamples the 4:4:4 signal to 4:2:0.

  Audio source (Disable / Video / Analog input *): The de-embedded audio can be turned on and off.

* Analog input option appears when there is an analog audio input beside the chosen video port. **-A** or **-Audio** suffix in the model name refers to the analog audio feature.

HDCP

The encryption towards the source can be set as follows:

PORT 13 SETTINGS

❯ HDCP	Disable
Hotplug	AUTO
Audio source	Video

« Back

- **Disable HDCP on input**: The connected source will detect that the sink is not HDCP-compliant and turn off authentication if the content allows it.
- **Allow HDCP 1.4 only *:** The connected source will detect that the matrix is compliant with HDCP 1.4 but not compliant with HDCP 2.2.
- **Allow HDCP 2.2 or HDCP 1.4:** The connected source will detect that the sink is compliant with HDCP 2.2 (factory default setting).
- **High Value mode**: Any version of HDCP is allowed on the input but the incoming signal is converted to HDCP 2.2 level encryption, thus, it cannot be switched to HDCP 1.4 sinks.

See more information about HDCP in HDCP Management section.

*The availability of this setting depends on the hardware version of the input board (V1x_). The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Hotplug

The hotplug signal towards the source can be set to **Auto**, or **Forced Off**.

Audio Source

Source of the embedded audio can be set in this menu:

Disable/ Video /Analog input *

* Analog option appears when there is an analog audio input beside the chosen video port. **-A** or **-Audio** suffix in the model name refers to the analog audio feature.

Analog Audio Submenu

DIFFERENCE! Analog Audio submenu appears when there is an analog audio input beside the chosen video port. **-A** or **-Audio** suffix in the model name refers to the analog audio feature (see the Model Comparison table about the analog audio availability).

ANALOG GAIN

5 dB

-12 -7 -3 2 7 12 16 21 26 30 35
Information about the Analog Audio input and the (HDMI) embedded audio signal is displayed in this submenu.

- **Audio Source**: Disable/ HDMI/ Analog Input
- **Audio Gain**: adjustable from -12 dB to +35 dB,
- **Analog Volume**: adjustable from 0 (-95dB) to 100% (0dB),
- **Analog Balance**: adjustable from -100 % (Left) to + 100% (Right), 0 means the center.

4.3.3. Output Ports Menu

When entering the menu the available video output ports are listed. The icons display information about the port and the outgoing signal (see below table). Select the desired output port and enter to see the submenu.

HDCP	no HDCP

« Back
Video Settings Submenu

Conversion

The outgoing signal can be routed to the outputs with or without conversion as follows:

- **Passthrough:** no signal conversion.
- **4:4:4 to 4:2:0:** the signal is converted to the indicated color depth (RGB to YUV).
- **4:4:4 to 4:2:2:** the signal is converted to the indicated color depth. This feature is supported in case of HDMI 2.0 signals.
- **Left part and Right part *:** The device supports vertical splitting of an HDMI 2.0 4k@60Hz 4:4:4 input signal to left and right halves allowing for the transmission of an 18Gbps HDMI2.0 signal over two HDMI1.4 compliant links. The two halves can then be recombined at the signal destination. To apply the feature route the same input signal to 2 output ports. Set the conversion to **Left part** on one output port and **Right part** on the other output port. See the Typical Applications section.
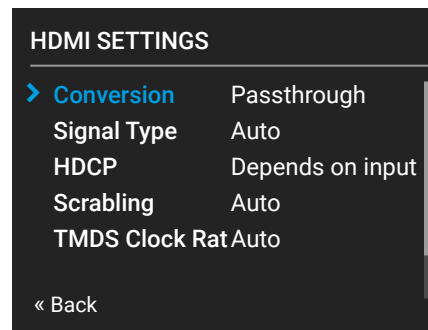

HDMI SETTINGS

› Conversion	Passthrough
Signal Type	Auto
HDCP	Depends on input
Scrabling	Auto
TMDS Clock Rat	Auto

« Back

*The availability of this setting depends on the hardware version of the output board (V1x_). The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

HDCP

- **Depends on input:** the encryption level is determined according to the settings on the input port and the source content/device. If the incoming signal is not encrypted, then the outgoing signal will not be encrypted either.
- **Max. possible:** the highest supported level of encryption (between the matrix and the sink) is applied (up to HDCP v2.2).

See more information about HDCP in HDCP Management section.

Scrambling

HDMI 2.0 standard introduced the **Scrambling** to the TMDS encoding which helps to decrease the energy peaks and hence the Electro Magnetic Interference (EMI). To maintain backward compatibility, HDMI 2.0 only requires the use of scrambling with data rates of above 3.4 Gbps per lane. The feature can be set on the output ports to **Auto / Forced On / Forced Off**.

> INFO: The **Auto** setting (recommended) allows the pseudo-random conversion at frequencies above the threshold. **Forced on** and **Forced off** settings override this operation.

TMDS Clock Rate

However, the clock rate can be set to **1/10** or **1/40** if necessary, using the **Auto** setting is recommended.

Analog Audio Submenu

> **DIFFERENCE!** Analog Audio submenu appears when there is an analog audio output beside the chosen video port. **-A** or **-Audio** suffix in the model name refers to the analog audio feature (see the Model Comparison table about the analog audio availability).

ANALOG VOLUME

🔇 50 %   -8dB 🔊

0 10 20 30 40 50 60 70 80 90 100
Information about the Analog and the Embedded Audio signal are displayed in this submenu.

- **Audio Present** and **Audio Type** (signal info),
- **Audio Mode**: Off / HDMI Only / Analog Only / HDMI and Analog.
- **Analog Mute**
- **Analog Volume**: adjustable from 0 (-96dB) to 100% (0dB),
- **Analog Balance**: adjustable from -100% to + 100% (0 = center).

4.3.4. EDID Menu

Advanced EDID Management is available in the front panel LCD menu which allows to view an EDID, switch, or save it to the User EDID memory. See more information about EDID technology in EDID Management. The EDID memory structure of the device can be found in the Sources and Destinations section.

View Submenu

Select the desired EDID memory block: **Factory EDIDs, Last Attached EDIDs, User EDIDs,** or **Emulated EDIDs.** Select the **Name** item and press the knob. Use the jog dial to step between the EDIDs. The following information can be checked:

- **Preferred Resolution**
- **Monitor Name**
- **Audio Info**

FACTORY EDIDS

· Name	F133 ⬍
Preferred Res.	4096x2160p60.00Hz

« Back
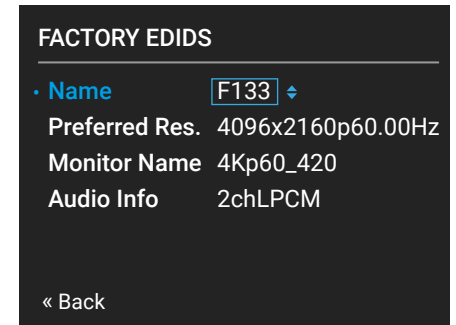

Switch Submenu

The submenu looks similar as the View submenu but in this case, the Destination is also listed. To change an EDID do the followings:

SWITCH

Name	D4
Preferred Res.	1920x1080p60.00Hz
Monitor Name	GW2470
Audio Info	2chLPCM
· Destination	E1 ⬍

« Back   ✔ Switch

Step 1. Navigate to the **EDID/Switch** submenu.

Step 2. Select the **Name** item and press the knob. Use the jog dial to select the desired **EDID** (F1-F144, U1-U100, or D1-D8) and press the knob.

Step 3. Select the **Destination** item and press the knob. Use the jog dial to select the desired **EDID memory** (E1-E8, All) and press the knob.

Step 4. Navigate to the **Switch** option and press the knob.
Save Submenu

The EDID of a connected sink can be saved to the User EDID memory as follows:

SAVE

Name	D1
Preferred Res.	1920x1080p60.00Hz
Monitor Name	GW2470
Audio Info	2chLPCM
• Destination	U1 ⇕

« Back   ✔ Save

Step 1. Navigate to the **EDID/ Save** submenu.

Step 2. Select the **Name** item and press the knob. Use the jog dial to select the desired **EDID** (D1-D8) and press the knob.

Step 3. Select the **Destination** item and press the knob. Use the jog dial to select the desired **EDID memory** (U1-U100) and press the knob.

Step 4. Navigate to the **Save** option and press the knob.
4.3.5. Health Menu

The following information is displayed about the matrix in this menu:

CONTROL PANEL

5V	5.18
1.8V	1.82
Temp°C	31.18

« Back

- **Uptime**: the elapsed time since the last booting.
- **Control Panel**: Internal Voltage and temperature values about the front panel board.
- **Motherboard**: Internal Voltage and temperature values about the motherboard.
- **IO ports**: Internal Voltage and temperature values about the Input/Output ports.
4.3.6. Presets Menu

The router can store presets and the followings are stored in each slot: Input/output crosspoint state, muted/unmuted states.

SAVE PRESET

Button5	5
Button6	6
Button7	7
Button8	8
My_pres	

« Back

> **ATTENTION!** When factory default settings are restored, presets are deleted.
Load a Preset

> **ATTENTION!** The Preset loading has an effect on all ports, except the locked ones.

Step 1. Navigate to the **Presets** / **Load Preset** submenu and press the **knob**.

Step 2. The previously save presets are listed. Button1..8 mean the presets which are also available by the front panel **Source buttons**. Select the desired **memory slot** and press the **knob**. If any other preset had been saved previously they would be also listed.

Step 3. Confirm your selection by pressing the **Yes**.

> INFO: Eight memory slots are available by the front panel buttons, see Save or Load a Preset section.

Save a Preset

Step 1. Create the desired I/O layout.

Step 2. Navigate to the **Presets** / **Save Preset** submenu and press the **knob**.

Step 3. Select the desired **memory slot** (Button1..Button8 mean the eight **Source buttons**) and press the **knob**. If any other preset had been saved previously they would be also listed. See the corresponding Presets section.

Step 4. Confirm your selection by pressing the **Yes**.

5

Software Control – Using the Built-in Web

The built-in website of the matrix allows to connect and control the matrix via a web browser. Built-in web and Lightware Device Controller Software has the same look and functionality.

▸ ESTABLISHING THE CONNECTION
▸ THE LAYOUT OF THE BUILT-IN WEB

System Requirements

Operating System: Microsoft Windows XP, Windows Vista, Windows 7, Windows 10, MacOS, Linux.

Web Browser: Mozilla Firefox, Google Chrome, Apple Safari.

ATTENTION! The EDID export function works only in Windows and MacOS operating systems under Mozilla Firefox or Google Chrome web browsers.

5.1. Establishing the Connection

ATTENTION! Please be sure that the computer is in the same network as the matrix. If the computer has multiple Ethernet connections (for example Wi-Fi and LAN connections are used simultaneously) you will have to know the IP address for the one that is used for controlling the matrix.

Step 1. Connect the matrix and the computer either via

- Ethernet, with LAN patch cable (to a Hub, Switch or Router), or
- Ethernet, with LAN cross cable (directly to Computer).

Step 2. Change to the desired IP settings if it is needed.

Step 3. Type the IP address to the address bar of the web browser and press enter (factory default address is dynamic).

5.2. The Layout of the Built-in Web

The built-in web page allows almost the same controlling functions which are available via the Lightware Device Controller. Select a menu item on the left side; the default screen is the Crosspoint menu with Grid view. One of the differences: the web page can be reloaded by clicking on the information ribbon.

ATTENTION! Please enable the pop-up windows in your browser; certain contents are displayed in a new window.

Tile View of the Crosspoint Menu of the Built-in Webpage
(Displayed in a mobile device)

6

Software Control – Lightware Device Controller

The matrix can be controlled by a computer through the LAN or USB ports using Lightware Device Controller (LDC). The software can be installed on a Windows PC or MacOS. The application can be downloaded from www.lightware.com. The Windows and the Mac versions have the same look and functionality.

- ▸ INSTALL AND UPGRADE
- ▸ RUNNING THE LDC
- ▸ DEVICE DISCOVERY WINDOW
- ▸ CROSSPOINT MENU
- ▸ INPUT PORT PROPERTIES
- ▸ OUTPUT PORT PROPERTIES
- ▸ PRESETS
- ▸ EDID MENU
- ▸ SETTINGS MENU
- ▸ ADVANCED VIEW

6.1. Install and Upgrade

Installation for Windows OS

Step 1. Run the installer. If the User Account Control drops a pop-up message click Yes.

Step 2. During the installation you will be prompted to select the type of the installation: **normal** and the **snapshot** install:

Normal install	Snapshot install
Available for Windows and macOS	Available for Windows
The installer can update only this instance	Cannot be updated
Only one updateable instance can exist for all users	Different versions can be installed for all users

Comparison of the Installation Types

ATTENTION! Using the Normal install as the default value is highly recommended.

Installation for macOS

INFO: After the installation, the Windows and the Mac application has the same look and functionality. This type of the installer is equal with the Normal install in the case of Windows and results an updateable version with the same attributes.

Mount the DMG file with double clicking on it and drag the LDC icon over the Applications icon to copy the program into the Applications folder. If you want to copy the LDC into another location just drag the icon over the desired folder.

The Upgrading of the LDC

Step 1. Run the application.

The **Device Discovery** window appears automatically and the program checks the available updates on Lightware's website and opens the update window if the LDC found updates.

The current and the update version number can be seen at the top of the window and they are shown in this window even with the snapshot install.
The **Update** window can be opened manually by clicking the question mark and the **Update** button.

Step 2. Set the desired update setting in the **Options** section.

- ▪ When the **Check for updates automatically** option is marked, the LDC tries to find a new version after startup.
- ▪ If you want to postpone the update, set the reminder by the **drop down list**.
- ▪ If necessary, the proxy settings are available by clicking the **Setup** button.

Step 3. Click the **Download update** button to start the upgrading.

Step 4. When the download process finished, the **Download Update** button changes to **Launch update.** Click it on to install the new version.
6.2. Running the LDC

The common way to start the software is double-click on the LDC icon. But the LDC can be run by command line parameters as follows:
Connecting to a Device with Static IP Address

Format: `LightwareDeviceController -i <IP_address>:<port>`

Example: `LightwareDeviceController -i 192.168.0.20:6107`

The LDC is connected to a device with the indicated static IP address directly; the Device Discovery window is not displayed. When the port number is not set, the default port is used: 10001 (LW2 protocol). For LW3 devices use the **6107** port number.

6.3. Device Discovery Window

There are three tabs for the different type of interfaces, select the Ethernet or USB tab.

Device Discovery Window

The **Ethernet** tab consists of two lists:

▪ **Favorite Devices:** You can add any Lightware device that is connected via Ethernet and no need to browse all the available devices. Devices can be added by pressing the **Add** button or marking the desired device by the ★ symbol in the **All Devices** list.

▪ **All Devices:** The Lightware devices are listed which are available in the connected network.

Establishing the Connection

Select the unit from the discovered Ethernet devices; double click on the device or select it and click on the green **Connect** button.

Further Tools

The **Tools** menu contains the following options:

▪ **Log Viewer:** The tool can be used for reviewing log files which have been saved previously.
▪ **Create EDID:** This tool opens the Easy EDID Creator wizard which can be used for creating unique EDIDs in a few simple steps. Functionality is the same as the Easy EDID Creator, for the detailed information see Creating an EDID section.
▪ **Demo Mode:** This is a virtual MX-FR17 matrix router with full functionality built into the LDC. Functions and options are the same as a real MX-FR17 device.

The **Terminal** window is also available by pressing its button on the bottom.

6.4. Crosspoint Menu

6.4.1. Grid View

Grid view is a user-friendly graphical interface displaying the crosspoint state of the matrix router. This is an easy way to change between the input sources and output sinks.
Crosspoint menu of the MX2-24x24-DH-12DPi-R model

① Device Label — The **Device Discovery** window can be opened by clicking on this ribbon. The Device Label is displayed which is not the same as the Product Name. The Product name is displayed in a hint box when the mouse cursor is above the box. See more information in Status Tab section, and Setting the Device Label section.

② Main Menu — The available menu items are displayed. The active one is highlighted with a dark grey background color

③ Navigation Panel — When the matrix size is too big to display all inputs and outputs, clicking on the navigation bar scrolls up and down or left and right direction to reach the other ports.

④ Standby Switch — The device can be switched to **Standby Mode** or wake up from this mode by the button. When the matrix is in standby mode the video transmission is disabled and the LCD is switched off. Remote connections (LAN, RS-232) remain enabled.

⑤ Tab Selector Ribbon — Select the desired **Grid View, Tile View**, or **Presets** tab.

⑥ Input Ports — Each number represents an input port. Click on the port to display the **Port Properties** window.

⑦ Connections — **Grey** square means the port is available but there is no connection. **White** square means there is a connection between the input and the output port.

⑧ Output Ports — Each number represents an output port. Click on the port to display the **Port Properties** window.

⑨ Advanced View — Displaying the **Advanced view** page, showing the Terminal window and the LW3 protocol tree.

Crosspoint Operations

Switching

For making a connection click on the desired square. If there is no connection between the desired input and output (the square is dark grey), the mouse pointer becomes a hand (link pointer) before the clicking. If the output port is not locked, the connection is made, the square becomes white and the cursor changes back to a pointer.

For example, Input 8 is not connected to Output 2 as shown on the first picture. If the connection is established the square becomes white. Input and output ports can be disconnected when clicking on a white square.

Muting Outputs

Outputs can be easily muted by clicking on the button represented by a crossed monitor beside the output. That means no signal is present on the given output. If mute is active, the color of the button's background changes to white.

Locking Outputs

Outputs can be locked to any input. After locking an output to an input, no switching is permitted to this output unless it is unlocked again. If output lock is active, the color of the button's background changes to white.

> INFO: Loading a preset does not change either the lock state or the switch state of a locked output. If an output is locked to an input before preset loading it will also be locked to that input after preset loading, so locked outputs ignore the preset.

6.4.2. Tile View

The tiles represent input or output ports and additionally show the most important port and signal information. Thus, the user can check the status of many ports at the same time.

Control Buttons

Mute	Mute or unmute selected output port(s)	Parameters	Open port properties window
Lock	Lock or unlock selected output port(s)	Select All	Select all ports (only in output switch mode)
View mode	Activate View mode	Deselect All	Deselect all ports (only in output switch mode)
Input switch	Activate Input switch mode	Autotake	Toggle Autotake mode ON/OFF
Output switch	Activate Output switch mode	Take	Execute crosspoint changes in Take mode
❶	Input Ports	Each tile represents an input port.
❷	Output Ports	Each tile represents an output port.
❸	Selected Port	Last selected port is displayed with a yellow background on the port bar. Press the button to open the port settings window.
❹	Connected Port(s)	The ports with white background are currently connected to the selected port. Press the button to open the port settings window.

Port Tiles

The colors of the port tiles and the displayed icons represent different states and information about the selected port:

Input1   **I1**
① Port name

② Background color:
  grey: not connected
  yellow: selected
  white: connected

③ Port number

④ Signal present indicator:
  green: present
  grey: not present

⑤ State indicators

State Indicators

Following icons display different states of the input/output ports/signal:

Icon	Icon is grey	Icon is black
🔑	Signal is **not** encrypted with HDCP	Signal is encrypted with HDCP
🔌	Source/sink is **not** connected	Source/sink is connected (+5V / Hotplug detected)
🎵	Audio is **not** embedded in the video stream	Audio is embedded in the video stream
🔒	Port is unlocked	Port is locked
⌦	Port is unmuted	Port is muted

Display Modes

View Mode

This mode was designed to display the crosspoint state of a selected and its connected port(s). Crosspoint settings cannot be changed in View mode but port settings are available.

View mode

Input Switch Mode

The mode can also be named as 'Input priority-mode': an input port has to be selected at first then the connected output ports are shown. Thus, the output ports connected to the input port can be changed.

Input switch

Output Switch Mode

This mode can also be named as 'Output priority-mode': an output port has to be selected at first then connected input port is shown. Thus, the output port connected to the input port can be changed.

Output switch

Switching Operations

Take Mode

If the Autotake button is outlined with black color Take mode is active. In Take mode any crosspoint change – (dis)connecting ports to/from the previously selected port – is executed only after pressing the Take button. Following steps describe the process of the switching:

Autotake

Step 1. Press the desired **Input switch** or **Output switch** button to select the switching mode.

Step 2. Select the desired port; it will be highlighted with yellow color and displayed also on the port bar on the right.

Step 3. Connected ports are highlighted with white color and displayed also on the port bar on the right.

Step 4. Create the desired crosspoint settings by (de)selecting the ports; they will start to blink.

Step 5. Press the **Take** button to execute changes or **Cancel** to discard.

INFO: Take mode remains active until it is switched off. Selecting another view mode or menu item does not change the Take/Autotake mode state.

Autotake Mode

If the Autotake button is outlined with yellow color Autotake mode is active. In this mode, any crosspoint change – (dis)connecting ports to/from the previously selected port – is executed immediately after pressing the port button. Following steps describe the process of the switching:

Autotake

Step 1. Press the desired **Input switch** or **Output switch** button to select switching mode.

Step 2. Select the desired port; it will be highlighted with yellow color and displayed also on the port bar on the right.

Step 3. Connected ports are highlighted with white color and displayed also on the port bar on the right.

Step 4. Create the desired crosspoint settings by (de)selecting the ports; the changes are executed immediately.
INFO: Autotake mode remains active until it is switched off. Selecting another view mode or menu item does not change the Take/Autotake mode state.

6.5. Input Port Properties

6.5.1. HDMI Inputs

Click on a port to display its properties; Signal status information and the most important parameters are displayed.

General Tab - General

General tab in the input port properties window

Port name

The name of a port can be changed by typing the new name and clicking on the **Set** button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.

Mute

The incoming signal can be muted/unmuted by pressing the button. If the port is muted, button text is **Unmute**. In this case, no signal is transmitted from the input port.

Lock

The port can be locked to the currently connected output ports by the button. If the port is locked, button text is **Unlock.** In this case the mute state and the crosspoint cannot be changed.

Switch to all

The input port will be switched to all output ports.

Emulated EDID

The name of the currently emulated EDID (displays the **Monitor Name** in the EDID menu).

General Tab - Video Settings

HDCP Enable

- **Disable HDCP on input:** The connected source will detect that the matrix is not HDCP-compliant and turn off authentication if the content allows it.
- **Allow HDCP 1.4 only *:** The connected source will detect that the matrix is compliant with HDCP 1.4 but not compliant with HDCP 2.2.
- **Allow HDCP 2.2 and HDCP 1.4:** The connected source will detect that the matrix is compliant with HDCP 2.2.
- **High Value mode (limit switching to HDCP 2.2 sinks)**: Any version of HDCP is allowed on the input but the incoming signal is always internally upconverted to HDCP 2.2 content and thus cannot be switched to HDCP 1.4 sinks.

*The availability of this setting depends on the hardware version of the input board (V1x_) and the port type (HDMI). The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Resetting the default values: **HDCP = HDCP 2.2 and HDCP 1.4**.

