

Razor Pro VESA Mount

Overview

The Razor Pro VESA Mount allows a single DVS Razor Pro to be fitted to either a 100x100 or 75x75 standard VESA mount. It is recommended to mount the Razor Pro with the rear of the unit horizontal, or facing upwards. This allows the hot air generated by the unit to dissipate more efficiently. The unit must have a decent airflow to also aid in cooling the unit.