General Tab - Audio Settings
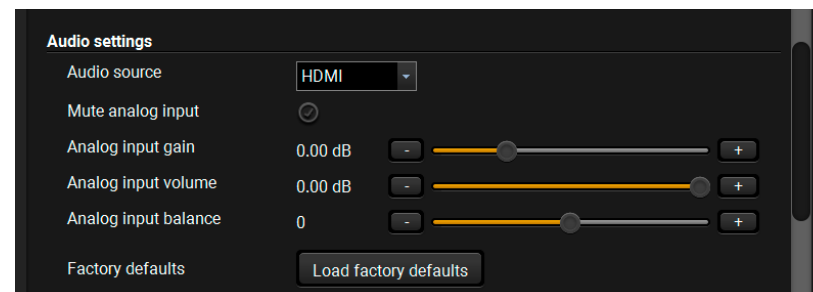

Analog audio settings in the output port properties window

Audio source

- **Off:** audio is not embedded in the video stream.
- **HDMI:** the audio of the incoming video stream is embedded in the video.
- **Analog input *:** the analog audio input signal is embedded in the video.

Mute analog input *

The analog audio input signal can be muted by this option.

Analog input gain *

Setting the value between -12 dB and +35 dB.

Analog input volume *

Setting the value between -95.62 dB and 0 dB.

Analog input balance *

Setting the value between -100 and +100 (0 = center).

*Analog audio properties appears only in **-Audio or -A** suffixed models, where there is an analog audio port beside the video port.

Video status

The signal format and the detected parameters are described in these sections.
Video status information in the input port properties window

The following signal status information are displayed in this section:

+ 5V present, Signal present, HDCP status, HDCP stream type, Signal bandwidth, Resolution, Color depth, Color space, Color range, Colorimetry, Overscan/underscan, Frame Detector.

HDCP status

The currently applied HDCP encryption level on the input (e.g. HDCP 1.4).

- **non HDCP signal:** the signal is not encrypted.
- **HDCP 1.4 stream:** the signal is encrypted with HDCP v1.4
- **HDCP 2.2 stream (HDCP 1.4 convertable):** the signal is encrypted with HDCP 2.2 but can be converted to be encrypted with HDCP v1.4. See the corresponding section in HDCP v2.2 (the first figure).
- **HDCP 2.2 stream (non HDCP 1.4 convertable):** the signal is encrypted with HDCP 2.2 and not allowed to convert and encrypt with HDCP v1.4. In this case the signal can be displayed only on a HDCP v2.2-compliant sink device.

General Tab - Embedded audio

Presence of the embedded audio and the sampling frequency are displayed in Embedded audio section.

CEC Tab

The MX2-HDMI20 series is able to send and receive Consumer Electronic Control (CEC) commands. This feature is for remote control of the source or sink device. CEC is a bi-directional communication via HDMI or DP cable, in this case between the source and the input port of the matrix switcher.

▌ **ATTENTION!** Make sure that the controlled unit is CEC-capable and this function is enabled.
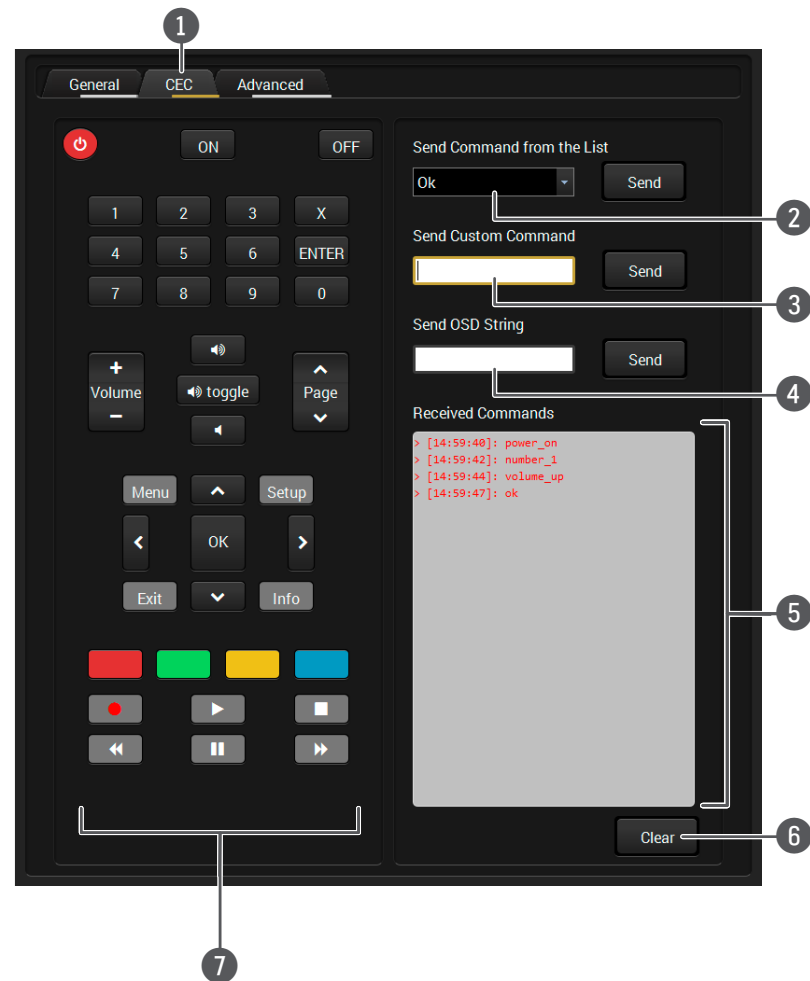

Layout of CEC panel in Lightware Device Contoller

① Tab selector — Select the **CEC** tab for managing CEC commands.

② Drop-down command list — This list contains the basic CEC commands, most of them are displayed on the graphical interface, too (on the left side). Click on the **Send** button to execute sending the command.

③ Custom command textbox — The text field is for sending hexadecimal commands to the source. The maximum length of the message could be 30 character-long (15 bytes). Click on the **Send** button to confirm.

④ OSD string textbox — A max. 14 character-long text can be shown on the source device. The send OSD (On-screen display) command textbox is the input field of the string. Alphanumeric characters, glyphs and space are accepted. Click on the **Send** button to execute the command.

⑤ Received Command box — This window displays all the sent (in red) CEC commands and the received answers (in blue) with a timestamp.

Legend of the received message:

< [10:33:17] ACK
Answer for the acknowledged command.
< [10:35:01] NACK
Answer for the not acknowledged command.
< [10:33:17] IN PROGRESS
The command is in progress at the moment.
< [10:33:17] FAILED
Answer for other failure.
< [10:35:40] feature_abort_<>*
This is the most common answer from the third-party devices when the command is delivered, but the execution is refused. The cause of the refuse stands after 'feature_abort' expression.

⑥ Clear button — Click on the **Clear** button to erase the content of the terminal window.

⑦ CEC command button panel — This panel provides the quick and easy management of CEC commands. The buttons are pre-programmed with basic functions and send command towards the source. The communication is displayed in the Received Command box. For the list of commands, see Sending CEC Commands Towards the Source section. Both the layout and functionality are similar to the design of a remote control.

▌ INFO: The first 2x2 bit source and destination address. In this case that is always 04.

Advanced Tab

AVI Infoframe, Audio InfoFrame, Vendor Specific Infoframe

Advanced signal information can be displayed on this tab if the video signal contains them. It could be used for cable diagnostic purpose.

Advanced tab in the input port properties window

High Dynamic Range (HDR) Infoframe

This layout supports the HDR signal analysis by converting the raw infoframe data to a human-readable format. When the video signal is HDR and its infoframe contains metadata, then it will be displayed in this tab.

Advanced tab in the input port properties window

HDMI 2.0

- HDMI 2.0 related information: Scrambling / Clock rate

6.5.2. DisplayPort Inputs

> INFO: This window appears only when the selected port is DisplayPort. See the Model Comparison table which model has DP input.

Click on a port to display its properties; Signal status information and the most important parameters.

General Tab- General

General tab in the input port properties window

Port name

The name of a port can be changed by typing the new name and clicking on the **Set** button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.

Mute

The incoming signal can be muted/unmuted by pressing the button. If the port is muted, button text is **Unmute**. In this case, no signal is transmitted from the input port.

Lock

The port can be locked to the currently connected output ports by the button. If the port is locked, button text is **Unlock.** In this case the mute state and the crosspoint state of this port cannot be changed.

Switch to all

The input port will be switched to all output ports.

Emulated EDID

The name of the currently emulated EDID (displays the **Monitor Name** in the EDID menu).

General Tab - Displayport Link

This section has a built-in help in the LDC. Click on the ➊ icon to open the related info textbox in a pop-up window.
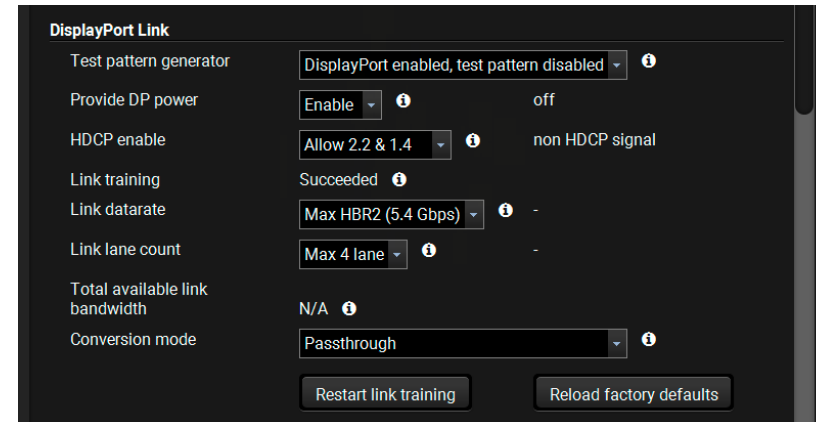

DisplayPort settings in the input port properties window

Test pattern generator *

- **DisplayPort enabled, test pattern disabled:** default value for DP video transmission.
- **DisplayPort disabled, test pattern enabled:** This function makes possible to route the analog audio towards the output without any video transmission. Enabling testpattern will disable the DisplayPort connector.

* Test pattern generator option appears only in **-A or -Audio** suffixed models, where there is an analog audio port beside the DP port.

Provide DP Power

- **Enable /Disable**: DisplayPort input ports are capable of providing about 1.5 W (500 mA @ 3.3V) power on the DP_PWR pin. As in DisplayPort copper cables this pin is not connected, the setting has no effect when a PC or a media player is attached to the respective port. Typically, this feature can be used for powering DisplayPort dongles, adapters and active optical cables that do not have external power supplies. The matrix is also capable of detecting and displaying short circuit conditions where the current exceeds the 500 mA limit. Adjusting these settings may help restarting or powering down the connected device.

HDCP enable

- **Disable HDCP on input:** The connected source will detect that the matrix is not HDCP-compliant and turn off authentication if the content allows it.
- **Allow HDCP 1.4 only *:** The connected source will detect that the matrix is compliant with HDCP 1.4 but not compliant with HDCP 2.2.
- **Allow HDCP 2.2 and HDCP 1.4:** The connected source will detect that the matrix is compliant with HDCP 2.2.
- **High Value mode (limit switching to HDCP 2.2 sinks)**: Any version of HDCP is allowed on the input but the incoming signal is always internally upconverted to HDCP 2.2 content and thus cannot be switched to HDCP 1.4 sinks.

*The availability of this setting depends on the hardware version of the input board (V1x_) and the port type (HDMI). The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Link training

This is a status information about the success of the link training. The result of the connection can be succeeded or not ready.

Link training is a process where the source (PC, laptop, media server) and the sink (matrix) agree on a data rate, lane count and electrical parameters. The successful link training is a pre-requisite of the video transmission. If the quality of the DisplayPort cable is insufficient to reliably handle higher data rates, link training will result in a lower data rate where stable connection between the source and the matrix can be maintained.

Clicking on the **Restart Link Training** button starts to build up the connection again between the matrix switcher and the source (it happens automatically when the source is connected). It is equal with unplug and reconnect the DP connector.

Link datarate

The DisplayPort 1.2 standard uses fix data rates on the high-speed lanes. With this setting, it is possible to limit the maximum data rate. Please note that the source can use lower data rate if the quality of the cable is low.

- **Max RBR:** Reduced Bit Rate uses 1.62 Gbps bandwidth per lane
- **Max. HBR:** High Bit Rate (HBR) uses 2.70 Gbps
- **Max. HBR2:** HBR2 is the fastest mode with a data rate of 5.40 Gbps per lane

INFO: RBR and HBR are defined in the DisplayPort 1.0-1.1a standards, while HBR2 was introduced in DisplayPort 1.2.

Link lane count

DisplayPort cables have four high-speed lanes, each of them are capable of transmitting data at a rate of 5.40 Gbps.

The following parameters can be set:

- **Max. 1 lane:** Transmits data at a rate of 5.40 Gbps.
- **Max. 2 lane:** Transmits data at a rate of 10.80 Gbps.
- **Max. 4 lane:** Transmits data at a rate of 21.60 Gbps.

The source and the sink agree on the link lane count during the link training process. Fewer link lanes result in lower power consumption at the transmitter side. With this setting, it is possible to limit the number of link lanes used.

INFO: Please note that the source can still use fewer lanes if there is no need for high data rates.

Total available link bandwidth

Displays the maximum available bandwidth.

The total available link bandwidth is the actual Link datarate multiplied by the Link lane count. If the bandwidth of the video stream is higher than the total available link bandwidth, then it is not possible to transmit the video stream over the link.

Conversion mode

The following settings are available:

- **Passthrough:** the video signal is transmitted to the output without any changing.
- **RGB 4:4:4 to YCbCr 4:2:2 12 bit:** the video converter subsamples the 4:4:4 signal to 4:2:2.
- **RGB 4:4:4 to YCbCr 4:2:0 8 bit:** the video converter subsamples the 4:4:4 signal to 4:2:0.

INFO: When the DisplayPort source sends RGB 4:4:4 10-bit HDR signal, then it will be converted to 8-bit HDMI signal, because of the HDMI 2.0 bandwidth limit. To enable YCbCr 4:2:2 conversion will save the bandwidth by chroma subsampling and preserve the color depth.

Below the Displayport Link section, the summary of the DP-related settings and status information of the selected port can be seen.
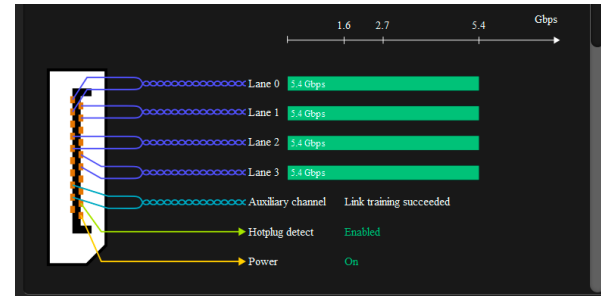

Status information of the active signal

Status information of the disconnected port

The audio setting possibilities are the same with the HDMI port's. For more details see General Tab - Audio Settings section.

Video status

The signal format and the detected parameters are described in these sections.

Video status information in the input port properties window

The following signal status information are displayed in this section:

- **Signal present**
- **Signal bandwidth**
- **Resolution**
- **Color depth**

INFO: Take care the deep color support of the emulated EDID in case of 10-bit or 12-bit color depth video signal. For more information about it, see DisplayPort Video Options.

- **Color space**
- Frame Detector

Embedded audio

Presence of the embedded audio and the sampling frequency are displayed in Embedded audio section.

CEC Tab

The DisplayPort CEC-capability is similar with the HDMI, so more details about the CEC command sending, see the CEC Tab section.

Advanced Tab

See more details about the advanced signal information in Advanced Tab section.

6.6. Output Port Properties

Click on a port to display its properties.
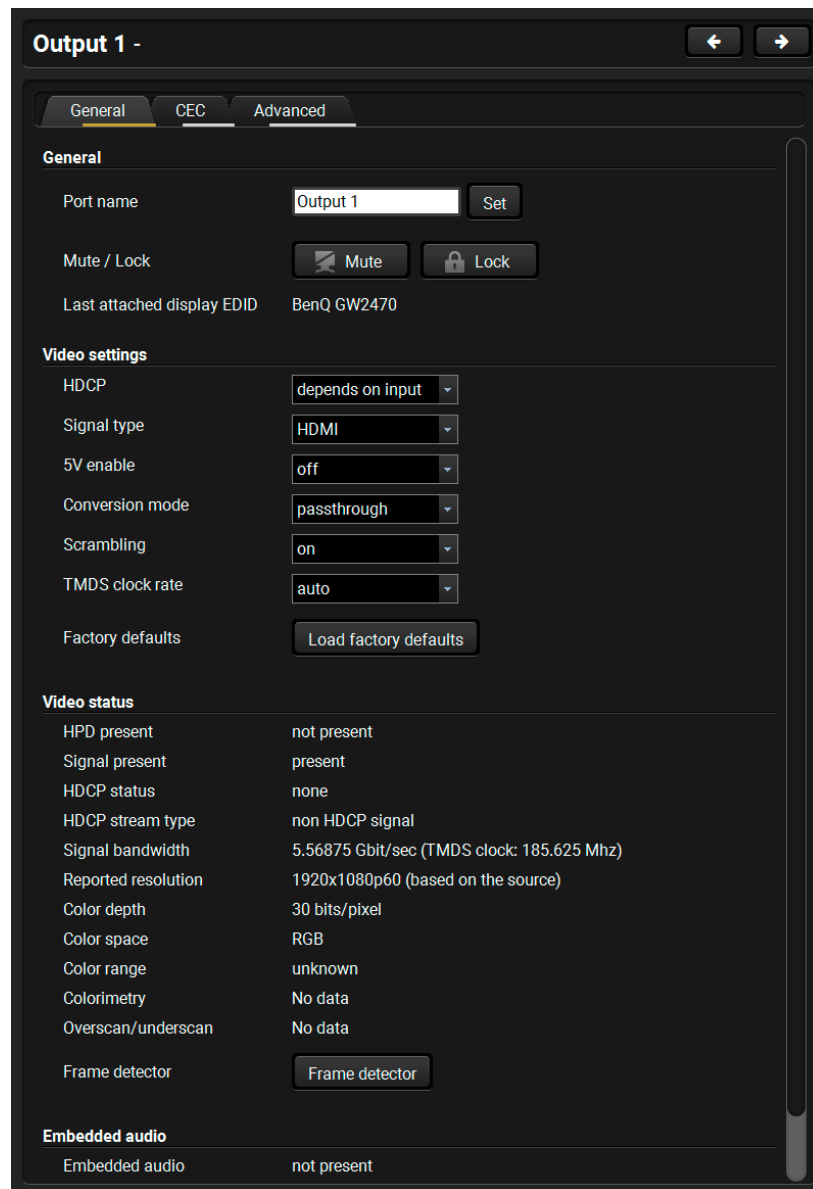

Output port properties window

General Tab - General

Port name

The name of a port can be changed by typing the new name and clicking the **Set** button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.

Mute

The incoming signal can be muted/unmuted by pressing the button. If the port is muted, button text is **Unmute**. In this case, no signal is transmitted to the output port.

Lock

The output port can be locked to the currently connected input port by the button. If the port is locked, button text is **Unlock**. In this case the mute state and the crosspoint state of the port cannot be changed.

Last attached display EDID

The name of the last attached monitor's EDID is displayed (shown as **Monitor Name** in the EDID menu).

General Tab - Video settings

HDCP

- **Depends on input:** the encryption level depends on the settings of the input port and the source content/device. If the incoming signal is not encrypted, then the outgoing signal will not be encrypted either.
- **Maximum possible:** the highest supported level of encryption (between the matrix and the sink) is applied (up to HDCP v2.2).

Signal type

The outgoing signal format can be selected by a drop-down list: **Auto, HDMI, DVI.**

5V enable

- **On:** +5V power is always sent thus the sink and the port are always connected.
- **Off:** +5V power is not sent towards the sink, thus the sink does not sense the connection.

Conversion mode

- **Passthrough:** no signal conversion.
- **4:4:4 to 4:2:0 *:** the signal is converted to the indicated color depth.
- **4:4:4 to 4:2:2:** the signal is converted to the indicated color depth.
- **LEFT part/RIGHT part * :** The device supports vertical splitting of an HDMI 2.0 4k@60Hz 4:4:4 input signal to left and right halves allowing for the transmission of a 18Gbps HDMI2.0 signal over two HDMI1.4 compliant links. The two halves can then be recombined at the signal destination. To apply the feature route the same input signal to 2 output ports. Set the conversion to **Left** on one output port and **Right** on the other output port. See the application diagram in the Typical Applications chapter.

* The availability of this setting depends on the hardware version of the output board (V1x_). The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Scrambling

HDMI 2.0 standard introduced scrambling to the TMDS encoding which helps to decrease the energy peaks and hence the Electro Magnetic Interference (EMI). To maintain backwards compatibility, HDMI 2.0 only requires the use of scrambling with data rates of above 3.4 Gbps per lane. The feature can be set on the output ports to **On / Off,** or **Auto** (recommended).

TMDS clock rate

Setting the value to **1:10, 1:40,** or **Auto** (recommended).

Factory defaults

Resetting the default values:

- **HDCP** = depends on input; **Signal type** = auto; **Conversion mode** = passthrough; **Scrambling** = auto; **TMDS clock rate** = auto.

General Tab - Audio settings

> INFO: Analog audio properties appears only in **-A or -Audio** suffixed models, where there is an analog audio port beside the HDMI port.

Mute analog output

The analog audio output signal can be muted by this option.
Analog audio settings in the output port properties window

Analog output volume

Setting the value between -95.62 dB and 0 dB.

Analog output balance

Setting the value between -100 and +100 (0 = center).

Factory defaults

Resetting the default values:

- **Analog output** = unmuted,
- **Analog output volume** = 0,
- **Analog output balance** = 0 (center).

General Tab - Video status

The signal format and the detected parameters are described in these sections.
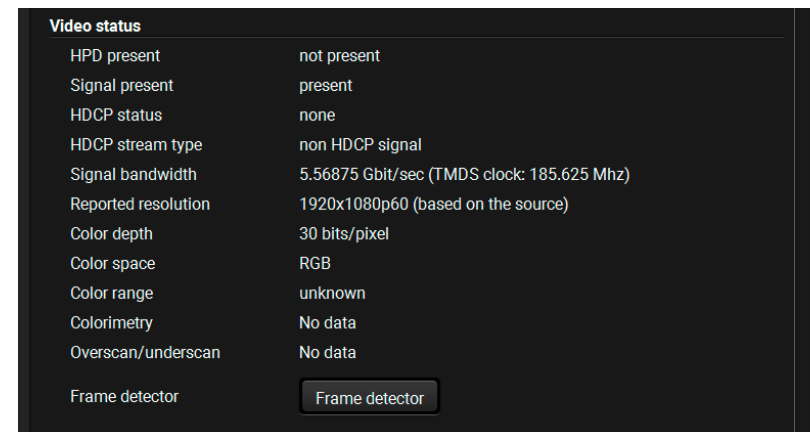

Video status information in the output port properties window

The following signal status information are displayed in this section:

HPD present, Signal present, HDCP status, HDCP stream type, Signal bandwidth, Reported resolution, Color depth, Color space, Color range, Colorimetry, Overscan/underscan, Frame Detector.

HDCP status

The currently applied HDCP encryption level (e.g. HDCP 1.4)

HDCP stream type

- **non HDCP signal:** the signal is not encrypted.
- **HDCP 1.4 stream:** the signal is encrypted with HDCP v1.4
- **HDCP 2.2 stream (HDCP 1.4 convertable):** the signal is encrypted with HDCP 2.2 but can be converted to be encrypted with HDCP v1.4. See the corresponding section in HDCP v2.2 (the first figure).
- **HDCP 2.2 stream (non HDCP 1.4 convertable):** the signal is encrypted with HDCP 2.2 and not allowed to convert and encrypt with HDCP v1.4. In this case the signal can be displayed only on a HDCP v2.2 compliant sink device.

Advanced tab
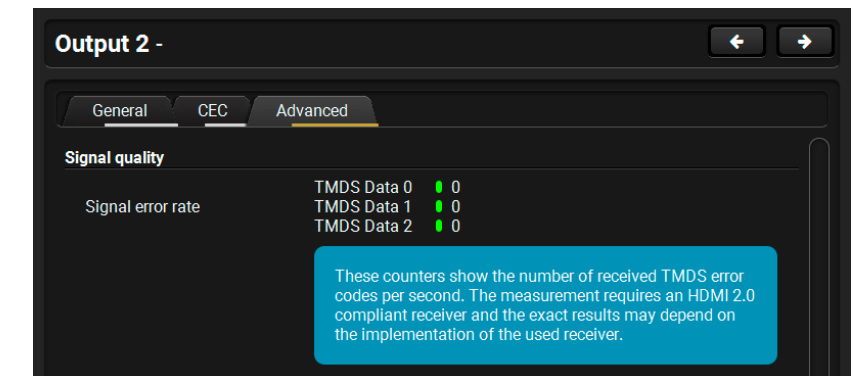

Advanced tab in the output port properties window

Signal quality

Signal information is available on this tab which can be used for cable diagnostic purpose. The following information are displayed:

- Signal error rate: number of the faulty charatcters per second

> INFO: If the signal error rate is zero, it refers to the perfect data transmission. However, some sources send character errors consciously during their regular operation.

- BCH ECC errors: Bose–Chaudhuri–Hocquenghem Error Correction Codes errors means the error rate of the data packages.

See more details about the advanced signal information in Advanced Tab section.

6.6.1. Frame Detector

The ports can show detailed information about the signal like full size and active video resolution. This feature is a good troubleshooter if compatibility problems occur during system installation. To access this function, open the port properties window and click on **Frame detector** button.
Frame Detector Window

Lightware's Frame Detector function works like a signal analyzer and makes possible to determine the exact video format that is present on the port, thus helps to identify many problems. E.g. actual timing parameters may differ from the expected and this may cause some displays to drop the picture.

Frame Detector measures detailed timings on the video signals just like a built-in oscilloscope, but it is much more easy to use. Actual display area shows the active video size (light grey). Dark grey area of the full frame is the blanking interval which can contain the info frames and embedded audio data for HDMI signals. Shown values are measured actually on the signal and not retrieved only from the HDMI info frames.

6.7. Presets

The router can store presets and the followings are stored in each slot: input/output crosspoint state, muted/ unmuted states. Preset loading has an effect on all ports, except the locked ones.

ATTENTION! When factory default settings are restored presets are deleted.

ATTENTION! The Preset loading has an effect on all ports, except the locked ones.
Presets Tab

Loading a Preset

Step 1. Select the **Presets** tab from the **Crosspoint** menu.

Step 2. Select the desired preset; check the **Preview** panel and press the **Load** button. Press **Yes** in the confirmation window.

INFO: Presets which were saved by the front panel buttons previously are listed with names Button1.. Button8 as default. See the corresponding Save or Load a Preset section.

Auto load mode

When the **Auto load** button is highlighted with green, the mode is active. In this case, confirmation is **not** required: the selected preset is loaded immediately when the button is pressed.

Saving a Preset to an Empty Slot

Step 1. Arrange the desired crosspoint connections in **Tile view** or **Grid view**.

Step 2. Select the **Presets** tab from the **Crosspoint** menu and type the desired **Preset name** in the indicated text field up to 16 characters. The followings are allowed when naming: letters (A-Z and a-z), hyphen (-), underscore (_), and numbers (0-9).

Step 3. Press the **Create New Preset** button to store the configuration.

Overwriting an Existing Preset

Step 1. Arrange the desired crosspoint connections in **Tile view** or **Grid view**.

Step 2. Select an existing preset, press the **Save** button and **Yes** to confirm.

Renaming a Preset

Step 1. Select the desired preset you want to rename.

Step 2. Type the desired name and press the **Rename Preset** button.

Deleting a Preset

Step 1. Select the desired preset you want to delete.

Step 2. Press the **Delete** button and **Yes** to confirm.

6.8. EDID Menu

Advanced EDID Management can be accessed by selecting the EDID menu. There are two panels: left one contains **Source EDIDs**, right one contains **Destination** slots where the EDIDs can be emulated or copied.

Control buttons

Button	Description	Button	Description
Export	Exporting an EDID (save to a file)	>	Executing EDID emulation or copying (Transfer button)
Import	Importing an EDID (load from a file)	Clear selected	Deleting EDID (from User memory)
Info	Display EDID Summary window	Select all	Selecting all memory places in the right panel
Edit	Opening Advanced EDID Editor with the selected EDID	Select none	Selecting none of the memory places in the right panel
Create	Opening Easy EDID Creator		

6.8.1. Sources and Destinations

The EDID memory consists of four parts:

▪ **Factory** EDID list (F1-F148) the pre-programmed EDIDs, see the Factory EDID List in the Appendix section.

▪ **Dynamic** EDID list (D1-D8): the EDID of the last attached display device. The matrix stores the last EDID from the previously connected sink on each output port. Thus, an EDID can be shown even if there is no device is connected to the output port at that moment.

▪ **User memory** locations (U1 – U100): they can be used to save custom EDIDs. Any EDID from the User/Factory/Dynamic EDID lists can be copied to the user memory.

▪ **Emulated** EDID list (E1-E8): the currently emulated EDID for the input. The source column displays the memory location that the current EDID was routed from. The source reads the EDID from the Emulated EDID memory on the input port.

There are two types of emulation: **static** and **dynamic**.

▪ **Static EDID emulation:** an EDID from the Factory or User EDID list is selected. Thus, the Emulated EDID remains the same until the user emulates another EDID.

▪ **Dynamic EDID emulation:** it can be enabled by selecting D1-D8 EDID memory. The attached monitor's EDID is copied to the input; if a new monitor is attached to the output, the emulated EDID is changed automatically.

6.8.2. EDID Operations

Changing the Emulated EDID

Step 1. Choose the desired tab (**Factory, Dynamic**, or **User** EDID list) on the left panel and select an **EDID**.

Step 2. Select the **Emulated** tab on the right panel.

Step 3. Select the **target port** on the right panel (one or more ports can be selected); the EDID(s) will be highlighted with a yellow cursor.

Step 4. Press the **Transfer** button to change the emulated EDID.

Learning an EDID

The process is the same as changing the emulated EDID; the only difference is the **Destination** panel: press the **User** button. Thus, one or more EDIDs can be copied into the user memory either from the factory memory or from a connected sink (Dynamic).

Exporting an EDID

Source EDID can be downloaded as a file (*.bin, *.dat or *.edid) to the computer.

Step 1. Select the desired **EDID** from the **left panel** (the line will be highlighted with yellow).

Step 2. Press the **Export** button to open the dialog box and **save** the file to the computer.

Importing an EDID

Previously saved EDID (*.bin, *.dat or *.edid file) can be uploaded to the **user memory**:

Step 1. Select the **User** tab in the left panel and select a memory slot.

Step 2. Press the **Import** button below the Source panel.

Step 3. Browse the file in the opening window then press the **Open** button. Browsed EDID is imported into the selected User memory.

▌ **ATTENTION!** The imported EDID overwrites the selected memory place even if it is not empty.

Deleting EDID(s)

The EDID(s) from User memory can be deleted as follows:

Step 1. Select the **User** tab in the left panel.

Step 2. Select the desired memory slot(s); one or more can be selected (**Select all** and **Select None** buttons can be used). The EDID(s) will be highlighted with yellow.

Step 3. Press the **Clear selected** button to delete the EDID(s).

6.8.3. EDID Summary Window

Select an EDID from Source panel and press the **Info** button to display EDID summary.

General

CEA High Dynamic Range	
CEA Detailed Timing Descriptors	

General

EDID version:	1
EDID revision:	3
Manufacturer ID:	LWR (Lightware Visual Engineering)
Product ID:	0000
Monitor serial number:	Not present
Year of manufacture:	2010
Week of manufacture:	Not Used
Signal interface:	Digital
Separate Sync H&V:	-
Composite sync on H:	-
Sync on green:	-
Serration on VS:	-
Color depth:	Undefined
Interface standard:	Not defined
Color spaces:	RGB 4:4:4 & YCrCb 4:4:4
Aspect ratio:	0
Display size:	0 cm X 0 cm

▌ INFO: Take care the deep color support of the emulated EDID in case of 10-bit or 12-bit color depth video signal. For more information about it, see more information in the DisplayPort Video Options section. The compatible color depths can be checked in CEA HDMI VSDB tab.

6.8.4. Editing an EDID

Select an EDID from the left panel and press the **Edit** button to display Advanced EDID Editor window. The editor can read and write all descriptors, which are defined in the standards, including the additional CEA extension. Any EDID from the device's memory or a saved EDID file can be loaded into the editor. The software resolves the raw EDID and displays it as readable information to the user. All descriptors can be edited, and saved in an EDID file, or uploaded to the User memory. For more details about EDID Editor please visit our website (www.lightware.com) and download the EDID Editor User's Manual.

EDID Editor Window

6.8.5. Creating an EDID

Since above mentioned Advanced EDID Editor needs more complex knowledge about EDID, Lightware introduced a wizard-like interface for fast and easy EDID creation. With Easy EDID Creator it is possible to create custom EDIDs in four simple steps. By clicking on the **Create** button below the left panel, Easy EDID Creator is opened in a new window.

Easy EDID Creator Wizard

6.9. Settings Menu

6.9.1. Status Tab

General information about the product is displayed in this tab:

- **Device name** (read-only), **Device label** (editable), **Part number** and **Serial number**,
- **Firmware versions**;
- **Hardware versions**,
- **Temperature** values, **Voltages**, **Operation** time.
- In **-R** suffixed models: PSU status can be seen in this tab (PSU1/PSU2: running / failed)

Status Tab in the Settings Menu

6.9.2. Network Tab

Network-related settings are available on the tab.

Network Tab in the Settings Menu

When dynamic IP address is used, the DHCP option is ticked; the IP settings of the matrix is shown in the first three lines. When static IP address is used, the DHCP option shall be unticked and below three lines can be used to define the IP settings. The device can be controlled by LW3, LW2 protocols, or P#2 protocol.

ATTENTION! Connecting to the matrix via Ethernet and using LW2 port no. (default is 10001) the device accepts LW2 protocol commands. Using LW3 port no. (default is 6107) the device accepts LW3 protocol commands.

6.9.3. RS-232 Tab

The local RS-232 port settings are available on this tab.

RS-232 Tab in the Settings Menu

6.9.4. Front Panel Tab

Certain settings in connection with the front panel LCD are available in the LDC as well.

- **LCD brightness:** the slider can be set to 0 contrary to the front panel menu. When the value is 0, the LCD is totally dark.
- **Lock front panel:** the same as the Control lock button on the front panel.
- **Enable buzzer:** enable/disable the built-in beeper.
- **Find my device:** the matrix buzzer beeps shortly three times.
Front Panel Tab in the Settings Menu

6.9.5. System Tab

The following settings are available on this tab:

- **Load factory default settings,**
- **Reboot the device,**
- **Sett the time** (internal clock) of the matrix which is used for logging events.

ATTENTION! The internal clock is supplied by a button cell when the device is switched off. If the set time is changed unintentionally or you met any weird behavior in connection with the internal clock, please contact support@lightware.com.
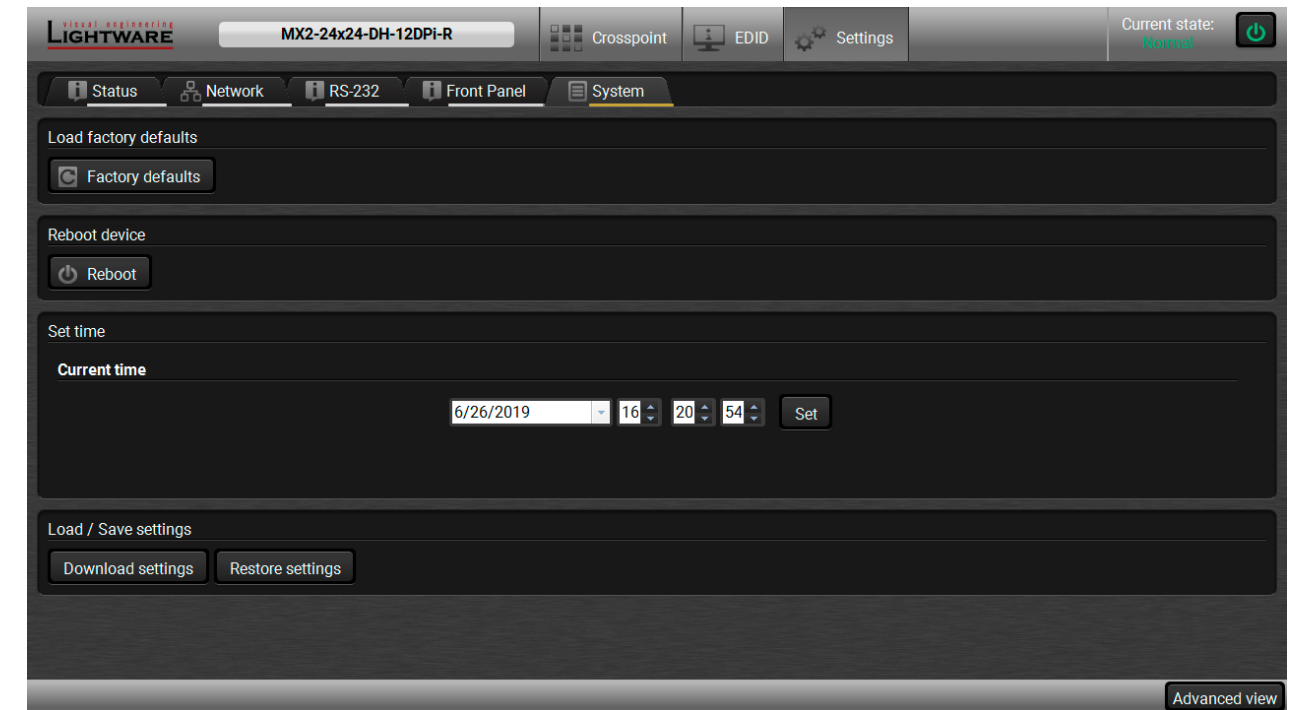

System Tab in the Settings Menu

6.10. Advanced View

Advanced view is the surface for displaying the LW3 protocol tree. Commands and specific parameters (which are not available on the graphical user interface of the LDC) can be run and set by the controlling tools.
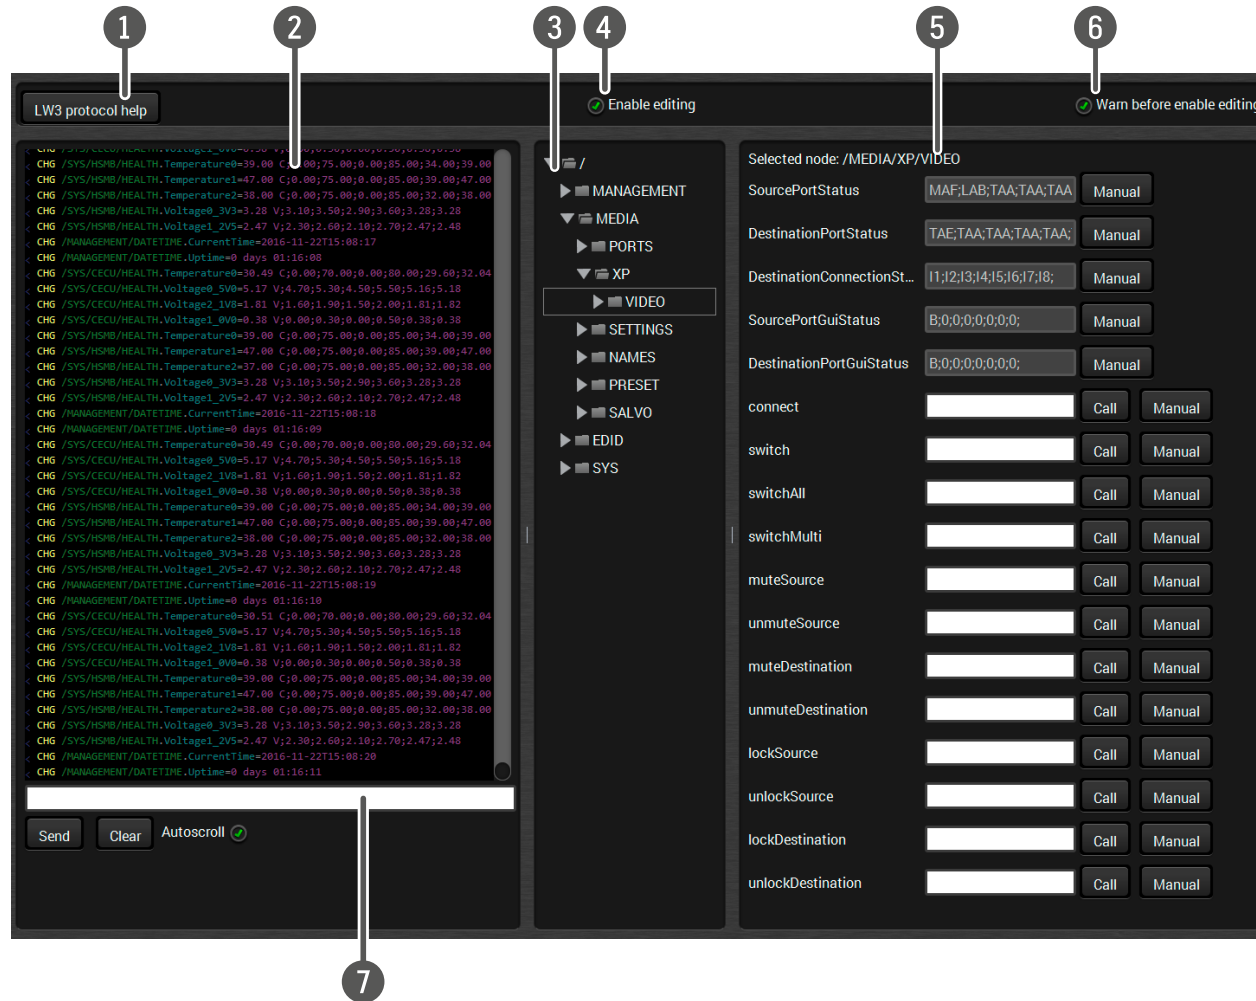

1 LW3 Protocol Help   Short description about the command types and LW3 Protocol. (LW3 Commands – Quick Summary is a brief summary)

2 Terminal Window   Commands and responses. Sent command starts with **">"** character, received response starts with **"<"** character. The content of the window can be emptied by the **Clear** button. If the **Autoscroll** option is ticked, the list is scrolled automatically when a new line is added. Place the mouse cursor on a line to display the date and time stamp in a Hint field.

3 Protocol Tree   LW3 protocol tree; select an item to see its content.

4 Edit Mode   The default appearance is the **Edit mode**. If the option is unticked the values or parameters cannot be changed.

5 Node List   Parameters and nodes of the selected item are shown.

6 Warn Option   The LDC can be set to warn the user before enable the **Edit mode**.

7 Command Line   Type the desired command and execute it by the **Send** button.

7

LW2 Programmers' Reference

The device can be controlled through a reduced command set of LW2 protocol commands to ensure the compatibility with other Lightware products. The supported LW2 commands are described in this chapter.

▶ LW2 PROTOCOL DESCRIPTION
▶ ROUTER STATUS COMMANDS
▶ CROSSPOINT OPERATIONS
▶ PRESET HANDLING
▶ COMMANDS - QUICK SUMMARY

7.1. LW2 Protocol Description

Communication

Below listed command can be sent to the device in RAW format via the **TCP/IP port no. 10001**.

The device accepts commands surrounded by curly brackets - { } - and responds data surrounded by round brackets - ( ) - only if a command was successfully executed.

Format	Explanation
<in>	Input number in 1 or 2 digit ASCII format (01, 5, 07, 16, etc.)
<out>	Output number in 1 or 2 digit ASCII format
<in²>	Input number in 2 digit ASCII format (01, 02, 10, 12 etc.)
<out²>	Output number in 2 digit ASCII format (01, 02, 10, 12 etc.)
<loc>	Location number in 1, 2 or 3 digit ASCII format
<id>	id number in 1 or 2 digit ASCII format
<id²>	id number in 2 digit ASCII format
CrLf	Carriage return, Line feed (0x0D, 0x0A)
•	Space character (0x20)
→	Each command issued by the controller
←	Each response received from the router

7.2. Router Status Commands

7.2.1. View Product Type

Description: Identification of the device. Type 'i' or 'I' then the device responds its name.

Format		Example	
Command	{I}	→	{i}
Response	(<PRODUCT_TYPE>)CrLf	←	(I:MX2-8X8-HDMI2-AUDIO)CrLf

7.2.2. View Serial Number

Description: The device responds its 8-digit serial number.

Format		Example	
Command	{S}	→	{s}
Response	(SN:<SERIAL_N>)CrLf	←	(SN:00004272)CrLf

7.2.3. View the Installed Firmware

Description: View the installed firmware package version. To view the firmware version of the controller see the {FC} command.

Format	Example
Command {F}	→ {f}
Response (FW:<FW_VER><s>)CrLf	← (FW:1.4.1b1)CrLf

7.2.4. View CPU Firmware Compile Time

Description: Shows the CPU firmware compile time.

Format	Example
Command {CT}	→ {ct}
Response (Compiled:<DATE>●<TIME>) CrLf	← (Compiled: Jan 31 2017 18:46:02)CrLf

Legend:

Identifier	Parameter
<DATE>	Month, day and year
<TIME>	Hours, minutes and seconds

Explanation: The firmware was made on 31st January, 2017 at 18:46:02.

7.2.5. View Firmware of the Controller

Description: Shows the firmware package version of the installed controller.

Format	Example
Command {FC}	→ {fc}
Response (CF●<DESC>)CrLf	← (MX-CPU2 FW:1.4.1b1 r80)CrLf

Explanation: The firmware of the MX-CPU2 processor is shown.

7.2.6. View Installed Motherboard

Description: Shows the hardware name and revision of the installed motherboard.

Format	Example
Command {IS}	→ {is}
Response (SL#●0●<MB_DESC>)CrLf (SL●END)CrLf	← (SL# 0 MX2-8X8-HDMI20-AUDIO V11_AAA0)CrLf ← (SL END)

Explanation: The matrix reports its motherboard.

7.2.7. View Crosspoint Size

Description: Shows the physical crosspoint size.

Format	Example
Command {GETSIZE}	→ {getsize}
Response (SIZE=<size>)CrLf	← (SIZE=8x8)CrLf

Explanation: The matrix reports that it has an 8x8 crosspoint.

7.2.8. View Router's Health

Description: Queries health status. The response depends on the frame type.

Format	Example
Command {ST}	→ {st}
Response (ST●<DESC>)CrLf	← (ST CPU 3.3V 5.00V 3.00V 5.00V)CrLf

Explanation: Internal voltages, temperature and fan speeds shown

7.2.9. Query Control Protocol (RS-232)

Description: The matrix can be controlled by different control protocols on the RS-232 port. This command queries the active protocol for the used control interface.

ATTENTION! Be aware that different control interfaces can use different protocols. E.g. the Ethernet interface can use the LW3 protocol while the Serial interface uses P#2 protocol at the same time.

Format	Example
Command {P_?}	→ {p_?}
Response (CURRENT●PROTOCOL●= ●#<protocol>)CrLf	← (CURRENT PROTOCOL = #1)CrLf

Explanation: The matrix communicates with LW2 protocol via the RS-232 port.

Possible settings:

<protocol>	Control protocol
1	LW2 protocol
2	P#2 protocol

ATTENTION! The response shows only the active protocol for the interface that was used to send the command!

7.3. Crosspoint Operations

7.3.1. Switch an Input to an Output

Description: Switch input <in> to output <out>.

Format		Example	
Command	{<in>@<out>}	→	{1@1}
Response	(O<out²>●I<in²>)CrLf	←	(O01 I01)CrLf

Explanation 1: Input 1 is switched to output 1.

Format		Example	
Command	{<in>@<out>}	→	{2@4}
Response	(1LO<out²>)CrLf	←	(1LO04)CrLf

Explanation 2: Input 2 to output 4 switch is not made because output 4 is locked.

> INFO: The response for this command does not show if the output is muted. To check the mute status a separate query has to be used like {VC}. See View Connections of all Outputs section.

> INFO: To achieve multiple switches executed together, see the next section.

7.3.2. Switch an Input to All Outputs

Description: Switching a certain input to all outputs.

Format		Example	
Command	{<in>@O}	→	{1@O}
Response	(ALL●<O1>●<O2>●<O3>●<O4>●<O5>●<O6>●<O7>●<O8>●)CrLf	←	(ALL 01 01 01 01 01 01 01 01)

Explanation: Input 1 is switched to all the outputs. <O1> - <O8> mean the output ports and the displayed two-digit number (01 in the example) shows the port number of the currently switched input port.

7.3.3. Batch Switch Outputs

Description: The matrix is able to switch multiple outputs exactly at the same time. To do this, the normal switch commands have to be used. If the switch commands arrive at the router with less than 10 milliseconds delay, then the router collects the commands and changes the output connections together.

Required circumstances:

- Switch commands have this format: {<in>@<out>}{<in>@<out>}
- The delay between two '}' characters must be below 10 milliseconds
- No other command or junk character is allowed between switch commands
- Affected outputs must not be locked

If any of the above circumstances fail, then the commands will be processed separately and the output connections will change on by one.

> **ATTENTION!** The delay timeout applies for the receiving time of characters. Please note that if LAN connection is used then the network may cause additional delays. This could result that batch switching does not occur.

Below example shows a command that resulted batch switching:

One by one commands	Batch commands
→ {02@01}	→ {02@01}{05@04}
← (O01 I02)CrLf	← (O01 I02)CrLf
→ {05@04}	← (O04 I05)CrLf
← (O04 I05)CrLf	

The below example shows a command that does not resulted batch switching because another command has been inserted:

One by one commands	Batch commands
→ {02@01}	→ {02@01}{+06}{05@04}
← (O01 I02)CrLf	← (O01 I02)CrLf
→ {+06}	→ (0MT06)CrLf
← (0MT06)CrLf	← (O04 I05)CrLf
→ {05@04}	
← (O04 I05)CrLf	

> INFO: The response does not show if batch switching happened or not. This assures that a third party controller does not get unknown responses.

7.3.4. View the Connection of an Output Port

Description: See the connected input port number of an output port.

Format		Example
Command	{?<out>}	→ {?1}
Response	(O<out²> ●I<in²>)CrLf	← (O01 I03)CrLf

Explanation: Input 3 is switched to output 1.

7.3.5. View Connections of all Outputs

Description: Viewing all outputs' connection showing the connected input port.

Legend 1: All <Ox> indexes show the corresponding output's connection state. If value <O5> equals 04 it means that output 5 is connected to input 4. All <Ox> indexes are two digit ASCII characters (01, 02, 04, etc.).

Format		Example 1
Command	{VC}	→ {vc}
Response	(ALL●<O1>●<O2>●<O3> ●<O4>●<O5>●<O6>●<O7> ●<O8>)CrLf	← (ALL 02 02 02 05 05 05 08 08)CrLf

Explanation 1: Viewing connection for all outputs. Input 2 is connected to outputs 1, 2 and 3. Input 5 is connected to outputs 4, 5 and 6. Input 8 is connected to outputs 7 and 8.

> **INFO:** If an output is locked, muted, or both locked and muted, the response format changes. If outputs are muted you get a letter 'M', if locked a letter 'L' and if muted and locked at the same time 'U' before the 2 digit numbers.

Format		Example 2
Command	{VC}	→ {vc}
Response	(ALL●<O1>●<O2>●<O3>●<O4>●<O5>●<O6>● <O7> ●<O8>)CrLf	← (ALL M02 L02 U02 05 05 05 08 08)CrLf

Legend 2: Any <Ox> indexes can be a two digit number, or there can be a leading character showing the mute and/or lock state for the corresponding output.

Index	Legend	Explanation
<Ox>	<in²>	<Ox> is connected to <in²>, <Ox> neither muted nor locked.
<Ox>	M<in²>	<Ox> is connected to <in²>, <Ox> is muted, and unlocked.
<Ox>	L<in²>	<Ox> is connected to <in²>, <Ox> is not muted, but locked.
<Ox>	U<in²>	<Ox> is connected to <in²>, <Ox> is muted and locked.

Explanation 2: Viewing connection for all outputs. Input 2 is connected to outputs 1, 2 and 3. Output 1 is muted. Output 2 is locked. Output 3 is muted and locked. Input 5 is connected to outputs 4, 5 and 6. Input 8 is connected to outputs 7 and 8.

7.3.6. View Mutes on all Outputs

Description: Viewing all outputs' mute states.

Legend: All <Mx> indexes are one digit numbers, showing the mute state for the corresponding output. If <Mx> equals 0 the output x is unmuted. If <Mx> equals 1, the output x is muted.

Format		Example
Command	{VM}	→ {vm}
Response	(MUT●<M1>●<M2>●<M3> ●<M4>●<M5>●<M6>●<M7> ●<M8>)CrLf	← (MUT 1 0 1 1 0 0 0 0)CrLf

Explanation: Output 1, 3 and 4 are muted, the other outputs are not muted.

7.3.7. Mute Specified Output

Description: Mute output <out>. The output signal is turned off.

Format		Example
Command	{#<out>}	→ {#03}
Response	(1MT<out²>)CrLf	← (1MT03)CrLf

Explanation: Output 3 is muted. No signal is present on output 3 now.

> INFO: Muting does not change the crosspoint's state but disables the output itself. This way the last connection can be easily restored with an unmute command.

> INFO: Switching a muted output does not unmute the output.

7.3.8. Unmute Specified Output

Description: Unmute output <out>.

Format		Example
Command	{+<out>}	→ {+03}
Response	(0MT<out²>)CrLf	← (0MT03)CrLf

Explanation: Output 3 is unmuted. Now output 3 is switched to the input it was connected to prior to the mute command.

> **ATTENTION!** Unmuting an output makes the previous connection active as the crosspoint's state has not been changed with the muting command, only the output was disabled.

7.3.9. Lock Specified Output

Description: Lock output <out>. Output's state cannot be changed until unlocking.

Format	Example
Command {#><out>}	→ {#>05}
Response (1LO<out²>)CrLf	← (1LO05)CrLf

Explanation: Output 5 is locked.

7.3.10. Unlock a Specified Output

Description: Unlock output <out>. The connection on output can be changed.

Format	Example
Command {+<<out>}	→ {+<05}
Response (0LO<out²>)CrLf	← (0LO05)CrLf

Explanation: Output 5 is unlocked.

INFO: The matrix issues the above response regardless of the previous state of the output (either it was locked or unlocked).

7.4. Preset Handling

7.4.1. Load a Preset

Description: Recall a saved preset.

Format	Example
Command {%<preset>}	→ {%Meeting_1}
Response (%<preset>)CrLf	← (%Meeting_1)CrLf

Explanation: Preset called "Meeting_1" has been loaded and applied.

7.5. Commands - Quick Summary

Router Status Commands

Operation	See in section	Command
View Product Type	7.2.1	{i}
View Serial Number	7.2.2	{S}
View the Installed Firmware	7.2.3	{F}
View CPU Firmware Compile Time	7.2.4	{CT}
View Firmware of the Controller	7.2.5	{FC}
View Installed Motherboard	7.2.6	{IS}
View Crosspoint Size	7.2.7	{GETSIZE}
View Router's Health	7.2.8	{ST}
Query Control Protocol (RS-232)	7.2.9	{P_?}

Crosspoint Operations

Operation	See in section	Command
Switch an Input to an Output	7.3.1	{<in>@<out>}
Switch an Input to All Outputs	7.3.2	{<in>@O}
Batch Switch Outputs	7.3.3	{<in>@<out>}{<in>@<out>}
View the Connection of an Output Port	7.3.4	{?<out>}
View Connections of all Outputs	7.3.5	{VC}
View Mutes on all Outputs	7.3.6	{VM}
Mute Specified Output	7.3.7	{#<out>}
Unmute Specified Output	7.3.8	{+<out>}
Lock Specified Output	7.3.9	{#><out>}
Unlock a Specified Output	7.3.10	{+<<out>}

Preset Handling

Operation	See in section	Command
Load a Preset	7.4.1	{%<preset_name>}

LW3 Programmers' Reference

The device can be controlled through Lightware 3 (LW3) protocol commands to ensure the compatibility with other Lightware products. The supported LW3 commands are described in this chapter.

8.1. Overview

The Lightware Protocol #3 (LW3) is implemented in almost all new Lightware devices (matrix switchers, signal extenders and distribution amplifiers) since 2012. The protocol is ASCII-based and all commands are terminated with a carriage return (Cr, '\r') and line feed (Lf, '\n') pair. It is organized as a tree structure that provides outstanding flexibility and user-friendly handling with 'nodes', 'properties' and 'methods'. The **Advanced View** of the Lightware Device Controller software is the perfect tool for browsing and learning how the LW3 protocol can be used in practice.

8.2. Protocol Rules

8.2.1. LW3 Tree Structure and Command Structure (examples)
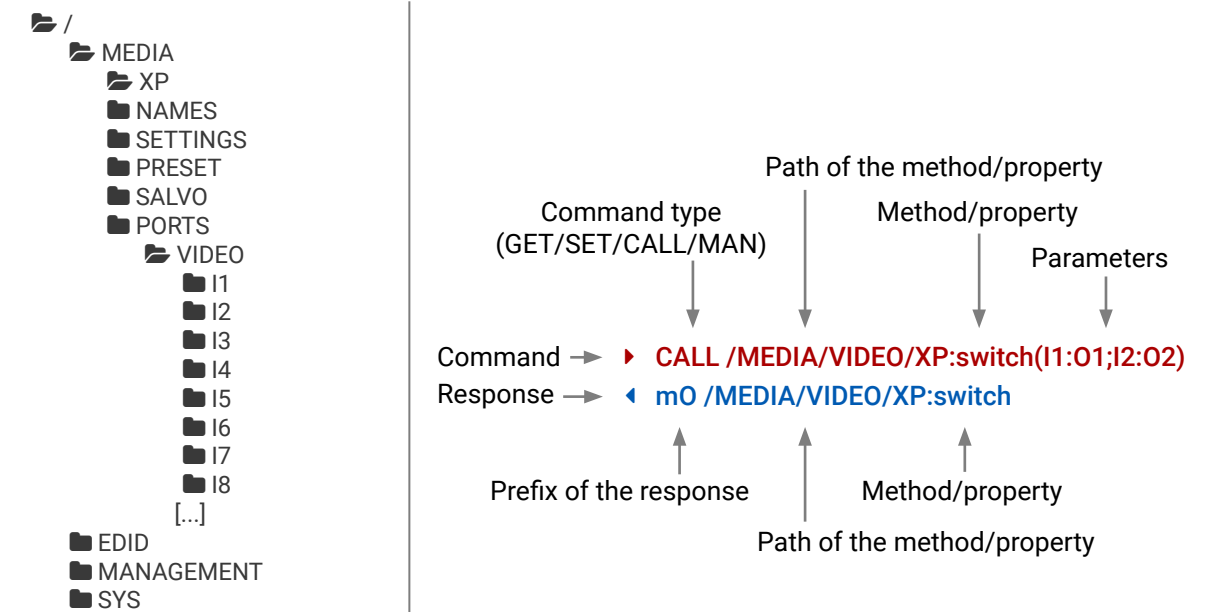

8.2.2. General Rules

- All names and parameters are **case-sensitive**.
- The nodes are separated by a slash ('/') character.
- The node name can contain the elements of the English alphabet and numbers.
- Use the **TCP port no. 6107** when using LW3 protocol over Ethernet.
- When a command is issued by the device, the received response cannot be processed by the CPU.
- The path of a node has to contain all parent nodes from the root node.

8.2.3. Command Types

GET command

The **GET** command can be used to get the child nodes, properties and methods of a specific node. It can also be used to get the value of a property. Use the dot character (.) when addressing a property:

▸ GET /.SerialNumber

◂ Pr /.SerialNumber=87654321

GETALL command

The **GETALL** command can be used to get all child nodes, properties and methods of a node with one command.

▸ GETALL /MEDIA/UART

◂ ns /MEDIA/UART/P1

◂ ns /MEDIA/UART/P2

◂ pr /MEDIA/UART.PortCount=2

◂ pr /MEDIA/UART.PortUi=P1:12209;P2:12224

◂ pr /MEDIA/UART.P1=Local RS-232

◂ pr /MEDIA/UART.P2=TPS out RS-232

SET command

The **SET** command can be used to modify the value of a property. Use the dot character (.) when addressing the property:

▸ SET /MEDIA/VIDEO/I1.ColorSpaceMode=0

◂ pw /MEDIA/VIDEO/I1.ColorSpaceMode=0

CALL command

A method can be invoked by the **CALL** command. Use the colon character (:) when addressing the method:

▸ CALL /MEDIA/VIDEO/XP:switch(I1:O1)

◂ mO /MEDIA/VIDEO/XP:switch

MAN command

The manual is a human readable text that describes the syntax and provides a hint for how to use the primitives. For every node, property and method in the tree there is a manual, type the MAN command to get the manual:

▸ MAN /MEDIA/VIDEO/O1.Pwr5vMode

◂ pm /MEDIA/VIDEO/O1.Pwr5vMode ["0" | "1" | "2"] 0 - Auto, 1 - Always On, 2 - Always Off

8.2.4. Prefix Summary

> DEFINITION: The prefix is a 2-character long code that describes the type of the response.

The following prefixes are defined in the LW3 protocol:

Prefix	Description	Prefix	Description
n-	a node	pm	a manual for the property
nE	an error for a node	m-	a method
nm	a manual for a node	mO	a response after a success method execution
ns	a child node of a node	mF	a response after a failed method execution
pr	a read-only property	mE	an error for a method
pw	read-write property	mm	a manual for a method
pE	an error for the property		

8.2.5. Error Messages

There are several error messages defined in the LW3 protocol, all of them have a unique error number.

▸ CALL /MEDIA/VIDEO/XP:switch(IA:O1)

◂ mE /MEDIA/VIDEO/XP:switch %E004:Invalid value

8.2.6. Escaping

> DEFINITION: An escape sequence is a sequence of characters that does not represent itself when used inside a character or string literal, but is translated into another character or a sequence of characters.

Property values and method parameters can contain characters which are used as control characters in the protocol. They must be escaped. The escape character is the backslash ('\') and escaping means injecting a backslash before the character that should be escaped (like in C language).

Control characters are the followings: \ { } # % ( ) \r \n \t

The **original** message: **CALL /MEDIA/UART/P1:sendMessage(Set(01))**

The **escaped** message: **CALL /MEDIA/UART/P1:sendMessage(Set\(01\))**

8.2.7. Signature

> DEFINITION: The signature is a four-digit-long hexadecimal value that can be optionally placed before every command to keep a command and the corresponding responses together as a group.

Each line is terminated with a carriage return (Cr, '\r') and line feed (Lf, '\n') characters. In several cases the number of the lines in the response cannot be determined in advance, e.g. the client is intended waiting for the whole response and also wants to be sure, that the received lines belong together and to the same command. In these cases, a special feature the 'signature' can be used. In these cases, the response to that particular command will also be preceded by the signature, and the corresponding lines will be between brackets:

▶ 1700#GET /EDID.*

◀ {1700

◀ pr /EDID.EdidStatus=F89:E1;D1:E2;D1:E3;D1:E4;F89:E5

◀ m- /EDID:copy

◀ m- /EDID:delete

◀ m- /EDID:reset

◀ m- /EDID:switch

◀ m- /EDID:switchAll

◀ }

> INFO: The lines of the signature are also Cr and Lf terminated.

8.2.8. Subscription

> DEFINITION: Subscribe to a node means that the user will get a notification if any of the properties of the node is changed.

A user can subscribe to any node. These notifications are asynchronous messages and they are useful to keep the client application up to date, without receiving any unwanted information. When the user does not want to be informed about the changes anymore, he can simply unsubscribe from the node.

> **ATTENTION!** The subscriptions are handled separately for connections. Hence, if the connection is terminated all registered subscriptions are deleted. After closing a connection the subscribe command has to be sent in order to get the notifications of the changes on that connection.

Subscribe to a Node

▶ OPEN /MEDIA/VIDEO

◀ o- /MEDIA/VIDEO

Get the Active Subscriptions

▶ OPEN

◀ o- /MEDIA/VIDEO

◀ o- /EDID

◀ o- /DISCOVERY

Subscribe to Multiple Nodes

▶ OPEN /MEDIA/VIDEO/*

◀ o- /MEDIA/VIDEO/*

Unsubscribe from a Node

▶ CLOSE /MEDIA/VIDEO

◀ c- /MEDIA/VIDEO

Unsubscribe from Multiple Nodes

▶ CLOSE /MEDIA/VIDEO/*

◀ c- /MEDIA/VIDEO/*

8.2.9. Notifications about the Changes of the Properties

When the value of a property is changed and the user is subscribed to the node, which the property belongs to, an asynchronous notification is generated. This is notification is called as the 'change message'. The format of such a message is very similar to the response for the **GET** command:

◀ CHG /EDID.EdidStatus=F48:E1

A Short Example of How to Use the Subscription

There are two independent users controlling the device through two independent connections (**Connection #1** and **Connection #2**). The events in the rows occur after each other.

▶ OPEN /MEDIA/VIDEO/QUALITY

◀ o- /MEDIA/VIDEO/QUALITY   } Connection #1

▶ GET /MEDIA/VIDEO/Quality.QualityMode

◀ pm /MEDIA/VIDEO/QUALITY.QualityMode=graphic

▶ GET /MEDIA/VIDEO/Quality.QualityMode

◀ pm /MEDIA/VIDEO/QUALITY.QualityMode=graphic   } Connection #2

▶ SET /MEDIA/VIDEO/Quality.QualityMode=video

◀ pw /MEDIA/VIDEO/QUALITY.QualityMode=video

◀ CHG /MEDIA/VIDEO/QUALITY.QualityMode=video   → Connection #1

Explanation: The first user (**Connection #1**) set a subscription to a node. Later the other user (**Connection #2**) made a change, and thanks for the subscription, the first user got a notification about the change.

8.2.10. Legend for the Control Commands

Format	Description
<in>	Input port number
<out>	Output port number
<port>	Input or output port number
<loc>	Location number
<parameter>	Variable, which is defined and described in the command
<expression>	Batched parameters: the underline means that more expressions or parameters can be placed by using a semicolon, e.g. **I2;I4;I5** or **F27:E1;F47:E2**
▶	Sent command
◀	Received response
·	Space character

8.3. System Commands

8.3.1. Querying the Product Name

The name of the product is a read-only parameter and cannot be modified.

Command and Response

▸ GET·/.ProductName

◂ pr·/.ProductName=<Product_name>

Parameters

The <Product_name> is the type of the device: read-only parameter and cannot be modified.

Example

▸ GET /.ProductName

◂ pr /.ProductName=MX2-24x24-DH-12DPi-R

8.3.2. Setting the Device Label

The device label can be changed to a custom text which is displayed in many windows of the LDC.

▌ **ATTENTION!** This writable parameter is not the same as the **ProductName** parameter.

Command and Response

▸ SET·/MANAGEMENT/UID/DeviceLabel=<Custom_name>

◂ pw·/MANAGEMENT/UID/DeviceLabel=<Custom_name>

Parameters

The <Custom_name> may consist of ASCII characters and can be 32 characters length. Longer names are truncated.

Example

▸ SET /MANAGEMENT/UID.DeviceLabel=MX2_Control_room

◂ pw /MANAGEMENT/UID.DeviceLabel=MX2_Control_room

8.3.3. Querying the Serial Number

Command and Response

▸ GET·/.SerialNumber

◂ pr·/.SerialNumber=<serial_nr>

Example

▸ GET /.SerialNumber

◂ pr /.SerialNumber=87654321

8.3.4. Resetting the Matrix

The matrix can be restarted – the current connections (LAN, RS-232) will be terminated.

Command and Response

▸ CALL·/SYS:softReset()

◂ mO·/SYS:softReset=

Example

▸ CALL /SYS:softReset()

◂ mO /SYS:softReset=

8.3.5. Restoring the Factory Default Settings

The device is restarted, current connections are terminated, and the default settings are restored. See the complete list in Factory Default Settings section.

Command and Response

▸ CALL·/SYS:factoryDefaults()

◂ mO·/SYS:factoryDefaults=

Example

▸ CALL /SYS:factoryDefaults()

◂ mO /SYS:factoryDefaults=

8.3.6. Switching to Standby Mode

The video transmission is disabled, the LCD is switched off, but remote connections (LAN, RS-232) remain enabled in standby mode. See the System Settings Menu and the next section.

Command and Response

▸ CALL·/MANAGEMENT/POWER:standby()

◂ mO·/MANAGEMENT/POWER:standby=

Example

▸ CALL /MANAGEMENT/POWER:standby()

◂ mO /MANAGEMENT/POWER:standby=

8.3.7. Switching to Normal Mode

If the matrix is in Standby mode, it can be switched back to **Normal mode** as follows:

Command and Response

▸ CALL·/MANAGEMENT/POWER:wakeUp()

◂ mO·/MANAGEMENT/POWER:wakeUp=

Example

▸ CALL /MANAGEMENT/POWER:wakeUp()

◂ mO /MANAGEMENT/POWER:wakeUp=

8.4. Switching and Crosspoint Settings

> INFO: The current setting can be queried by using the GET command.

8.4.1. Query the Video Crosspoint State

Command and Response

▶ GET·/MEDIA/XP/VIDEO.DestinationConnectionStatus
◀ pr·/MEDIA/XP/VIDEO.DestinationConnectionStatus=<out1_state>;<out2_state>;...;<out8_state>

Parameters

The <out#_state> parameters mean the output ports (O1, O2 etc.) one after the other. The value of the parameter shows the input port switched to the given output port.

Example

▶ GET /MEDIA/XP/VIDEO.DestinationConnectionStatus
◀ pr /MEDIA/XP/VIDEO.
DestinationConnectionStatus=I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;

I1 input port is connected to all output ports.

8.4.2. Switching an Input to an Output

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:switch(<in>:<out>)
◀ mO·/MEDIA/XP/VIDEO:switch=OK

Example

▶ CALL /MEDIA/XP/VIDEO:switch(I4:O1)
◀ mO /MEDIA/XP/VIDEO:switch=OK

8.4.3. Switching an Input to All Outputs

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:switchAll(<in>)
◀ mO·/MEDIA/XP/VIDEO:switchAll=OK

Example

▶ CALL /MEDIA/XP/VIDEO:switchAll(I1)
◀ mO /MEDIA/XP/VIDEO:switchAll=OK

> TIPS AND TRICKS: All output ports can be disconnected by the '0' value:
> CALL /MEDIA/XP/VIDEO:switchAll(0).

8.4.4. Multiple Switching

The whole crosspoint can be set by sending one command as follows.

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:switchMulti(<out1_source>;<out2_source>;...;<out8_source>)
◀ mO·/MEDIA/XP/VIDEO:switchMulti=OK

The source is not required to set on all output ports (see the **Example2**).

Parameters

The <out#_source> parameters mean the output ports one after the other. The value of the parameter shows the input port switched to the given output port.

Example1

▶ CALL /MEDIA/XP/VIDEO:switchMulti(I1;I2;I3;I4;I5;I6;I7;I8)
◀ mO /MEDIA/XP/VIDEO:switchMulti=OK

Example2

▶ CALL /MEDIA/XP/VIDEO:switchMulti(I1;I2;;;I5)
◀ mO /MEDIA/XP/VIDEO:switchMulti=OK

8.5. Video Input Port Settings (HDMI and DisplayPort)

▌ INFO: The current setting can be queried by using the GET command.

8.5.1. Querying the Status of the Source Ports

Command and Response

▸ GET·/MEDIA/XP/VIDEO.SourcePortStatus

◂ pr·/MEDIA/XP/VIDEO.SourcePortStatus=<in1_state>;<in2_state>;...;<in_state>

The responses contain one letter and a 1-byte long HEX code showing the current state of the input ports.

Example

▸ GET /MEDIA/XP/VIDEO.SourcePortStatus

◂ pr /MEDIA/XP/VIDEO.SourcePortStatus=TEF;TAA;TAA;TAA;TAA;TAA;TAA;TAA

Parameters

Letter (Character 1)		
	Mute state	**Lock state**
T	Unmuted	Unlocked
L	Unmuted	Locked
M	Muted	Unlocked
U	Muted	Locked

T A F

Letter → Mute / Lock status

Byte 1:
- Signal present / Connection status
- Embedded audio / HDCP status

	Byte 1			
	Character 2		Character 3	
	BIT 7-6	BIT 5-4	BIT 3-2	BIT 1-0
	Embedded audio status	**HDCP status**	**Signal present status**	**Connection status**
0 0	Unknown			
0 1	Reserved			
1 0	No embedded audio	Not encrypted	No signal	Not connected
1 1	Embedded audio presents	Encrypted	Signal presents	Connected

Example and Explanation (TEF)

T	E		F	
Unlocked, Unmuted	1 1	1 0	1 1	1 1
	Embedded audio presents	Not encrypted	Signal presents	Connected

The Most Common Received Port Status Responses

	T	A		A	
TAA	Unlocked, Unmuted	1 0	1 0	1 0	1 0
		No embedded audio	Not encrypted	No signal	Not connected

	T	A		B	
TAB	Unlocked, Unmuted	1 0	1 0	1 0	1 1
		No embedded audio	Not encrypted	No signal	Connected

	T	A		F	
TAF	Unlocked, Unmuted	1 0	1 0	1 1	1 1
		No embedded audio	Not encrypted	Signal presents	Connected

	T	E		F	
TEF	Unlocked, Unmuted	1 1	1 0	1 1	1 1
		Embedded audio presents	Not encrypted	Signal presents	Connected

	T	B		F	
TBF	Unlocked, Unmuted	1 0	1 1	1 1	1 1
		No embedded audio	Encrypted	Signal presents	Connected

	T	F		F	
TFF	Unlocked, Unmuted	1 1	1 1	1 1	1 1
		Embedded audio presents	Encrypted	Signal presents	Connected

8.5.2. Muting an Input Port

Command and Response

▸ CALL·/MEDIA/XPVIDEO:muteSource(<in>)

◂ mO·/MEDIA/XP/VIDEO:muteSource=OK

Example

▸ CALL /MEDIA/XP/VIDEO:muteSource(I1)

◂ mO /MEDIA/XP/VIDEO:muteSource=OK

8.5.3. Unmuting an Input Port

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:unmuteSource(<u><in></u>)
◀ mO·/MEDIA/XP/VIDEO:unmuteSource=OK

Example

▶ CALL /MEDIA/XP/VIDEO:unmuteSource(I1;I3)
◀ mO /MEDIA/XP/VIDEO:unmuteSource=OK

8.5.4. Locking an Input Port

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:lockSource(<u><in></u>)
◀ mO·/MEDIA/XP/VIDEO:lockSource=OK

Example

▶ CALL /MEDIA/XP/VIDEO:lockSource(I1;I2;I3)
◀ mO /MEDIA/XP/VIDEO:lockSource=OK

8.5.5. Unlocking an Input Port

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:unlockSource(<u><in></u>)
◀ mO·/MEDIA/XP/VIDEO:unlockSource=OK

Example

▶ CALL /MEDIA/XP/VIDEO:unlockSource(I1;I3)
◀ mO /MEDIA/XP/VIDEO:unlockSource=OK

8.5.6. Setting the HDCP State

This setting allows to send non-encrypted content to a non-HDCP compliant display. See more information in the HDCP Management section.

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<in>/SETTINGS.HdcpVersion=<HDCP_ver>
◀ pw·/MEDIA/PORTS/VIDEO/<in>/SETTINGS.HdcpVersion=<HDCP_ver>

Parameters

Identifier	Parameter description	Parameter values
<HDCP_ver>	HDCP setting	**0:** HDCP encryption is disabled **1 *:** HDCP 1.4 encryption is enabled **2:** HDCP 2.2 is enabled **3:** High value mode: Any HDCP version is allowed on the input but the incoming signal is internally converted up to HDCP 2.2 always, thus, the signal cannot be switched to HDCP 1.4 sinks.

*The availability of this setting depends on the hardware version of the input board (V1x_) of the selected HDMI port. The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/SETTINGS.HdcpVersion=3
◀ pw /MEDIA/PORTS/VIDEO/I1/SETTINGS.HdcpVersion=3

8.5.7. Setting the Audio Mode

Command and Response

▸ SET·/MEDIA/PORTS/VIDEO/\<in>/EMBEDDEDAUDIO.AudioMode=\<audio_mode>

◂ pw·/MEDIA/PORTS/VIDEO/\<in>/EMBEDDEDAUDIO.AudioMode=\<audio_mode>

Parameters

Identifier	Parameter description	Parameter values
\<audio_mode>	The current audio mode	**OFF:** no audio in the video stream **HDMI:** the original audio is embedded in the video stream **ANALOG *:** the analog audio of the input port is embedded in the video stream *Analog audio properties appears only in **-Audio** suffixed models, where there is an analog audio port beside the HDMI port.

Example

▸ SET /MEDIA/PORTS/VIDEO/I1/EMBEDDEDAUDIO.AudioMode=OFF

◂ pw /MEDIA/PORTS/VIDEO/I1/EMBEDDEDAUDIO.AudioMode=OFF

> INFO: In case of **-A** or **-Audio** suffixed models, modifying the /MEDIA/PORTS/VIDEO/\<in>/EMBEDDEDAUDIO.AudioMode=\<audio_mode> property will change the /MEDIA/PORTS/VIDEO/\<in>/ANALOGAUDIO.AudioMode=\<audio_mode> property.

8.5.8. Sending CEC Commands Towards the Source

> INFO: The hidden first 2 bit of the CEC command is static (always 04), it refers to the logical address of the sender and the addressee. **0:** sender is a **TV**; **4:** the addressee is the **Playback Device 1**.

8.5.8.1. Sending an OSD String

Sending the OSD string consists of two steps. First, set the CEC.OsdString property with the desired text, after that, call the CEC.send(set_osd) method.

Step 1 – Setting the CEC.OsdString Property

Command and Response

▸ SET·/MEDIA/PORTS/\<in>/CEC.OsdString=\<text>

◂ pw·/MEDIA/PORTS/\<in>/CEC.OsdString=\<text>

The following characters are allowed as \<text> parameter: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 14 characters.

Example

▸ SET /MEDIA/PORTS/VIDEO/I1/CEC.OsdString=Lightware

◂ pw /MEDIA/PORTS/VIDEO/I1/CEC.OsdString=Lightware

Step 2 – Call the CEC.send(set_osd) method

Command and Response

▸ CALL·/MEDIA/PORTS/VIDEO/\<in>/CEC:send(set_osd)

◂ mO·/MEDIA/PORTS/VIDEO/\<in>/CEC:send=OK

Example

▸ CALL /MEDIA/PORTS/VIDEO/I1/CEC:send(set_osd)

◂ mO /MEDIA/PORTS/VIDEO/I1/CEC:send=OK

8.5.8.2. Sending a CEC Command in Text Format

Command and Response

▸ CALL·/MEDIA/PORTS/VIDEO/\<in>/CEC:send(\<command>)

◂ mO·/MEDIA/PORTS/VIDEO/\<in>/CEC:send=OK

Example

▸ CALL /MEDIA/PORTS/VIDEO/I1/CEC:send(power_on)

◂ mO /MEDIA/PORTS/VIDEO/I1/CEC:send=OK

The followings are accepted as \<command>:

image_view_on	standby	ok	back	up
down	left	right	root_menu	setup_menu
contents_menu	favorite_menu	media_top_menu	media_context_menu	number_0
number_1	number_2	number_3	number_4	number_5
number_6	number_7	number_8	number_9	dot
enter	clear	channel_up	channel_down	sound_select
input_select	display_info	power_legacy	page_up	page_down
volume_up	volume_down	mute_toggle	mute	unmute
play	stop	pause	record	rewind
fast_forward	eject	skip_forward	skip_backward	3d_mode
stop_record	pause_record	play_forward	play_reverse	select_next_media
select_media_1	select_media_2	select_media_3	select_media_4	select_media_5
power_toggle	power_on	power_off	stop_function	f1
f2	f3	f4		

8.5.8.3. Sending a CEC Command in Hexadecimal Format

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/<in>/CEC:sendHex(<hex_command>)
◀ mO·/MEDIA/PORTS/VIDEO/<in>/CEC:sendHex=OK

Accepted <hex_command> is max. 30 character (15 byte) long in hexadecimal format.

Example

▶ CALL /MEDIA/PORTS/VIDEO/I1/CEC:sendHex(87 00 E0 91)
◀ mO /MEDIA/PORTS/VIDEO/I1/CEC:sendHex=OK

8.6. DisplayPort Input Settings

The current setting can be queried by using the GET command.

> DIFFERENCE: DisplayPort settings are available in certain models, **-D** letter the model name refers to that (see the Model Comparison table).

8.6.1. Setting the Maximum Lane Number

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLaneCount=<lane>
◀ pw·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLaneCount=<lane>

Parameters

Identifier	Parameter description	Parameter values
<lane>	DisplayPort data transmission proceeds through the lanes. This defines the maximum used lane number.	**1:** One lane is able transmit 5.4 Gbps data. **2:** Two lane is able transmit 10.8 Gbps data. **4:** Four lane is able transmit 21.6 Gbps data.

Example

▶ SET /MEDIA/PORTS/VIDEO/I2/SETTINGS.DpMaxLaneCount=4
◀ pw /MEDIA/PORTS/VIDEO/I2/SETTINGS.DpMaxLaneCount=4

8.6.2. Setting the Maximum Link Data Rate

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLinkRate=<data_rate>
◀ pw·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLinkRatet=<data_rate>

Parameters

Identifier	Parameter description	Parameter values
<data_rate>	The maximum data rate per lane.	**RBR:** Reduced Bit Rate uses 1.62 Gbps bandwidth. **HBR:** High Bit Rate uses 2.70 Gbps bandwidth. **HBR2:** High Bit Rate2 uses 5.40 Gbps bandwidth.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/SETTINGS.DpMaxLinkRate=HBR2
◀ pw /MEDIA/PORTS/VIDEO/I1/SETTINGS.DpMaxLinkRate=HBR2

8.6.3. Enable the Test Pattern

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.TpgMode=<tpg_status>
◀ pw·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.TpgMode=<tpg_status>

Parameters

Identifier	Parameter description	Parameter values
<tpg_status>	The testpattern is enabled or disabled.	**0:** The testpattern is enabled. **1:** The testpattern is disabled.

Example

▶ SET /MEDIA/PORTS/VIDEO/I2/SETTINGS.TpgMode=1
◀ pw /MEDIA/PORTS/VIDEO/I2/SETTINGS.TpgMode=1

8.6.4. Setting the Conversion Mode

> INFO: DisplayPort signals over 18Gbps will be converted down by either truncating bit depth or by converting RGB signal to YCbCr 4:2:2 12-bit signal based on user selection. The second option will not reduce the color depth rather, it results in loss of chroma information.

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.Conversion=<conversion_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.Conversion=<conversion_mode>

Parameters

Identifier	Parameter description	Parameter values
<conv_mode>	Conversion modeFO	**OFF:** The video signal is transmitted without any changing. **422:** The video converter subsamples the 4:4:4 signal to 4:2:2. **420:** The video converter subsamples the 4:4:4 signal to 4:2:0.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/SETTINGS.Conversion=OFF

◀ pw /MEDIA/PORTS/VIDEO/I1/SETTINGS.Conversion=OFF

8.6.5. Restart Link Training

This method is equal with pulling out and plug in again the DP connector.

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/I1/SETTINGS:dpLinkTrain()

◀ mO·/MEDIA/PORTS/VIDEO/I1/SETTINGS:dpLinkTrain=

Example

▶ CALL /MEDIA/PORTS/VIDEO/I1/SETTINGS:dpLinkTrain()

◀ mO /MEDIA/PORTS/VIDEO/I1/SETTINGS:dpLinkTrain=

8.7. Audio Input Port Settings

The current setting can be queried by using the GET command in all cases.

> DIFFERENCE: Audio settings are available when there is an analog audio port beside the chosen video port. **-A** or **-Audio** suffix in the model name refers to the analog audio feature (see the Model Comparison table about the analog audio availability).

8.7.1. Audio Mode Setting

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.AudioMode=<audio_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.AudioMode=<audio_mode>

Parameters

Identifier	Parameter description	Parameter values
<audio_mode>	The current audio mode	**OFF:** no audio in the video stream. **HDMI:** the original audio is embedded in the video stream **ANALOG:** the analog audio of the input port is embedded in the video stream.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.AudioMode=ANALOG

◀ pw /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.AudioMode=ANALOG

> INFO: In case of **-Audio** suffixed models, modifying the /MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.AudioMode=<audio_mode> property will change the /MEDIA·/PORTS/VIDEO/<in>/EMBEDDEDAUDIO.AudioMode=<audio_mode> property.

8.7.2. Analog Audio Input Level Settings

8.7.2.1. Setting the Balance (the Exact Value)

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Balance=<bal_value>

◀ pw·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Balance=<bal_value>

Parameters

The <bal_value> can be set between -100 and 100 (0=center, +100=right, -100=left).

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Balance=50

◀ pw /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Balance=50

8.7.2.2. Setting the Balance (by a Step Value)

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO:stepBalance(<step_value>)
◀ mO·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO:stepBalance=<step_value>

Example

▶ CALL /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO:stepBalance(10)
◀ mO /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO:stepBalance=10

Explanation

The balance of the audio signal has been increased (right channel became higher). Positive and negative values are accepted.

8.7.2.3. Setting the Mute State

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Mute=<mute_state>
◀ pw·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Mute=<mute_state>

Parameters

If the <mute_state> parameter is **0** (or **false**) the port is not muted. If the value is **1** (or **true**) the port is muted.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Mute=true
◀ pw /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Mute=true

8.7.2.4. Setting the Gain

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Gain=<gain_value>
◀ pw·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Gain=<gain_value>

Parameters

Values between -12dB and +35dB are accepted and rounded automatically.

Example

▶ SET /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Gain=5
◀ pw /MEDIA/PORTS/VIDEO/I1/ANALOGAUDIO.Gain=5

8.8. Video Output Port Settings

8.8.1. Querying the Status of the Output Ports

Command and Response

▶ GET·/MEDIA/XP/VIDEO.DestinationPortStatus
◀ pr·/MEDIA/XP/VIDEO.DestinationPortStatus=<out1_state>;<out2_state>;…; <out8_state>

The <out#_state> parameters mean the O1-O8 output ports one after the other. The value of the parameter is one letter and a 1-byte long HEX code showing the current state of the output port.

Example

▶ GET /MEDIA/XP/VIDEO.DestinationPortStatus
◀ pr /MEDIA/XP/VIDEO.DestinationPortStatus=MEF;TAA;TAA;TAA;TAA;TAA;TAA;TAA

Parameters

See the Video Input Port Settings (HDMI and DisplayPort) section.

Explanation

Cable is connected to Input 1, signal is present and not HDCP-encrypted, audio is embedded in the video. The port is unlocked, but muted.

8.8.2. Setting the Signal Type (HDMI mode)

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedSignalType=<sig_type>
◀ pw·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedSignalType=<sig_type>

Parameters

Identifier	Parameter description	Parameter values
<sig_type>	The video signal type	**DVI:** the outgoing signal format is forced to be **DVI**.
		HDMI: the outgoing signal format is forced to be **HDMI**.
		AUTO: the outgoing signal format is set **automatically** according to the audio presence in the video stream: if audio is present, the signal format is HDMI.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/SETTINGS.ForcedSignalType=HDMI
◀ pw /MEDIA/PORTS/VIDEO/O1/SETTINGS.ForcedSignalType=HDMI

8.8.3. Muting an Output

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:muteDestination(<u><out></u>)

◀ mO·/MEDIA/XP/VIDEO:muteDestination=OK

Example

▶ CALL /MEDIA/XP/VIDEO:muteDestination(O1;O3)

◀ mO /MEDIA/XP/VIDEO:muteDestination=OK

8.8.4. Unmuting an Output

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:unmuteDestination(<u><out></u>)

◀ mO·/MEDIA/XP/VIDEO:unmuteDestination=OK

Example

▶ CALL /MEDIA/XP/VIDEO:unmuteDestination(O1;O2)

◀ mO /MEDIA/XP/VIDEO:unmuteDestination=OK

8.8.5. Locking an Output

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:lockDestination(<u><out></u>)

◀ mO·/MEDIA/XP/VIDEO:lockDestination=OK

Example

▶ CALL /MEDIA/XP/VIDEO:lockDestination(O1;O4)

◀ mO /MEDIA/XP/VIDEO:lockDestination=OK

8.8.6. Unlocking an Output

Command and Response

▶ CALL·/MEDIA/XP/VIDEO:unlockDestination(<u><out></u>)

◀ mO·/MEDIA/XP/VIDEO:unlockDestination=OK

Example

▶ CALL /MEDIA/XP/VIDEO:unlockDestination(O1;O2;O4)

◀ mO /MEDIA/XP/VIDEO:unlockDestination=OK

8.8.7. Setting the Signal Conversion Mode

> **ATTENTION!** The signal conversion can be set on the input and output ports as well, but setting the desired signal at the output port is recommended. The signal conversion on the input side is mainly for testing purposes.

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.Conversion=<conv_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.Conversion=<conv_mode>

Legend

Identifier	Parameter description	Parameter values
<conv_mode>	The video conversion mode	**OFF:** there is no signal conversion.
		420 *: the signal is converted to the indicated color depth.
		422: The signal is converted to the indicated color depth.
		LEFT and RIGHT *: The device supports vertical splitting of an HDMI 2.0 4K@60Hz 4:4:4 input signal to left and right halves allowing for the transmission of an 18Gbps HDMI2.0 signal over two HDMI1.4 compliant links. The two halves can then be recombined at the signal destination. To apply the feature route the same input signal to 2 output ports. Set the conversion to **LEFT** on one output port and **RIGHT** on the other output port.

*The availability of this property depends on the hardware version of the output board (V1x_) of the HDMI port. The hardware version can be found in Status Tab in the LDC or in the System Settings Menu, Device Info submenu in the LCD.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/SETTINGS.Conversion=OFF

◀ pw /MEDIA/PORTS/VIDEO/O1/SETTINGS.Conversion=OFF

8.8.8. Scrambling

HDMI 2.0 standard introduced scrambling to the TMDS encoding which helps to decrease the energy peaks and hence the Electro Magnetic Interference (EMI). To maintain backward compatibility, HDMI 2.0 only requires the use of scrambling with data rates of above 3.4 Gbps per lane.

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedScrambling=<scr_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedScrambling=<scr_mode>

Parameters

The option can be set on the output ports to **AUTO** / **ON** / **OFF**.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/SETTINGS.ForcedScrambling=AUTO

◀ pw /MEDIA/PORTS/VIDEO/O1/SETTINGS.ForcedScrambling=AUTO

8.8.9. Setting the HDCP Mode (Output Port)

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<On>/SETTINGS.HdcpMode=<HDCP_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<On>/SETTINGS.HdcpMode=<HDCP_mode>

Parameters

Identifier	Parameter description	Parameter values
<HDCP_mode>	The HDCP mode at the output port	**AUTO:** the setting is the same as on the input port. The encryption of the signal on the output is the same as on the input. **ALWAYS:** the outgoing signal is always encrypted on the output.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/SETTINGS.HdcpMode=AUTO

◀ pw /MEDIA/PORTS/VIDEO/O1/SETTINGS.HdcpMode=AUTO

8.8.10. Setting the Audio Mode

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/EMBEDDEDAUDIO.AudioMode=<audio_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<out>/EMBEDDEDAUDIO.AudioMode=<audio_mode>

Parameters

Identifier	Parameter description	Parameter values
<audio_mode>	The current audio mode	**OFF:** no audio in the video stream **HDMI:** the original audio is embedded in the video stream **ANALOG *:** the analog audio of the input port is embedded in the video stream *Analog audio properties appears only in **-Audio** suffixed models, where there is an analog audio port beside the HDMI port.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/EMBEDDEDAUDIO.AudioMode=OFF

◀ pw /MEDIA/PORTS/VIDEO/O1/EMBEDDEDAUDIO.AudioMode=OFF

INFO: In case of **-Audio** suffixed models, modifying the /MEDIA/PORTS/VIDEO/<out>/EMBEDDEDAUDIO.AudioMode=<audio_mode> property will change the /MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.AudioMode=<audio_mode> property.

8.8.11. Sending CEC Commands Towards the Sink

INFO: The hidden first 2x2 bit of the CEC command is static (always 40), it refers to the logical address of the sender and the addressee. **4:** sender is a **Playback Device 1**. ; **4:** the addressee is the **TV**.

8.8.11.1. Sending an OSD String

Sending the OSD string consists of two steps. First, set the **CEC.OsdString** property with the desired text, after that, call the **CEC.send(set_osd)** method.

Step 1 – Setting the CEC.OsdString Property

Command and Response

▶ SET·/MEDIA/PORTS/<out>/CEC.OsdString=<text>

◀ pw·/MEDIA/PORTS/<out>/CEC.OsdString=<text>

Parameters

The following characters are allowed in the text: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 14 characters.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/CEC.OsdString=Lightware

◀ pw /MEDIA/PORTS/VIDEO/O1/CEC.OsdString=Lightware

Step 2 – Calling the CEC.send(set_osd) Method

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:send(set_osd)

◀ mO·/MEDIA/PORTS/VIDEO/<out>/CEC:send=OK

Example

▶ CALL /MEDIA/PORTS/VIDEO/O1/CEC:send(set_osd)

◀ mO /MEDIA/PORTS/VIDEO/O1/CEC:send=OK

8.8.11.2. Sending a CEC Command in Text Format

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:send(<command>)

◀ mO·/MEDIA/PORTS/VIDEO/<out>/CEC:send=OK

Example

▶ CALL /MEDIA/PORTS/VIDEO/O1/CEC:send(power_on)

◀ mO /MEDIA/PORTS/VIDEO/O1/CEC:send=OK

The followings are accepted as a <command>:

image_view_on	standby	ok	back	up
down	left	right	root_menu	setup_menu
contents_menu	favorite_menu	media_top_menu	media_context_menu	number_0
number_1	number_2	number_3	number_4	number_5
number_6	number_7	number_8	number_9	dot
enter	clear	channel_up	channel_down	sound_select
input_select	display_info	power_legacy	page_up	page_down
volume_up	volume_down	mute_toggle	mute	unmute
play	stop	pause	record	rewind
fast_forward	eject	skip_forward	skip_backward	3d_mode
stop_record	pause_record	play_forward	play_reverse	select_next_media
select_media_1	select_media_2	select_media_3	select_media_4	select_media_5
power_toggle	power_on	power_off	stop_function	f1
f2	f3	f4		

8.8.11.3. Sending a CEC Command in Hexadecimal Format

Command and Response

▶ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:sendHex(<hex_command>)

◀ mO·/MEDIA/PORTS/VIDEO/<out>/CEC:sendHex=OK

Parameters

Accepted <hex_command> value is max. 30 character long (15 byte) in hexadecimal format. The codes are separated with a space character.

Example

▶ CALL /MEDIA/PORTS/VIDEO/O1/CEC:sendHex(87 00 E0 91)

◀ mO /MEDIA/PORTS/VIDEO/O1/CEC:sendHex=OK

8.9. Audio Output Port Settings

> INFO: The current setting can be queried by using the GET command in all cases.

8.9.1. Audio Mode Setting

> **DIFFERENCE!** Analog audio properties appears only in **-A or -Audio** suffixed models, where there is an analog audio port beside the HDMI port.

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.AudioMode=<audio_mode>

◀ pw·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.AudioMode=<audio_mode>

Parameters

Identifier	Parameter description	Parameter values
<audio_mode>	The audio working mode	**OFF:** Audio is present neither in the HDMI stream nor on the Analog Audio output port. **HDMI:** Audio is present only in the HDMI stream. **ANALOG:** Audio is present only on the Analog Audio output port. **HDMI+ANALOG:** Audio is present in the HDMI stream and on the Analog Audio output port.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.AudioMode=HDMI

◀ pw /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.AudioMode=HDMI

8.9.2. Analog Audio Output Level Settings

> **DIFFERENCE!** Analog audio properties appears only in **-A or -Audio** suffixed models, where there is an analog audio port beside the HDMI port.

8.9.2.1. Setting the Volume (Exact Value)

Command and Response

▶ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.VolumedB=<vol_value>

◀ pw·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.VolumedB=<vol_value>

Parameters

The <vol_value> parameter can be set between -95.62 dB and 0 dB.

Example

▶ SET /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.VolumedB=-10

◀ pw /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.VolumedB=-10.00

8.9.2.2. Setting the Volume (by Step Value)

Command and Response

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepVolumedB(<step_value>)

◂ mO·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepVolumedB=<step_value>

Example

▸ CALL /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO:stepVolumedB(-2)

◂ mO /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO:stepVolumedB=-2

The volume of the audio signal has been decreased by 2 dB. Positive and negative values are accepted.

▌ INFO: The Volume can also be set by the following method and property: **VolumePercent, StepVolumePercent.**

8.9.2.3. Setting the Balance (Exact Value)

Command and Response

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Balance=<bal_value>

◂ pw·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Balance=<bal_value>

Parameters

The <bal_value> parameter can be set between -100 and +100 (0=center, +100=right, -100=left).

Example

▸ SET /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.Balance=10

◂ pw /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.Balance=10

8.9.2.4. Setting the Balance (by Step Value)

Command and Response

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepBalance(<step_value>)

◂ mO·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepBalance=<step_value>

Example

▸ CALL /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO:stepBalance(-10)

◂ mO /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO:stepBalance=-10

The balance of the audio signal has been decreased (left channel became louder). Positive and negative values are accepted.

8.9.2.5. Setting the Mute State

Command and Response

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Mute=<mute_state>

◂ pw·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Mute=<mute_state>

Parameters

If the <mute_state> parameter is **0** (or **false**) the port is not muted. If the value is **1** (or **true**) the port is muted.

Example

▸ SET /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.Mute=true

◂ pw /MEDIA/PORTS/VIDEO/O1/ANALOGAUDIO.Mute=true

8.10. Preset Handling

The router can store presets and the followings are stored in each slot: input/output crosspoint state, muted/unmuted states. Preset loading has an effect on all ports, except the locked ones.

8.10.1. Creating a New Preset

Command and Response

▸ CALL·/MEDIA/PRESET:create(<preset_name>,VIDEO)

◂ mO·/MEDIA/PRESET:create=

Parameters

Up to 16 characters are allowed as <preset_name>. Letters (A-Z and a-z), hyphen (-), underscore (_), and numbers (0-9) are accepted. '**VIDEO**' is a mandatory parameter.

Example

▸ CALL /MEDIA/PRESET:create(My_pres,VIDEO)

◂ mO /MEDIA/PRESET:create=

Explanation

The preset is stored as a new node (My_pres) under the /MEDIA/PRESET/ node.

8.10.2. Saving the Settings to an Existing Preset

Command and Response

▸ CALL·/MEDIA/PRESET/<preset_name>:save(1)

◂ mO·/MEDIA/PRESET/<preset_name>:save=Ok

Example

▸ CALL /MEDIA/PRESET/My_pres:save(My_pres)

◂ mO /MEDIA/PRESET/My_pres:save=Ok

Explanation

The existing '**My_pres**' has been overwritten with the current settings.

8.10.3. Loading a Preset

Command and Response

▶ CALL·/MEDIA/PRESET/\<preset_name\>:load()

◀ mO·/MEDIA/PRESET/\<preset_name\>:load=Ok

Example

▶ CALL /MEDIA/PRESET/My_pres:load()

◀ mO /MEDIA/PRESET/My_pres:load=Ok

Explanation

'**My_pres**' preset has been loaded and applied.

8.10.4. Renaming a Preset

Command and Response

▶ CALL·/MEDIA/PRESET:rename(\<Old_name\>,\<New_name\>)

◀ mO·/MEDIA/PRESET:rename=

Example

▶ CALL /MEDIA/PRESET:rename(My_Pres,Your_Pres)

◀ mO /MEDIA/PRESET:rename=

Explanation

The preset has been renamed to '**Your_Pres**'.

8.11. RS-232 Port Settings

> INFO: The current setting can be queried by using the GET command.

8.11.1. Setting the Current Command Protocol

Command and Response

▶ SET·/MANAGEMENT/SERIAL.Protocol=\<prot_mode\>

◀ pw·/MANAGEMENT/SERIAL.Protocol=\<prot_mode\>

Parameters

Identifier	Parameter description	Parameter values
\<prot_mode\>	The applied protocol of the RS-232 port	**LW2:** Lightware Protocol #2 is applied. **LW3:** Lightware Protocol #3 is applied. **P#2:** The additional P#2 protocol is applied.

Example

▶ SET /MANAGEMENT/SERIAL.Protocol=LW3

◀ pw /MANAGEMENT/SERIAL.Protocol=LW3

8.11.2. Setting the Baud Rate

Command and Response

▶ SET·/MANAGEMENT/SERIAL.Baudrate=\<BAUD_value\>

◀ pw·/MANAGEMENT/SERIAL.Baudrate=\<BAUD_value\>

Parameters

The following values are accepted: 200, 300, 600, 1200, 1800, 2400, 4800, 9600, 19200, 38400, 57600, 115200.

Example

▶ SET /MANAGEMENT/SERIAL.Baudrate=57600

◀ pw /MANAGEMENT/SERIAL.Baudrate=57600

8.12. Network Settings

ATTENTION! When any parameter of the network settings is modified, always apply the new settings by calling the following method: **CALL /MANAGEMENT/NETWORK:applySettings()**

8.12.1. Querying the Current IP Address

Command and Response

‣ GET·/MANAGEMENT/NETWORK.IpAddress

◂ pr·/MANAGEMENT/NETWORK.IpAddress=<IP_address>

Example

‣ GET /MANAGEMENT/NETWORK.IpAddress

◂ pr /MANAGEMENT/NETWORK.IpAddress=192.168.0.101

‣ CALL /MANAGEMENT/NETWORK:applySettings()

◂ m0 /MANAGEMENT/NETWORK:applySettings=

8.12.2. Setting a Dynamic IP Address

Command and Response

‣ SET·/MANAGEMENT/NETWORK.DhcpEnabled=<DHCP_state>

◂ pw·/MANAGEMENT/NETWORK.DhcpEnabled=<DHCP_state>

Parameters

If the <DHCP_state> parameter is **0** (or **false**) the device is set to apply a static IP address. If the value is **1** (or **true**) the device is set to get a dynamic IP address from the DHCP server in the network.

Example

‣ SET /MANAGEMENT/NETWORK.DhcpEnabled=true

◂ pw /MANAGEMENT/NETWORK.DhcpEnabled=true

‣ CALL /MANAGEMENT/NETWORK:applySettings()

◂ m0 /MANAGEMENT/NETWORK:applySettings=

8.12.3. Static IP Address Settings

ATTENTION! To set a static IP address set the **DhcpEnabled** property to **false** – see the previous section.

8.12.3.1. Setting an IP address

Command and Response

‣ SET·/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

◂ pw·/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

Example

‣ SET /MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.80

◂ pw /MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.80

‣ CALL /MANAGEMENT/NETWORK:applySettings()

◂ m0 /MANAGEMENT/NETWORK:applySettings=

8.12.3.2. Subnet Mask Setting

Command and Response

‣ SET·/MANAGEMENT/NETWORK.StaticNetworkMask=<Net_mask>

◂ pw·/MANAGEMENT/NETWORK.StaticNetworkMask=<Net_mask>

Example

‣ SET /MANAGEMENT/NETWORK.StaticNetworkMask=255.255.0.0

◂ pw /MANAGEMENT/NETWORK.StaticNetworkMask=255.255.0.0

‣ CALL /MANAGEMENT/NETWORK:applySettings()

◂ m0 /MANAGEMENT/NETWORK:applySettings=

8.12.3.3. Gateway Setting

Command and Response

‣ SET·/MANAGEMENT/NETWORK.StaticGatewayAddress=<Gateway_address>

◂ pw·/MANAGEMENT/NETWORK.StaticGatewayAddress=<Gateway_address>

Example

‣ SET /MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.1

◂ pw /MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.1

‣ CALL /MANAGEMENT/NETWORK:applySettings()

◂ m0 /MANAGEMENT/NETWORK:applySettings=

8.13. EDID Management

8.13.1. Querying the Emulated EDIDs

Command and Response

▶ GET·/EDID.EdidStatus

◀ pr·/EDID.EdidStatus=<E1_EDID>;<E2_EDID>;...;<E8_EDID>

Parameters

The <E#_EDID> parameters mean the I1-I8 (E1-E8) input ports one after the other. The value of the parameter shows the location of the currently emulated EDID at the given input port.

Example

▶ GET /EDID.EdidStatus

◀ pr /EDID.EdidStatus=U1;U1;D2;D2;F49;F49;F49;F49

Explanation

The U1 (User) EDID is emulated on Input1 and Input 2. D2 (Dynamic) EDID is emulated on Input3 and Input4, and F49 (Factory) EDID is emulated on the other input ports.

8.13.2. Setting the Emulated EDID

Command and Response

▶ CALL·/EDID:switch(<Source>:<Destination>)

◀ mO·/EDID:switch=

Parameters

Identifier	Parameter description	Parameter values
<source>	Source EDID memory place	**F1-F148:** Factory presets. **D1-D8:** Dynamic EDID from the sink connected to the output port. **U1-U100:** User EDID memory.
<destination>	Emulated EDID memory place	**E1-E8:** The emulated EDID memory location of the input port.

Example

▶ CALL /EDID:switch(F49:E1;F29:E5)

◀ mO /EDID:switch=

8.13.3. Copying an EDID into the User EDID Memory

> **ATTENTION!** The (User) EDID memory slot will be overwritten without notification even if it was not empty.

Command and Response

▶ CALL·/EDID:copy(<source>:<destination>)

◀ mO·/EDID:copy=

Parameters

Identifier	Parameter description	Parameter values
<source>	Source EDID memory place	**F1-F148:** Factory presets. **D1-D8:** Dynamic EDID from the sink connected to the output port. **U1-U100:** User EDID memory.
<destination>	User EDID memory	**U1-U100:** The destination User EDID memory slot.

Example

▶ CALL /EDID:copy(D2:U5;D3:U6)

◀ mO /EDID:copy=

8.14. LW3 Commands – Quick Summary

System Commands

Querying the Product Name
  ▸ GET·/.ProductName

Setting the Device Label
  ▸ SET·/MANAGEMENT/UID/DeviceLabel=<Custom_name>

Querying the Serial Number
  ▸ GET·/.SerialNumber

Resetting the Matrix
  ▸ CALL·/SYS:softReset()

Restoring the Factory Default Settings
  ▸ CALL·/SYS:factoryDefaults()

Switching to Standby Mode
  ▸ CALL·/MANAGEMENT/POWER:standby()

Switching to Normal Mode
  ▸ CALL·/MANAGEMENT/POWER:wakeUp()

Switching and Crosspoint Settings

Query the Video Crosspoint State
  ▸ GET·/MEDIA/XP/VIDEO.DestinationConnectionStatus

Switching an Input to an Output
  ▸ CALL·/MEDIA/XP/VIDEO:switch(<in>:<out>)

Switching an Input to All Outputs
  ▸ CALL·/MEDIA/XP/VIDEO:switchAll(<in>)

Multiple Switching
  ▸ CALL·/MEDIA/XP/VIDEO:switchMulti(<out1_source>;<out2_source>;...;<out8_source>)

Video Input Port Settings (HDMI and DisplayPort)

Querying the Status of the Source Ports
  ▸ GET·/MEDIA/XP/VIDEO.SourcePortStatus

Muting an Input Port
  ▸ CALL·/MEDIA/XPVIDEO:muteSource(<in>)

Unmuting an Input Port
  ▸ CALL·/MEDIA/XP/VIDEO:unmuteSource(<in>)

Locking an Input Port
  ▸ CALL·/MEDIA/XP/VIDEO:lockSource(<in>)

Unlocking an Input Port
  ▸ CALL·/MEDIA/XP/VIDEO:unlockSource(<in>)

Setting the HDCP State
  ▸ SET·/MEDIA/PORTS/VIDEO/<in>/SETTINGS.HdcpVersion=<HDCP_ver>

Setting the Audio Mode
  ▸ SET·/MEDIA/PORTS/VIDEO/<in>/EMBEDDEDAUDIO.AudioMode=<audio_mode>

Sending CEC Commands Towards the Source

Sending an OSD String
  ▸ SET·/MEDIA/PORTS/<in>/CEC.OsdString=<text>
  ▸ CALL·/MEDIA/PORTS/VIDEO/<in>/CEC:send(set_osd)

Sending a CEC Command in Text Format
  ▸ CALL·/MEDIA/PORTS/VIDEO/<in>/CEC:send(<command>)

Sending a CEC Command in Hexadecimal Format
  ▸ CALL·/MEDIA/PORTS/VIDEO/<in>/CEC:sendHex(<hex_command>)

DisplayPort Input Settings

Setting the Maximum Lane Number
  ▸ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLaneCount=<lane>

Setting the Maximum Link Data Rate
  ▸ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.DpMaxLinkRate=<data_rate>

Enable the Test Pattern
  ▸ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.TpgMode=<tpg_status>

Setting the Conversion Mode
  ▸ SET·/MEDIA/PORTS/VIDEO/<input>/SETTINGS.Conversion=<conversion_mode>

Restart Link Training
  ▸ CALL·/MEDIA/PORTS/VIDEO/I1/SETTINGS:dpLinkTrain()

Audio Input Port Settings

Audio Mode Setting

▸ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.AudioMode=<audio_mode>

Setting the Balance (the Exact Value)

▸ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Balance=<bal_value>

Setting the Balance (by a Step Value)

▸ CALL·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO:stepBalance(<step_value>)

Setting the Mute State

▸ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Mute=<mute_state>

Setting the Gain

▸ SET·/MEDIA/PORTS/VIDEO/<in>/ANALOGAUDIO.Gain=<gain_value>

Video Output Port Settings

Querying the Status of the Output Ports

▸ GET·/MEDIA/XP/VIDEO.DestinationPortStatus

Setting the Signal Type (HDMI mode)

▸ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedSignalType=<sig_type>

Muting an Output

▸ CALL·/MEDIA/XP/VIDEO:muteDestination(<out>)

Unmuting an Output

▸ CALL·/MEDIA/XP/VIDEO:unmuteDestination(<out>)

Locking an Output

▸ CALL·/MEDIA/XP/VIDEO:lockDestination(<out>)

Unlocking an Output

▸ CALL·/MEDIA/XP/VIDEO:unlockDestination(<out>)

Setting the Signal Conversion Mode

▸ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.Conversion=<conv_mode>

Scrambling

▸ SET·/MEDIA/PORTS/VIDEO/<out>/SETTINGS.ForcedScrambling=<scr_mode>

Setting the HDCP Mode (Output Port)

▸ SET·/MEDIA/PORTS/VIDEO/<On>/SETTINGS.HdcpMode=<HDCP_mode>

Setting the Audio Mode

▸ SET·/MEDIA/PORTS/VIDEO/<out>/EMBEDDEDAUDIO.AudioMode=<audio_mode>

Sending an OSD String

▸ SET·/MEDIA/PORTS/<out>/CEC.OsdString=<text>

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:send(set_osd)

Sending a CEC Command in Text Format

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:send(<command>)

Sending a CEC Command in Hexadecimal Format

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/CEC:sendHex(<hex_command>)

Audio Output Port Settings

Audio Mode Setting

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.AudioMode=<audio_mode>

Analog Audio Output Level Settings

Setting the Volume (Exact Value)

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.VolumedB=<vol_value>

Setting the Volume (by Step Value)

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepVolumedB(<step_value>)

Setting the Balance (Exact Value)

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Balance=<bal_value>

Setting the Balance (by Step Value)

▸ CALL·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO:stepBalance(<step_value>)

Setting the Mute State

▸ SET·/MEDIA/PORTS/VIDEO/<out>/ANALOGAUDIO.Mute=<mute_state>

Preset Handling

Creating a New Preset

▸ CALL·/MEDIA/PRESET:create(<preset_name>,VIDEO)

Saving the Settings to an Existing Preset

▸ CALL·/MEDIA/PRESET/<preset_name>:save(1)

Loading a Preset

▸ CALL·/MEDIA/PRESET/<preset_name>:load()

Renaming a Preset

▸ CALL·/MEDIA/PRESET:rename(<Old_name>,<New_name>)

RS-232 Port Settings

Setting the Current Command Protocol

▸ SET·/MANAGEMENT/SERIAL.Protocol=<prot_mode>

Setting the Baud Rate

▸ SET·/MANAGEMENT/SERIAL.Baudrate=<BAUD_value>

Network Settings

Querying the Current IP Address

▸ GET·/MANAGEMENT/NETWORK.IpAddress

Setting a Dynamic IP Address

▸ SET·/MANAGEMENT/NETWORK.DhcpEnabled=<DHCP_state>

Setting a Static IP address

▸ SET·/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

Subnet Mask Setting

▸ SET·/MANAGEMENT/NETWORK.StaticNetworkMask=<Net_mask>

Gateway Setting

▸ SET·/MANAGEMENT/NETWORK.StaticGatewayAddress=<Gateway_address>

EDID Management

Querying the Emulated EDIDs

▸ GET·/EDID.EdidStatus

Setting the Emulated EDID

▸ CALL·/EDID:switch(<Source>:<Destination>)

Copying an EDID into the User EDID Memory

▸ CALL·/EDID:copy(<source>:<destination>)

9

Firmware Upgrade

This chapter is meant to help customers perform firmware upgrades on our products by giving a few tips on how to start and by explaining the features of the Lightware Device Updater v2 (LDU2) software. To get the latest software and firmware pack can be downloaded from www.lightware.com.

- ▶ BACKWARD COMPATIBILITY
- ▶ ABOUT THE FIRMWARE PACKAGE (LFP2 FILE)
- ▶ INSTALLATION
- ▶ FIRMWARE UPGRADING STEPS
- ▶ USE CASE STUDIES

9.1. Backward Compatibility

Up to 1.2.0 firmware version, the previous firmware packages are in **.lfp** format (LFP1 file), the upgrade can be done with Lightware Device Updater v1 (LDU1) software.

Above 1.2.0 firmware version, the firmware package format is **.lfp2** (LFP2 file) the upgrade can be done with Lightware Device Updater v2 (LDU2) software.

9.2. About the Firmware Package (LFP2 File)

The firmware files are packed in an LFP2 package. You need only this file to do the upgrade on your device.

- ▪ This allows using the same LFP2 package for different devices.
- ▪ The package contains all the necessary components, binary, and other files; You do not have to get further files.
- ▪ There is a descriptor file in the package that contains each firmware with version number and a list showing the compatible devices. The descriptor is displayed after loading the LFP2 file in the LDU2.

9.3. Installation

❚ **ATTENTION!** Minimum system requirement: 1 GB RAM.

Installation Modes

LDU2 has two installation modes: Normal and Snapshot.

Normal install	Snapshot install
Available for Windows and macOS	Available for Windows
The installer can update only this instance	Cannot be updated
Only one updateable instance can exist for all users	More than one different versions can be installed for all users

❚ **ATTENTION!** Using the Normal install as the default value is highly recommended.

Installation for Windows

Run the installer. If the User Account Control displays a pop-up message click **Yes**. During the installation you will be prompted to select the type of the installation:

Installation for macOS

Mount the DMG file with double clicking on it and drag the LDU2 icon over the Applications icon to copy the program into the Applications folder. If you want to copy the LDU2 into another location just drag the icon over the desired folder.

❚ INFO: The Windows and the Mac application has the same look and functionality.

9.4. Firmware Upgrading Steps

ATTENTION! While the firmware is being upgraded, the normal operation mode is suspended as the endpoint is switched to bootload mode. Signal processing is not performed. Do not interrupt the firmware upgrade. If any problem occurs, reboot the receiver and restart the process.

Step 1. Connect the computer to the same network as the matrix switchers are located. Run the LDU2 software. The discovered and known devices are being loaded.

Step 2. Select the firmware package file (*.lfp2). When the file is selected the release note is displayed in the right window. Please read it carefully.

Step 3. Press the **Open** button. The listed devices – which are compatible with the firmware pack – are filtered automatically in the main screen. **Parameters** button opens a window, where factory default restore can be chosen after the firmware upgrade. Press **Apply** to accept.

Step 4. Select the desired devices and press the **Start Update** button. The upgrade takes about 10-12 minutes to finish which is independent of the number of the upgraded devices since the upgrades are processed simultaneously.

Step 5. After the part of LDU2 software upgrade process is finished, the matrix starts the self-upgrade procedure. It is an automatic action and no any user interruption is needed during the operation (the crosspoint buttons show the status of the process).

Step 6. Finish. Clicking on the 📄 icon, a log information is displayed in the Device Log window.
10

Troubleshooting
Usually, if the system seems not to transport the signal as expected, the best strategy for troubleshooting is to check signal integrity through the whole signal chain starting from source side and moving forward to receiver end.

At first, check front panel LEDs and take the necessary steps according to their states. For more information about front panel LEDs of the matrix see Product Overview section.

LW3   Section to LW3 protocol commands.

10.1. Use Case Studies

Symptom	Root cause	Action	Refer to
Video signal			
No picture on the video output	Device(s) not powered properly	Check the matrix and the other devices if they are properly powered; try to unplug and reconnect them.	3.4
	Cable connection problem	Cables must fit very well, check all the connectors.	3.4
	No incoming signal	No video signal is present on the HDMI input ports. Check the source device and the HDMI cables.	3.4
	Not the proper video port is the active one	Check the video crosspoint settings.	4.2.1
			6.4
			LW2 7.3
			LW3 8.4.1
	Not the proper interface is the active one	If the source/display has more connectors, check if the proper interface is selected.	
	Output port is muted	Check the mute state of output ports.	6.6
			LW2 7.3.6
			LW3 8.8.1
	Display is not able to receive the video format	Check the emulated EDID and select another (e.g. emulate the display's EDID on the input port).	4.3.4
			6.8
			LW3 8.13
	HDCP is disabled	Enable HDCP on input port(s) of the matrix.	6.4.1
			LW3 8.5.6
No picture on the video output + signal error rate is high, HDMI2.0 scrambling is disabled, clock rate is set 1:10	The source sends 4K signals, but the emulated EDID is not supported this resolution.	Check the emulated EDID and select another (e.g. F139 EDID on the input port).	4.3.4
			6.8
			LW3 8.13

Symptom	Root cause	Action	Refer to	
Audio signal				
No audio is present on output	Other audio port is switched to the output	Check the audio crosspoint settings.	🖥️	4.2
			▦	6.4.1
			LW2	7.3.5
			LW3	8.7.1

	IP address conflict	Change the IP address to a not reserved one or enable DHCP if DHCP server exists in the network.	🖥️	4.3.1
			▦	6.9.2
			LW3	8.12

10.2. How to Speed Up the Troubleshooting Process

Lightware's technical support team is always working hard to provide the fastest support possible. Our team's response time is one of the best in the industry and in the toughest of cases we can directly consult with the hardware or software engineer who designed the product to get the information from the most reliable source.
However, the troubleshooting process can be even faster... with your help.

There are certain pieces of information that push us in the right direction to finding the root cause of the problem. If we receive most of this information in the first e-mail or it is gathered at the time when you call us, then there is a pretty high chance that we will be able to respond with the final solution right away.

This information is the following:

- Schematic (a pdf version is preferred, but a hand drawing is sufficient).
- Serial number(s) of the device(s) (it is either printed somewhere on the box or you can query it in the Device Controller software or on the built-in website).
- Firmware versions of the devices (please note that there may be multiple CPUs or controllers in the device and we need to know all of their firmware versions, a screenshot is the best option).
- Cable lengths and types (in our experience, it's usually the cable).
- Patch panels, gender changers or anything else in the signal path that can affect the transmission.
- Signal type (resolution, refresh rate, color space, deep color).
- Emulated EDID(s) (please save them as file and send them to us).
- Actions to take in order to re-create the problem (if we cannot reproduce the problem, it is hard for us to find the cause).
- Photo or video about the problem ('image noise' can mean many different things, it's better if we see it too).
- Error logs from the Device Controller software.
- In the case of Event Manager issue the event file and/or backup file from the Device Controller software.

The more of the above information you can give us the better. Please send these information to the Lightware Support Team (support@lightware.com) to speed up the troubleshooting process.

11

Technologies

The following sections contain descriptions and useful technical information how the devices work in the background. The content is based on experiences and cases we met in the practice. These sections help to understand features and technical standards like the followings:

‣ EDID MANAGEMENT
‣ HDCP MANAGEMENT
‣ PIXEL ACCURATE RECLOCKING
‣ SERIAL MANAGEMENT

11.1. EDID Management

11.1.1. Understanding the EDID

The Extended Display Identification Data (EDID) is the passport of display devices (monitors, TV sets, projectors). It contains information about the capabilities of the display, such as supported resolutions, refresh rates (these are called Detailed Timings), the type and manufacturer of the display device, etc.

After connecting a source to a display (DVI, HDMI, DP), the source reads out the EDID to determine the resolution and refresh rate of the image to be transmitted.
EDID Communication

Most DVI computer displays have 128-byte long EDID structure. However, Digital Televisions and HDMI capable displays may have another 128 bytes, which is called E-EDID and defined by CEA (Consumer Electronics Association). This extension contains information about additional Detailed Timings, audio capabilities, speaker allocation and HDMI capabilities. It is important to know that all HDMI capable devices must have CEA extension, but not all devices with CEA extension are HDMI capable.

Common Problems Related to EDID

Problem: "My system consists of the following: a computer, a Lightware device, a WUXGA (1920x1200) LCD monitor, and an SXGA (1280x1024) projector. I would like to see the same image on the monitor and the projector. What EDID should I choose on the Lightware device?"

Solution: If you want to see the image on both displays, you need to select the resolution of the smaller display (in this case SXGA), otherwise the smaller display may not show the higher resolution image.

Problem: "I have changed to a different EDID on an input port of the Lightware device to have a different resolution but nothing happens."

Solution: Some graphics cards and video sources read out the EDID only after power-up and later they do not sense that EDID has been changed. You need to restart your source to make it read out the EDID again.

11.1.2. Advanced EDID Management

Each DVI sink (e.g. monitors, projectors, plasma displays, etc...) must support the EDID data structure. Source BIOS and operating systems are likely to query the sink using DDC2B protocol to determine what pixel formats and interface are supported. DVI standard uses EDID data structure to identify the monitor type and capabilities. Most DVI sources (VGA cards, set top boxes, etc.) will output DVI signal after accepting the connected sink's EDID information. In the case of EDID readout failure or missing EDID, the source will not output DVI video signal.

Lightware devices provide the Advanced EDID Management function that helps system integration. The built-in EDID Router can store and emulate factory pre-programmed- and User programmable EDIDs. The EDID of the attached monitors or projectors for each output are stored in a non-volatile memory. This way the EDID of a monitor is available when the monitor is unplugged or switched off.

Any EDID can be emulated on any input. An emulated EDID can be copied from the EDID router's memory (static EDID emulation), or from the last attached monitor's memory (dynamic EDID emulation). For example, the Lightware device can be set up to emulate a sink device, which is connected to one of the outputs. In this case, the EDID automatically changes, if the monitor is replaced with another display device (as long as it has a valid EDID).

EDID is independently programmable for all inputs without affecting each other. All inputs have their own EDID circuit.

> INFO: The user is not required to disconnect the video cable to change an EDID as opposed to other manufacturer's products. EDID can be changed even if a source is connected to the input and powered ON.

> INFO: When EDID has been changed, the router toggles the HOTPLUG signal for 2 seconds. Some sources do not sense this signal. In such cases, the source device must be restarted or powered OFF and ON again.

11.2. HDCP Management

Lightware Visual Engineering is a legal HDCP adopter. Several functions have been developed which helps to solve HDCP related problems. Complex AV systems often have both HDCP and non-HDCP components. The matrix allows transmitting HDCP encrypted and unencrypted signals. The devices will be still HDCP compliant as they will never output an encrypted signal to a non-HDCP compliant display device. If an encrypted signal is switched to a non-compliant output, a blank (or red) screen alert or muted screen will appear.

11.2.1. Protected and Unprotected Content

Many video sources send HDCP protected signal if they detect that the sink is HDCP capable – even if the content is not copyrighted. This can cause trouble if an HDCP capable device is connected between the source and the display. In this case, the content cannot be viewed on non-HDCP capable displays and interfaces like event controllers. Rental and staging technicians often complain about certain laptops, which are always sending HDCP encrypted signals if the receiver device (display, matrix router, etc.) reports HDCP compliancy. However, HDCP encryption is not required all the time e.g. computer desktop image, certain laptops still do that.

To avoid unnecessary HDCP encryption, Lightware introduced the HDCP enabling/disabling function: the HDCP capability can be disabled in the Lightware device. If HDCP is disabled, the connected source will detect that the sink is not HDCP capable, and turn off authentication.

11.2.2. Disable Unnecessary Encryption

HDCP Compliant Sink

All the devices are HDCP-compliant, no manual setting is required, both protected and unprotected contents are transmitted and displayed on the sink.

Not HDCP-compliant Sink 1.

Non-HDCP compliant sink is connected to the matrix. Some sources (e.g. computers) always send HDCP encrypted signals if the receiver device reports HDCP compliancy, however, HDCP encryption is not required all the time (e.g. computer desktop image). If HDCP is enabled in the matrix, the image will not be displayed on the sink.

Setting the HDCP parameter to Auto on the output port and disable HDCP on the input port, the transmitted signal will not be encrypted if the content is not protected. Thus, non-HDCP compliant sinks will display non-encrypted signal.

Not HDCP-compliant Sink 2.

The layout is the same as in the previous case: non-HDCP compliant display device is connected to the matrix but the source would send protected content with encryption. If HDCP is enabled on the input port of the matrix, the source will send encrypted signal. The sink is not HDCP compliant, thus, it will not display the video signal (but blank/red/muted/etc. screen). If HDCP is disabled on the input port of the matrix, the source will not send the signal. The solution is to replace the display device to an HDCP-capable one.

11.2.3. HDCP v2.2

HDCP v2.2 is the latest evolution of copy protection. It is designed to create a secure connection between a source and a display. The 2.x version of HDCP is not a continuation of HDCPv1, and is rather a completely different link protection. One of the main differences is the number of the allowed devices within a closed A/V system: HDCP v2.2 allows 32 devices (HDCP v1.4 allows 128 devices). Further limit is that up to four level is allowed which means the protected signal can be transmitted over at most four repeater/matrix/switcher device. HDCP content protection is activated only if an active video stream is transmitted from the source to the display. The encryption is not activated without a video signal.

HDCP v2.2 standard allows to apply a previous version of HDCP (e.g. HDCP v1.4) between the source and the display if the source device allows it. According to the standard if the image content is protected with HDCP, the highest supported content protection level has to be applied. However, if the highest level of protection is not justified by the source content the level may be decreased to avoid compatibility problems; this case is determined by the source.

HDCP v2.2 Source and HDCP v1.4 Sink

In this case the signal of an HDCP v2.2 compliant source is switched to an HDCP v1.4 compliant sink device. The signal is encrypted with HDCP v2.2 on the input and encrypted with HDCP v1.4 on the output of the Lightware device. A lower level of encryption may be applied only if the source device/content allows it - according to the HDCP standard. In this case the HDCP setting on the input port has to be set to HDCP 1.4 and Depends on input on the output port.

HDCP v1.4 Source and HDCP v2.2 Sink

The below example is the reversal of the previous case. An HDCP v1.4 compliant source sends a signal with HDCP v1.4 encryption. The signal is switched to an HDCP v2.2 compliant sink device. In this case the outgoing signal has to be encrypted with the highest supported encryption level towards the sink, as the Lightware device and the sink are both HDCP v2.2 compliant. The HDCP v2.2 standard does not allow keeping the original HDCP v1.4 encryption level on the output.

HDCP 1.4   HDCP 2.2

HDCP 1.4 compliant source   MX2-8x8-HDMI20 series matrix   HDCP 2.2 compliant sink

What Kind of Signal Will be on the Output of the Lightware Device?

See below table that summarizes the possible cases:

Incoming Signal	HDCP v1.4 Compatible Sink on the Output	HDCP v2.2. Compatible Sink on the Output
HDCP v1.4	HDCP v1.4	HDCP v2.2
HDCP v2.2 (convertible) *	HDCP v1.4	HDCP v2.2
HDCP v2.2 (not convertible) *	Blank (or red) screen	HDCP v2.2

* Stream type 0: the video stream allows to convert the signal to apply a lower level of encryption.

** Stream type 1: the video stream does not allow to convert the signal.

11.3. Pixel Accurate Reclocking

Signal reclocking is an essential important procedure in digital signal transmission. After passing the reclocking circuit, the signal becomes stable, jitter-free, and can be transmitted over more equipment like processors, or event controllers. Without reclocking, sparkles, noise, and jaggies appear on the image.

Lightware's sophisticated Pixel Accurate Reclocking technology fixes more problems than general TMDS reclocking. It removes not only intra-pair skew but inter-pair skew as well. The Pixel Accurate Reclocking circuit eliminates the following errors:

Intra-pair skew

Skew between the + and - wires within a differential wire pair (e.g. Data2- and Data2+). It's caused by different wire lengths or slightly different wire construction (impedance mismatch) in DVI cable. It results in jitter.

Intra-pair skew
Inter-pair skew

Skew between two differential wire pairs in a cable. It is caused by different wire pair lengths or different number of twists in the DVI cable. Too much inter-pair skew results color shift in the picture or sync loss.

Inter-pair skew
**Jitter**

Signal instability in the time domain. The time difference between two signal transitions should be a fixed value, but noise and other effects cause variations.
Jitter

Noise

Electromagnetic interference between other electronic devices such as mobile phones, motors, etc. and the DVI cable are coupled onto the signal. Too much noise results in increased jitter.

Noise
11.4. Serial Management

11.4.1. General Information

There are two types of devices in general serial communication:

▪ **Data Terminal Equipment:** Data Terminal Equipment (DTE) is an end instrument that converts user information into signals or reconverts received signals. Typical DTE devices: computers, LCD touch panels and control systems.

▪ **Data Circuit-terminating Equipment:** Data Circuit-terminating Equipment (DCE) is a device that sits between the DTE and a data transmission circuit. It is also called data communication equipment and data carrier equipment. Typical DCE devices: projectors, industrial monitors and amplifiers.

Among others the pin assignment is different between DTE and DCE.

	DTE	DCE
Pin 2:	RD	TD
Pin 3:	TD	RD

RD: Received Data (digital input)
TD: Transmitted Data (digital output)

Different type of serial cables must be used between different serial devices.

	DTE	DCE
DTE	Null-modem	Straight
DCE	Straight	Null-modem *

* In general contact DCE with DCE by tail-circuit serial cable.

11.4.2. Types of Serial Cables

Straight Serial Cable	Null-modem Serial Cable
Straight pin-outs both ends.	Straight pin-out at the one end and cross pin-out at the other end (interchange lines of TX and RX).

Serial cables between devices may have male or female plugs and their type may be straight or null-modem in usual.

**ATTENTION!** The cable type does not depend on the plug type.

11.4.3. RS-232 Signal Transmission over MX2-HDMI20 Matrix switchers

The following examples describe the detailed integration of Lightware devices between different RS-232 pin assignment units.

INFO: **-R** suffixed models in MX2-HDMI20 series are supplied with D-SUB serial connector. These models are DCE units (according to their pinouts) with female plugs.

Extending RS-232 between DTE and DCE Third-party Devices

Connect straight serial cable between controller system (DTE) and the matrix (DCE).

Computer	MX2 Matrix Switcher
DTE	DCE
Pin 2: RD ◄	◄ Pin 2: TD
Pin 3: TD ►	► Pin 3: RD
RS-232 Connection Example between a Controller System and a Matrix Switcher

Extending RS-232 between DTE and DTE Third-party Devices

Connect a null-modem serial cable between a projector (DCE) an a matrix (DCE).

Appendix

12.1. Specifications

General

Compliance .... CE

EMI/EMC.............................IEC/EN 55035:2017, IEC/EN 55032:2015

Safety...IEC/EN 62368-1:2014

RoHS compliance ....Yes

Warranty ....3 years

Cooling............................. by cooling fans, air flows from front to rear

Operating temperature ....0 to +50 °C (+32 to +122°F)

Operating humidity ....10% to 90%, non-condensing

Power

Power source .... 100-240V AC, 50~60Hz

AC fuse F3.15A

Power consumption * - MX2-8x8-HDMI20-Audio, -L

(no signal / max).. 10 W / 75 W

Power consumption * - MX2-16x16-HDMI20(no signal / max. signal) 47 W / 83 W

Power consumption * - MX2-24x24-HDMI20

(no signal / max. signal).. 53 W / 108 W

* without 500 mA current, +5V on the HDMI output

Enclosure

Display .... Color LCD (320x240 pixels)

Rack mountable ....Yes, (rack ears supplied)

Material... 1 mm steel

Dimensions in mm - MX2-8x8-HDMI20-Audio ....

.... 442 (482 *) W x 43.7 H x 177.5 D

Dimensions in mm - MX2-8x8-HDMI20-Audio-L ....

.... 442 (482 *) W x 43.7 H x 277.4 D

Dimensions in mm - MX2-16x16-HDMI20-Audio, -Audio-R, -R ....

.... 441 (483 *) W x 132.6 H x 280.2 D

* with rack-mounting ears

Dimensions in mm - MX2-24x24-HDMI20-Audio, -Audio-R, -R..............

.... 440.5 (483 *) W x 177 H x 280.2 D

* with rack-mounting ears

Weight - MX2-8x8-HDMI20-Audio .... 3210 g

Weight - MX2-8x8-HDMI20-Audio-L... 3250 g

Weight - MX2-16x16-HDMI20-R .... 8540 g

Weight - MX2-24x24-HDMI20.. 9250 g

Weight - MX2-24x24-HDMI20-Audio-R .... 10090 g

Control Ports

Serial port connector in (-R suffixed models) .... D-SUB

Available Baud rates 9600, 19200, 38400, 57600, 115200

Serial port connector (in other models) ...... 3-pole Phoenix connector

Available Baud rates 9600, 19200, 38400, 57600, 115200

Control Ethernet (-R suffixed models) RJ45

Control Ethernet (in other models) .... Neutrik etherCon

HDMI Input/Output Ports

Port connector type ....19-pole HDMI type A receptacle

Standard ....DVI 1.0, HDMI 1.4, HDMI 2.0

Max. video resolution ....

.... 4096x2160@60Hz RGB 4:4:4 (up to 600MHz pixel clock)

.... 1920x1080@120 Hz, 36 bit

Audio formats .... all formats in line with HDMI 2.0 standard

Reclocking... Pixel Accurate Reclocking

HDCP compliant...Yes, HDCP 2.2

DP Input Ports

Port connector type .... 20-pole DisplayPort receptacle

Standard ....DVI 1.0, HDMI 1.4, HDMI 2.0, DP 1.2 (with

.... 18 Gbps bandwidth limitation)

Max. video resolution ....

.... 4096x2160@60Hz RGB 4:4:4 (up to 600MHz pixel clock)

.... 1920x1080@120 Hz, 36 bit

Audio formats .... all formats in line with HDMI 2.0 standard

Reclocking... Pixel Accurate Reclocking

HDCP compliant...Yes, HDCP 2.2

Audio Input/Output Ports

Signal transmission ....Balanced or Unbalanced audio

Gain (input)... from -12dB to +35 dB

EDID management

EDID emulation ....Yes

EDID memory .... 144 factory presets, 100 user-programmable

12.2. Factory Default Settings

| Parameter	Setting / Value
Network Settings	
IP address	Dynamic (DHCP is enabled)
RS-232 Port	
Port setting	57600 BAUD, 8, N, 1
Control protocol	LW3 protocol
General Video Settings	
Crosspoint setting	Input 1 on all outputs
Emulated EDID	F49 - (Universal HDMI, all audio formats with deep color support) on all inputs
HDMI port	
HDCP enable (input)	Allow HDCP 2.2 and HDCP 1.4
Audio source (input)	HDMI
HDCP (output)	Depends on input
Signal type (output)	Auto
Conversion mode (output)	Passthrough
Audio mode: HDMI port (output)	HDMI
Audio mode: HDMI with analog audio (output)	HDMI+ANALOG
Scrambling	Auto
TMDS clock rate	Auto
Signal type	Auto
DisplayPort	
HDCP enable (input)	Allow HDCP 2.2 and HDCP 1.4
Link data rate (input)	Max. HBR2 (5.4 Gbps)
Link lane count (input)	Max. 4 lane
Audio source (input)	DisplayPort
Audio Input/Output Ports	
Audio source	HDMI
Audio mode (HDMI out)	HDMI
Audio mode (Analog audio out)	HDMI+ANALOG
Analog audio output	Enabled (de-embedding from HDMI signal)
Analog Audio Input Levels	Balance: 0 (center) Gain: 0 dB
Analog Audio Output Levels	Balance: 0 (center) Volume: 0 dB

## 12.3. Mechanical Drawings

MX2-8x8-HDMI20-Audio
MX2-8x8-HDMI20-Audio-L

> INFO: MX2-4x4-HDMI20-CA, MX2-8x4-HDMI20-CA, MX2-8x8-HDMI20-L, -CA, MX2-8x8-DH-4DPi-A; MX2-8x8-DH-8DPi-A models have the same size.
MX2-16x16-HDMI20-Audio-R

INFO: The 2 RU-high models have the same size: MX2-16x16-HDMI20, -R, -Audio, -Audio-R; MX2-16x16-DH-8DPi-A-R

MX2-24x24-HDMI20-Audio-R

INFO: The 4 RU-high models have the same size: MX2-24x24-HDMI20, -R, -Audio, -Audio-R; MX2-24x24-DH-12DPi-R; -A-R

12.4. Direction of the Airflow

12.5. Wiring Guide for RS-232 Data Transmission

The MX2-HDMI20 series matrix switchers are built with 3-pole Phoenix connector. See the below examples of connecting to a DCE (Data Circuit-terminating Equipment) or a DTE (Data Terminal Equipment) type device:

Lightware device and a DCE
D-SUB 9 - Phoenix

TX RX

5   1
9   6

TX RX

1   5
6   9

2: RX data
3: TX data
5: Ground

12.7. Audio Cable Wiring Guide

Inputs and outputs of audio devices are symmetric or asymmetric. The main advantage of the symmetric lines is the better protection against the noise therefore, they are widely used in the professional audio industry. Symmetric audio is most often referred to as balanced audio, as opposed to asymmetric, which is referred to as unbalanced audio. Lightware products are usually built with 5-pole Phoenix connectors so we would like to help users assembling their own audio cables. See the most common cases below.

ATTENTION! Symmetric and asymmetric lines can be linked with passive accessories (e.g. special cables), but in this case half of the line level is lost.

ATTENTION! There are numerous types of regularly used connector and cable types to connect audio devices. Please always make sure that a connector or cable fits your system before use.

ATTENTION! Never join the phase-inverted (negative, cold or -) poles (either right and left) to the ground or to each other on the output side, as this can damage the unit.

INFO: Use a galvanic isolation in case of a ground loop.
The Pinout of the 5-pole Phoenix Connector
| Pin nr.	Signal
1	Left+
2	Left-
3	Ground
4	Right-
5	Right+

Compatible Plug Type

Phoenix® Combicon series (3.5mm pitch, 5-pole), type: MC 1.5/5-ST-3.5.
From Unbalanced Output to Balanced Input

2 x 6.3 (1/4") TS - Phoenix

2 x RCA - Phoenix

3.5 (1/8") TRS - Phoenix

From Balanced Output to Unbalanced Input

Phoenix - 2 x 6.3 (1/4") TS

Phoenix - 2 x RCA

Phoenix - 3.5 (1/8") TRS

From Balanced Output to Balanced Input

Phoenix - 2 x 6.3 (1/4") TRS

2 x 6.3 TRS (1/4") - Phoenix

Phoenix - 2 x XLR

2 x XLR - Phoenix

Phoenix - Phoenix
12.8. Factory EDID List

Mem.	Resolution	Type
F1	640 x 480 @ 60.00 Hz	D
F2	848 x 480 @ 60.00 Hz	D
F3	800 x 600 @ 60.32 Hz	D
F4	1024 x 768 @ 60.00 Hz	D
F5	1280 x 768 @ 50.00 Hz	D
F6	1280 x 768 @ 59.94 Hz	D
F7	1280 x 768 @ 75.00 Hz	D
F8	1360 x 768 @ 60.02 Hz	DR
F9	1280 x 1024 @ 50.00 Hz	D
F10	1280 x 1024 @ 60.02 Hz	D
F11	1280 x 1024 @ 75.02 Hz	D
F12	1400 x 1050 @ 50.00 Hz	D
F13	1400 x 1050 @ 60.00 Hz	D
F14	1400 x 1050 @ 75.00 Hz	D
F15	1680 x 1050 @ 60.00 Hz	D
F16	1920 x 1080 @ 50.00 Hz	D
F17	1920 x 1080 @ 60.00 Hz	D
F18	2048 x 1080 @ 50.00 Hz	D
F19	2048 x 1080 @ 60.00 Hz	D
F20	1600 x 1200 @ 50.00 Hz	D
F21	1600 x 1200 @ 60.00 Hz	D
F22	1920 x 1200 @ 50.00 Hz	D
F23	1920 x 1200 @ 59.56 Hz	D
F24	2048 x 1200 @ 59.96 Hz	D
F29	Universal DVI	
F30	1440 x 480 @ 60.05 Hz	H
F31	1440 x 576 @ 50.08 Hz	H

Mem.	Resolution	Type
F32	640 x 480 @ 59.95 Hz	H
F33	720 x 480 @ 59.94 Hz	H
F34	720 x 576 @ 50.00 Hz	H
F35	1280 x 720 @ 50.00 Hz	H
F36	1280 x 720 @ 60.00 Hz	H
F37	1920 x 1080 @ 50.04 Hz	H
F38	1920 x 1080 @ 50.00 Hz	H
F39	1920 x 1080 @ 60.05 Hz	H
F40	1920 x 1080 @ 60.05 Hz	H
F41	1920 x 1080 @ 24.00 Hz	H
F42	1920 x 1080 @ 25.00 Hz	H
F43	1920 x 1080 @ 30.00 Hz	H
F44	1920 x 1080 @ 50.00 Hz	H
F45	1920 x 1080 @ 60.00 Hz	H
F46	1920 x 1080 @ 60.00 Hz	H
F47	Universal HDMI with PCM audio	
F48	Universal HDMI with All audio	
F49	Universal HDMI, all audio, deep color	
F91	1024 x 2400 @ 60.01 Hz	H
F98	1280 x 720 @ 60.00 Hz	H
F99	1920 x 1080 @ 60.00 Hz	H
F100	1024 x 768 @ 60.00 Hz	H
F101	1280 x 1024 @ 50.00 Hz	H
F102	1280 x 1024 @ 60.02 Hz	H
F103	1280 x 1024 @ 75.02 Hz	H
F104	1600 x 1200 @ 50.00 Hz	H
F105	1600 x 1200 @ 60.00 Hz	H

Mem.	Resolution	Type
F106	1920 x 1200 @ 59.56 Hz	H
F107	2560 x 1440 @ 59.95 Hz	H
F108	2560 x 1600 @ 59.86 Hz	H
F109	3840 x 2400 @ 24.00 Hz	H
F110	3840 x 2160 @ 24.00 Hz	H
F111	3840 x 2160 @ 25.00 Hz	H
F112	3840 x 2160 @ 30.00 Hz	H
F118	Universal HDMI, 4K, PCM audio	
F119	Universal HDMI, 4K, all audio	
F120	3840 x 2160 @ 60.00 Hz	H
F121	1440 x 1080 @ 59.91 Hz	H
F122	2560 x 2048 @ 59.98 Hz	H
F123	1280 x 800 @ 59.91 Hz	H
F124	1440 x 900 @ 59.90 Hz	H
F125	1366 x 768 @ 60.00 Hz	H
F126	1600 x 900 @ 59.98 Hz	H
F127	2048 x 1080 @ 60.00 Hz	H
F128	2560 x 1080 @ 60.00 Hz	H
F129	3440 x 1440 @ 24.99 Hz	H
F130	3440 x 1440 @ 29.99 Hz	H
F131	4096 x 2160 @ 25.00 Hz	H
F132	4096 x 2160 @ 30.00 Hz	H
F133	4096 x 2160 @ 60.00 Hz	4:2:0
F134	3440 x 1440 @ 23.99 Hz	H
F135	4096 x 2160 @ 24.00 Hz	H
F136	3840 x 2400 @ 29.99 Hz	H
F137	3840 x 2160 @ 60.00 Hz	H2

Mem.	Resolution	Type
F138	3840 x 2160 @ 50.00 Hz	H2
F139	Universal HDMI 2.0, UHD, PCM audio	
F140	Universal HDMI 2.0, UHD, all audio	
F141	4096 x 2160 @ 60.00 Hz	4:4:4
F142	4096 x 2160 @ 50.00 Hz	4:4:4
F143	Universal HDMI 2.0, 4K, PCM audio	
F144	Universal HDMI 2.0, 4K, all audio	
F146	3840 x 2160 @ 60.00 Hz	HDR
F147	3840 x 2160 @ 60.00 Hz	RB, PCM
F148	3840 x 2160 @ 60.00 Hz	RB, ALL

Legend

- **D**: DVI EDID
- **H**: HDMI EDID
- **U**: Universal EDID (supporting many common EDIDs)
- **4:2:0**: EDID with chroma color subsampling
- **4:4:4**: EDID without color subsampling
- **H2**: HDMI2.0-compatible EDID
- **HDR**: EDID with High Dynamic Range mode support
- **RB**: Reduced blanking interval
- **PCM:** With PCM audio support
- **ALL:** All type of audio support (within the HDMI standard)

Please note that minor changes in the factory EDID list may be applied in farther firmware versions.

## 12.9. Front and Rear Views with Port Numbering

12.9.1. MX2-4x4-HDMI20-CA

| HDMI Input port nr.	HDMI Output port nr.	DP Input port nr.	DP Output port nr.	Audio Input port nr.	Audio Output port nr.
1-4	1-4	-	-	-	1-2

12.9.2. MX2-8x4-HDMI20-CA

| HDMI Input port nr.	HDMI Output port nr.	DP Input port nr.	DP Output port nr.	Audio Input port nr.	Audio Output port nr.
1-8	1-4	-	-	1-2	1-2

12.9.3. MX2-8x8-HDMI20-L

| HDMI Input port nr.	HDMI Output port nr.	DP Input port nr.	DP Output port nr.	Audio Input port nr.	Audio Output port nr.
1-8	1-8	-	-	-	-

12.9.4. MX2-8x8-HDMI20-CA

| HDMI Input port nr.	HDMI Output port nr.	DP Input port nr.	DP Output port nr.	Audio Input port nr.	Audio Output port nr.
1-8	1-8	-	-	1-2	1-2

12.9.5. MX2-8X8-HDMI20-Audio

13-24	1-24	1-12	-	9-12; 17-24	1-8

12.10. Firmware Release Notes

Below list shows the released firmware packages with important notes.

v1.4.2.b11

Release date: 2019-07-23

Bugfix:

- Fixed a bug that caused MX2-8x8-HDMI20-Audio (part number: 91310033) not to pass an input video signal of 4k@60Hz 4:4:4.
- Audio port submenus next to DisplayPort input ports were missing on the LCD screen in variant MX2-24x24-DH-12DPi-A-R
- Routing video signal from input 6 to output 6 and output 13 was unstable when the internal temperature has reached about 35-40 C. The issue was affecting only MX2-16x16-HDMI20(-AUDIO)(-R), MX2-24x24-HDMI20(-AUDIO)(-R), MX2-16x16-DH-8DPi-A-R, MX2-24x24-DH-12DPi-A-R and MX2-24x24-DH-12DPi-R variants.
- Fixed a bug that might have resulted in unusually long or failed upgrade.
- Fixed a bug that might have resulted in some components not to be upgraded properly during firmware upgrade.
- Input and output port firmware upgrade has been failed in MX2-8x8-HDMI20-AUDIO and MX2-8x8-HDMI20-AUDIO-L variants with v1.4.1 firmware.
- Firmware upgrade has been failed in some rare cases.
- Displayport input cards have truncated 10 and 12 bit deep color signals to 8 bit in every case.

v1.4.1b1

Release date: 2019-06-13

Bugfix:

- Fixed a bug that caused a DisplayPort input port not to send EDID information to the connected video source after a cold boot. EDID communication was OK after the input was switched to a different output.

v1.4.0b11

Release date: 2019-05-30

v1.3.5b2

Release date: 2019-03-22

Bugfix:

- Fixed a bug that resulted in uninformative popup message when the opened package requires newer version of LDU2.
- Fixed a bug that resulted in HDCP noise on the output when the HDCP 2.2 authentication had to be repeated on the corresponding output due to e.g. unplugging and replugging the HDMI cable.
- Fixed a bug that resulted in invalid frame rate and pixel frequency to be measured and reported.

v1.3.4b10

Release date: 2019-03-13

Bugfix:

- Fixed a bug that caused a 10 bit YUV 4:2:2 bit input format to be transmitted as 8 bit YUV 4:2:2 on the output.
- Fixed a bug that resulted in loss on the output port when a crosspoint change affecting the respective output occured and then the crosspoint state prior to the change was reset.
- Fixed a bug that caused the Audio menu on the LCD not to be displayed for certain input and output ports.
- Fixed a bug that resulted in the button panel of an MX2-16x16 or 24x24 matrix to be initialized as the button panel of an MX2-8x8 matrix, thus only the first 16 buttons were working.
- Fixed a bug that caused the input video signal not to be output on the output video port due to invalid signal parameters detection.

v1.3.3b2

Release date: 2019-01-17

Bugfix:

- Fixed a bug which had an effect on manufacturing the unit.

v1.3.2b2

Release date: 2018-11-22

Bugfix:

- Fixed a bug that resulted in the matrix switcher not being able to output an 4k@60Hz 4:2:0 signal.

v1.3.1b7

Release date: 2018-11-06

Bugfix:

- Fixed a bug that prevented the audio from being removed from the HDMI output when the Audio output parameter was set to Analog or Off.
- Fixed a bug that resulted in a ticking noise in the embedded audio when the volume was changed on the input.
- Fixed a bug that prevented the embedded audio from being de-embedded to the analog input when a 4k@60Hz 4:4:4 video with embedded LPCM audio was switched to an output port, and no HDMI sink (e.g. no display) was connected to the actual output.
- Fixed a bug that resulted in empty Port property window on MX2-8x8-HDMI20-Audio(-L).
- Fixed a bug that resulted in the sampling pattern conversion from 4:4:4 to 4:2:2 not to work for 4k@60Hz signals.
- Fixed a bug that prevented TMDSErrorCounter from being read by an attached sink on an output with HDMI1.4 signal.
- Fixed a bug that resulted in a ticking noise on the output when the volume is changed.

v1.3.0b21

Release date: 2018-10-29

New feature:

- Added support for MX2-16x16-HDMI20 and MX2-24x24-HDMI20 product variants.

v1.2.3b5

Release date: 2018-06-11

New feature:

▪ Added MX2-8x8-HDMI20-AUDIO-L frame support.

Bugfix:

▪ Fixed an issue that produced multiple hotplug pulses on the inputs. Although this does not violate the standard, it may cause compatibility issues with certain devices (like Barco Eventmaster).
▪ Fixed a bug that once in a while caused the connected input or output ports to show invalid pixel clock rates. If the output port is affected, the video does not appear on the connected display.

v1.2.2b10

Release date: 2018-03-28

Bugfix:

▪ Fixed a bug that might cause a video port to hang when the CEC I2C communication is slow (e.g. when using DP to HDMI adaptors).
▪ Fixed a bug that caused DDC communication to fail when the source was using clock stretching.

v1.2.1b4

Release date: 2017-12-18

New feature:

▪ New factory EDIDs have been added. F146 is an HDR EDID, F147 and F148 are 4k60 VESA-CVT RB EDIDs.

Bugfix:

▪ Fixed a bug that caused the matrix to be stuck in a reboot cycle when the internal database was corrupted by restoring the factory default settings.

v1.2.0b7

Release date: 2017-11-23

New feature:

▪ From this version on, the matrix supports CEC functionality.
▪ From this version on, the matrix will retry DDC communication when it fails after connecting a device to the output port.

Bugfix:

▪ Fixed a bug that caused the resolution not to be calculated properly for a 4:2:0 input video.
▪ Fixed a bug that caused the audio to be attenuated instead of being muted.

v1.1.6b3

Release date: 2017-09-04

New feature:

▪ Added the LW2 recall preset command (in the form of {%<preset>}) to the LW2 command pool where <preset> is the name of the preset to be recalled.
▪ Modified the input equalization settings to improve performance when a device is connected to the matrix by a short HDMI cable.

Bugfix:

▪ Fixed a bug that caused the Advanced tab on the IO ports panel not to be refreshed automatically upon parameter value changes.

v1.1.5b1

Release date: 2017-08-16

New feature:

▪ Added "High value mode" option to inputs. This mode prevents HDCP1.x sinks from interacting with sources producing high value HDCP 2.2 protected content.
▪ The 'Signal error rate' field of the Port property panel has been moved to the 'Advanced' tab.
▪ We have added a new option (High Value mode) to the HDCP enable field on the Port properties panel.
▪ We have added tooltip for the HDCP Enable field on the Port properties panel.
▪ We have updated the HDCP capability field on Port properties panel of output ports to display more detailed information.
▪ We have added a new 'Advanced' tab to the Port properties panel with the following new fields: BCH ECC errors (input ports only), Infoframes, Scrambling, Clock rate.
▪ Added HDCP "High Value mode" to LCD menu.

Bugfix:

▪ We have fixed a bug that prevented the pin of slider control elements to be dragged by mouse.
▪ We have removed the Conversion mode field from the Port properties panel of input ports as the device now allows conversion on output ports only.
▪ We have fixed the bug that the EDID Creator failed to create correct binary files during saving.

v1.1.4b6

Release date: 2017-07-31

New feature:

- We are introducing a subpage at http://<matrix_ip_address>/log that allows to retrieve log files from the matrix.

Bugfix:

- Fixed a bug that prevented the LW2 switch command from being executed.
- Improved IO port firmware update stability.
- Fixed a bug that caused no picture after an EDID switch on the input.
- Fixed stability issues with HDCP 1.4 capable displays.
- Fixed a bug that prevented some sources from authenticating via HDCP 1.4.
- Fixed a bug that caused v13 version of the input board to malfunction during Hot Plug Detect.

v1.1.3b1

Release date: 2017-04-26

Bugfix:

- Fixed a bug that resulted in missing TMDS error rate indicators for some ports.
- Improved crosspoint input equalization.

v1.1.2b4

Release date: 2017-03-17

Bugfix:

- Fixed a bug that resulted in the content of the front panel LCD display to be mirrored.
- Fixed a bug that caused the TCP control connection to be closed unexpectedly by the matrix. After the TCP connection was closed, control could only be regained by power cycling the matrix.

v1.1.1b4

Release date: 2017-03-09

Bugfix:

- Fixed a bug that caused the error registers on the output not to be cleared correctly resulting in false content in the logs.
- Fixed a bug that prevented the internal buzzer from being disabled.
- Fixed a bug that caused the time and date not to be preserved when the unit was power cycled.
- Fixed a bug that limited the number of retry attempts to three when authentication of the attached display failed.
- Fixed a bug that caused some HDCP 1.4 repeaters (e.g. some AV receivers) not to be authenticated properly.
- Fixed a bug that prevented the Lightware Protocol 2 switch command from working.
- Fixed a bug that caused some displays not to authenticate correctly when they were switched on after being connected to the matrix.
- Fixed a bug where the input port mute caused permanent signal loss on the input with HDCP2.2 contents.
- Fixed a bug resulting in the 4:4:4 to 4:2:0 conversion option to remain active when the sampling pattern of the input signal was 4:2:0.
- Fixed a bug that caused the red picture on the display indicating that it was not able to decrypt HDCP-encrypted content to flash when HDCP 2.2 content encryption was used.
- Fixed a bug that caused compatibility issues with non-HDMI2.0 products resulting in inappropriate EDID reading.

v1.1.0b3

Release date: 2017-01-31

New feature:

- We are introducing automatic fan speed control. Now the fan speed is set according to the system temperature.
- From this version on, HDCP 2.2 is supported by the matrix.
- We are introducing support for saving and loading presets. Presets are used to store crosspoint settings and Mute state for ports. Current lock state is reserved when loading a preset.
- We are introducing front panel USB support. The front panel USB connector can now be used for connecting the matrix to a controller computer running the Lightware Device Controller.

v1.0.1b1

Release date: 2016-12-02

Bugfix:

- Fixed a bug that caused the IPv6 address not to be displayed in LDC for the first time.

v1.0.0b1

Release date: 2016-11-20

12.11. Further Information

Limited Warranty Statement

1. Lightware Visual Engineering LLC (Lightware) warrants to all trade and end user customers that any Lightware product purchased will be free from manufacturing defects in both material and workmanship for three (3) years from purchase unless stated otherwise below. The warranty period will begin on the latest possible date where proof of purchase/delivery can be provided by the customer. In the event that no proof can be provided (empty 'Date of purchase' field or a copy of invoice), the warranty period will begin from the point of delivery from Lightware.

1.1. 25G and MODEX product series will be subject to a seven (7) year warranty period under the same terms as outlined in this document.

1.2. If during the first three (3) months of purchase, the customer is unhappy with any aspect of a Lightware product, Lightware will accept a return for full credit.

1.3. Any product that fails in the first six (6) months of the warranty period will automatically be eligible for replacement and advanced replacement where available. Any replacements provided will be warranted for the remainder of the original unit's warranty period.

1.4. Product failures from six (6) months to the end of the warranty period will either be repaired or replaced at the discretion of Lightware. If Lightware chooses to replace the product then the replacement will be warranted for the remainder of the original unit's warranty period.

2. The above-stated warranty and procedures will not apply to any product that has been:

2.1. Modified, repaired or altered by anyone other than a certified Lightware engineer unless expressly agreed beforehand.

2.2. Used in any application other than that for which it was intended.

2.3. Subjected to any mechanical or electrical abuse or accidental damage.

2.4. Any costs incurred for repair/replacement of goods that fall into the above categories (2.1., 2.2., 2.3.) will be borne by the customer at a pre-agreed figure.

3. All products to be returned to Lightware require a return material authorization number (RMA) prior to shipment and this number must be clearly marked on the box. If an RMA number is not obtained or is not clearly marked on the box, Lightware will refuse the shipment.

3.1. The customer will be responsible for in-bound and Lightware will be responsible for out-bound shipping costs.

3.2. Newly repaired or replaced products will be warranted to the end of the originally purchased products warranty period.

Document Revision History

	Release date	Changes	Editor
1.0	20-12-2016	Initial Version	Laszlo Zsedenyi
2.8	31-07-2019	Add front and rear view drawings with port numbering to Appendix	Judit Barsony
